Industry Feedback on Curriculum 2026-2027

The industry are the most important stakeholders of B.Tech. Computer Science and Engineering (Cyber Security) Programme. Suggestions collected in the form of structured feedback from the industries. We have received 5 feedbacks from industry experts on curriculum and the major suggestions are listed below:

1. Industry experts recommended the course "Programming using JAVA" by emphasizing practical coding proficiency, object-oriented design, and real-time application development. Focus on hands-on programming, debugging, and efficient coding practices will enhance students' readiness for roles such as software developer and application engineer.
2. Experts suggested integrating industry-oriented programming practices such as code optimization, version control, and collaborative development in JAVA. Inclusion of real-world case studies and mini-projects will help students improve problem-solving skills and adapt to professional development environments.
3. Industry professionals recommended the course "Computer Networks" by focusing on practical knowledge of networking concepts, including network configuration, troubleshooting, and performance analysis aligned with current industry practices.
4. Experts emphasized the use of network simulation and configuration tools such as Cisco Packet Tracer, along with real-time networking scenarios, to provide hands-on experience. Industry-led sessions, workshops, and exposure to certification-oriented training were suggested to bridge the gap between academic learning and industry expectations.

The following subjects are proposed by the Industry Members,

SNO	COURSE NAME	CATEGORY
1	Programming using JAVA	Program Core
2	Computer Networks	Program Core

HOD / CSE (CS)

DEAN / SOC

Department of Computer Science & Engineering (Cyber Security)

Faculty Feedback on Curriculum 2026-2027

The faculty members are the most important key contributors of the B.Tech. Computer Science and Engineering (Cyber Security) Programme. In the academic year 2025–2026, suggestions were collected in the form of structured feedback from B.Tech CSE (Cyber Security) faculty members. Received seven faculty feedback on curriculum and the major suggestions are listed below:

1. Recommended the course "Programming using JAVA" by emphasizing hands-on coding, real-time application development, and advanced programming concepts such as multithreading and file handling. This approach will enhance students' practical coding abilities and prepare them for roles such as software developer, backend engineer, and application programmer.
2. Proposed the course "Computer Networks" through practical demonstrations, simulation-based learning, and real-world networking scenarios. This will help students gain deeper understanding of network concepts and prepare them for roles such as network engineer, system administrator, and cybersecurity analyst.
3. Suggested the course "Database Management Systems" by incorporating intensive lab exercises on SQL queries, database design, normalization, and real-time data handling scenarios. This will improve students' ability to manage and analyze data efficiently, supporting roles such as database administrator, data analyst, and data engineer.
4. Recommended the course "Advanced Data Structures" by integrating problem-solving sessions, algorithm implementation, and complexity analysis using real-time and competitive programming challenges. This will strengthen analytical thinking and prepare students for roles such as software engineer, algorithm designer, and system developer.

Parents Feedback on Curriculum 2026-2027

The parents are the most important stakeholders of B.Tech. Computer Science and Engineering (Cyber Security) Programme. Suggestions collected in the form of structured feedback from the parents. We have received 5 feedbacks from parents on curriculum and the major suggestions are listed below:

1. Parents emphasized the importance of providing strong practical exposure in programming. They suggested focusing on hands-on training and real-time applications to improve students' coding skills and employability in software-related roles.
2. Parents recommended that the course should include practical learning methods, such as demonstrations and real-world examples, to help students better understand networking concepts and enhance their readiness for industry roles.
3. It was suggested that students should be given more practice-oriented learning, including SQL and database handling, to strengthen their ability to manage and work with data effectively in real-world situations.
4. Parents highlighted the need for improving students' problem-solving and analytical skills by including more exercises, coding practice, and real-time problem scenarios, which are essential for technical job roles, better prepared for placements and professional responsibilities after graduation.

The following subjects are proposed by the Parents,

SNO	COURSE NAME	CATEGORY
1	Programming using JAVA	Program Core
2	Computer Networks	Program Core
3	Database Management Systems	Program Core
4	Advanced Data Structures	Program Core

HOD / CSE (CS)

Dr. Rajendran T
Head of the Department
CSE (Cyber Security)

Vel Tech

Suggested to include placement oriented courses.

Students Feedback

School of Computing
Department of Computer Science & Engineering (Cyber Security)
Students Feedback on Curriculum 2026-2027

The students are the most important stakeholders of B.Tech. Computer Science and Engineering (Cyber Security) Programme. In the academic year 2025 - 2026, suggestions collected in the form of structured feedback from B. Tech CSE (Cyber Security) students. Received 125 students feedback on curriculum and the major suggestions are listed below:

- Proposed practical sessions in "Computer Networks" to improve understanding of networking concepts through simulations, real-time configurations, and troubleshooting activities.
- Suggested more coding and problem-solving exercises in "Advanced Data Structures" to strengthen algorithmic thinking and improve performance in technical interviews and competitive programming.
- Requested real-time applications and case studies in both subjects to bridge the gap between theoretical knowledge and practical implementation.
- Recommended integrating industry-relevant skills and tools to better prepare students for real-world job roles and challenges.
- Suggested providing additional learning resources, including curated online materials and video lectures, to support self-learning and concept understanding.

The following questions are given to the students about feedback on curriculum and the response is mentioned in the below graph:

Q1	How do you rate the teaching resources for your learning?
Q2	How do you rate the laboratory facilities provided by the institute?
Q3	How do you rate the faculty support for your learning?
Q4	How do you rate the mentoring system of the Institution?
Q5	What extent have you acquired necessary technical through your courses?

Q6	What extent have you acquired necessary soft skills through your courses?
Q7	How do you rate the practical/hands-on experience provided in the curriculum?
Q8	How effective were the projects in simulating real life experiences?
Q9	How do you rate the level of readiness for industry roles and challenges after graduation?
Q10	How do you evaluate the career guidance provided during your studies?
Q11	To what extent do you feel that the curriculum meets your professional needs?
Q12	How satisfied are you with our examinations system?

The student feedback collected from 125 respondents across 12 survey questions indicates a high level of overall satisfaction with the academic delivery, curriculum design, and institutional support for the courses Computer Networks and Advanced Data Structures. A majority of responses fall under the "Extremely High" and "High" categories, particularly for questions related to technical skill acquisition (Q5), problem-solving ability (Q6), practical experience (Q7), and industry readiness (Q9). This clearly reflects the effectiveness of these courses in strengthening students' core technical and analytical competencies.

Feedback related to teaching resources (Q1), laboratory facilities (Q2), faculty support (Q3), mentoring system (Q4), and curriculum relevance (Q11) is also highly encouraging, with students expressing strong satisfaction in these areas. The responses highlight the institution's commitment to providing a supportive learning environment and quality academic resources.

Parameters such as hands-on experience (Q7) and assignment effectiveness (Q8) have received positive recognition, demonstrating that students are benefiting from practical and application-oriented learning approaches. Similarly, feedback on academic guidance (Q10) reflects constructive engagement between faculty and students, contributing to improved learning outcomes and career preparedness.

The feedback on the examination system (Q12) is also favorable, with most students expressing satisfaction with the assessment process. The presence of minimal "Extremely Low" responses further indicates that overall student perception is highly positive and consistent across all parameters.

The following subjects are proposed by the Student Members,
