

SCHOOL OF ELECTRICAL AND COMMUNICATION

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

VTR UGE 2021 CURRICULUM

Department of Electronics and Communication Engineering

Vision of the Department

To be a centre of academic excellence through quality education and cutting-edge research in the diversified fields of electronics and communication engineering to meet the global challenges and produce high quality professionals

Mission of the Department

M1. To enrich the knowledge of graduate engineers for global requirements by promoting quality education through innovative pedagogical practices

M2. To create an ambience of academic excellence by engaging in cutting-edge research and undertaking collaborative projects with academia and industry

M3. To develop competence by inculcating human and moral values with leadership and professional skills

Programme Educational Objectives:

PEO1. Our graduates will have in depth knowledge in mathematical and engineering concepts required to solve engineering problems in the analysis and design of Electronics and Communication Devices and Systems

PEO2. Our graduates will have the expertise to conceive, design, implement and operate the Engineering products for the societal and environmental problems

PEO3. Our graduates will have adequate technical skills and leadership qualities in the development of innovative solutions required in core and allied industries

PEO4. Our graduates will adapt to multidisciplinary environment using evolving technologies and achieve professional competence through higher education, research and lifelong learning

PEO5. Our graduates will communicate effectively, practice and promote ethical, environmental, health and safety standards in their profession

Programme Outcomes (POs)

Engineering graduates will be able to:

PO1: Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2: Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3: Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4: Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5: Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6: The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7: Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8: Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9: Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10: Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11: Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes (PSOs)

On Successful Completion of the program, the graduates will be able to

PSO1: Apply the knowledge of Electronics and Communication engineering to develop CDIO framework using modern Engineering hardware and software tools to meet societal and industrial needs.

PSO2: Design and develop smart systems using Artificial Intelligence, Data Science and cybersecurity technologies.

COURSE CODE	COURSE TITLE	L	Т	Р	С
10211EC101	CIRCUIT THEORY	2	1	0	3

Program Core

b) Preamble :

The course deals with the analysis of circuits through Graph theory, Network theorems, Fundamentals of AC circuit analysis, concepts of resonance, transients through differential equations and two port networks.

c) Prerequisite :

Nil

d) Related Courses :

Electromagnetics and Transmission Lines

e) Course Outcomes:

On successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on revised Bloom's Taxonomy)
CO1	Infer the basics of circuit analysis and graph theory	K2
CO2	Interpret circuits using network theorems	K2
CO3	Solve the problems on RL, RC and RLC DC transient circuits	К3
CO4	Discuss the characteristics of AC steady state analysis and power analysis.	К2
CO5	Illustrate the parameters of the two port networks and the concepts of resonance	K2

COs	PO 1	PO 2	PO 3	РО 4	РО 5	PO 6	РО 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	Н	Н	L	-	-	L	L	-	-	М	Н	L	L	-
CO2	Н	Н	L	-	-	L	L	-	-	М	Н	L	L	L
CO3	М	М	L	-	-	-	М	-	-	М	М	L	L	L
CO4	Н	Н	L	-	-	-	-	-	-	М	М	L	L	L
CO5	М	М	L	-	-	М	-	-	-	М	М	L	L	L

f) Correlation of COs with POs and PSOs:

g) Course Content:

UNIT I BASICS OF CIRCUIT ANALYSIS & GRAPH THEORY

Review of KCL, KVL, Node and Mesh Analysis; Analysis using dependent current sources and voltage source, Resistors in series and parallel – Voltage and Current division rule, Graph Theory: Incidence- Duality & Dual networks

UNIT II NETWORK THEOREMS

Source Transformation – Superposition Theorem – Thevenin's Theorem – Norton's Theorem – Maximum Power Transfer Theorem – Reciprocity Theorem

UNIT III DC TRANSIENT ANALYSIS

RL and RC Circuits: Source free circuit – Properties of Exponential Response and Step functions – Natural and Forced Response Driven RL and RC circuits – RLC Circuits: Source free damped and under damped parallel RLC circuit – Critical Damping – Source free series RLC–Complete Response and lossless Circuits.

UNIT IV AC STEADY STATE AND POWER ANALYSIS

Analysis of AC steady state circuits: Characteristics, Forced Response to Sinusoidal functions, Phasor Relationship to passive components – Impedance and admittance – Application of Network Theorems – Power Analysis: Instantaneous – Average and RMS- Power, Power factor and Energy.

UNIT V TWO PORT NETWORKS AND RESONANCE CIRCUITS

Two port Networks – Impedance Parameter – Admittance Parameter – Transmission parameter, Hybrid Parameters and their inter relationship – Series and parallel resonance: frequency response, Quality factor and Bandwidth

Course Code	Course Title	L	Т	Р	С
10211EC102	ANALOG ELECTRONICS	2	1	0	3

Program Core

b) Preamble

This course provides the basic and design knowledge about electronic circuit analysis using BJT and MOSFET which involves feedback, oscillator, high frequency amplifiers and its applications

c) Prerequisite

Nil

d) Related Courses

Linear Integrated Circuits, Communication Systems.

e) Course Outcomes

On successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the operation of basic semiconductor and its devices.	K2
CO2	Compare the performance of different biasing types used for transistor operation.	K2
CO3	Apply the 'h' parameters and small signal model for different transistor configuration	K3
CO4	Interpret the effect of feedback, feedback amplifier and oscillators	K2
CO5	Illustrate the various types of tuned and power amplifiers.	K2

	PO1	PO2	PO3	PO4	PO5	PO6	PO 7	PO8	PO9	PO10	PO11	PO12	PSO 1	PSO 2

CO5	М	М	L	-	Н	-	-	-	L	М	М	L	L	-

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I SEMICONDUCTOR DEVICES

Overview of semiconductor, PN Diode : Varactor diode, LED, PIN diode and Laser diode-Working principle and application of Zener diode - Rectifiers-Clipper and clamper-Basic principle and working of SCR, UJT.

UNIT II DC BIASING OF TRANSISTOR

Introduction–Working principle of BJT-Transistor characteristics-CB, CE, CC -Thermal runaway, DC Biasing-BJT: Fixed -Emitter-Stabilized-Voltage-Divider - Compensation techniques.

UNIT III TRANSISTOR AMPLIFIER

Two port system approach, The Hybrid Equivalent model, Approximate Hybrid equivalent circuit, Hybrid Π model: CE, CC and CB configurations

UNIT IV FEEDBACK AMPLIFIER AND OSCILLATORS

Basic concept of Feedback, Feedback connection types, Input and output impedance of feedback configurations - characteristics of negative feedback, Oscillators: Principles of sinusoidal oscillator - RC oscillators: phase shift, Wien bridge - LC oscillators: Hartley, Colpitts, crystal oscillator.

UNIT V TUNED AND POWER AMPLIFIERS

Tuned amplifier: single tuned, double tuned and stagger tuned amplifier - Power amplifiers: Transformer coupled Class A power amplifier, Class B amplifier operation, Transformer coupled Push-pull circuits, Complimentary symmetry circuits, Class C power amplifier.

similar 1 A. Selwin Mic

Course Code	Course Title	L	Т	Р	С
10211EC103	DIGITAL ELECTRONICS	3	0	0	3

Program Core

b) Preamble

The primary aim of this course is to understand the fundamental behind digital logic design and gain experience in using them for meeting any design specification. The course includes fundamentals of Boolean algebra, combinational and sequential circuits and introduction to HDL.

c) Prerequisite

Nil

d) Related Courses

Microprocessor and Microcontroller, VLSI design

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Basedon Revised Bloom's Taxonomy)
CO1	Interpret the concept of boolean minimization techniques and HDL in digital circuits	K2
CO2	Construct the combinational circuits such as encoder, multiplexer and write HDL program for this circuits	K3
CO3	Utilize the concept of sequential circuits such as counters, shift registers and write HDL program for this circuits	K3
CO4	Solve asynchronous sequential circuits for simple application	K3
CO5	Explain the applications of digital electronics	K2

CO5	Н	L	М	L	-	М	-	-	-	-	L	-	L	L

f) Correlation of COs with POs and PSOs

g) Course Content

UNITI DIGITAL SYSTEM FUNDAMENTALS

Number System; Boolean algebra and Switching Functions; Boolean Minimization using K Map and Tabulation method-NAND and NOR Realization- Introduction to Verilog – Structural, Dataflow and Behavioral modeling.

UNITII COMBINATIONAL CIRCUITS

Design procedure – Half adder – Full Adder – Half subtractor – Full subtractor – Parallel binary adder/ Subtractor - Carry Look Ahead adder – Serial Adder/Subtractor – BCD adder – Binary Multiplier – Binary Divider – Multiplexer/ Demultiplexer – decoder – encoder – parity checker – parity generators – code converters – Magnitude Comparator , Structural, Dataflow and Behavioral modeling of combinational logic circuits (Multiplexer, Demultiplexer, decoder and encoder).

UNITIII SEQUENTIAL CIRCUITS

Flip Flops and Memory devices: RAM – Static and Dynamic, ROM, PROM, EPROM, EEPROM; Counters and Shift registers: Binary, BCD and programmable modulo counters, Shift register counters; Sequential circuit design: using Mealy and Moore model. Structural, Dataflow and Behavioral modeling of sequential logic circuits (counters and shift registers)

UNITIV ASYNCHRONOUS SEQUENTIAL CIRCUITS

Analysis Procedure, Circuits with latches; Design Procedure, Reduction of state and flow table; Race free state assignment; Hazards; ASM chart; Design examples

UNITV APPLICATIONS OF DIGITAL ELECTRONICS

Multiplexing displays – Frequency counters – Time measurements – Using the ADC0804: Standalone operation, span adjust, zero shift, testing – microprocessor compatible A/D converters.

Total: 45 Hrs

g) Course Content

UNIT I CHARACTERISTICS OF OP-AMP

Integrated Circuits- Classification of ICs - Op Amp: Ideal Characteristics Internal Circuit-Differential Amplifier-Open loop and Closed loop configuration-DC Characteristics and AC Characteristics - Current Source: Widlar source, Frequency Compensation

UNIT II LINEAR AND NON-LINEAR OP-AMP CIRCUITS

Linear: Inverting and Non-inverting voltage amplifiers, summing, scaling and averaging amplifiers, Subtractor, voltage follower, Instrumentation amplifiers, V to I and I to V converters, Non Linear: Differentiators, Integrators, Clippers, Clampers & Active Limiters, Log and Antilog Amplifiers, Precision Rectifiers

UNIT III WAVEFORM GENERATORS

Comparator, Regenerative comparator, sine wave generators, Astable multivibrator and Monostable multivibrator, triangle wave generators, saw tooth wave function generator – 555 Timer: Functional Diagram, Monostable and Astable operation,

UNIT IV D/A & A/D CONVERTERS AND ACTIVE FILTERS

D/A conversion: D/A conversion techniques, weighted resistor DAC and R-2R Ladder DAC – A/D conversion: A/D conversion techniques, Flash type ADC, Monolithic ADC and Ramp type ADC, Active Filters Design First order: LPF -Butterworth Filter, HPF and BPF

UNIT V PLL AND SPECIAL FUNCTION ICs

PLL: Phase detector/comparator, VCO, Applications: Frequency Multiplication / Division, Frequency Synthesizer – XR-2206 Function Generators, IC 723 general purpose regulator, Audio Power amplifier

Course Code	Course Title	L	Т	Р	С
10211EC105	CONTROL SYSTEMS	2	1	0	3

Program Core

b) Preamble

This course aims to provide a basic knowledge about control system, its significance, transfer function, open and closed loop systems, mathematical model of electrical and mechanical systems, time domain and frequency domain analysis of I order and II order systems and their specifications, stability analysis in time and frequency domain, design of compensators viz., lag and lead compensators, characteristics and significance of P, PI and PID controllers and State Space analysis.

c) Prerequisite

Signals and Systems

d) Related Courses

Linear Integrated Circuits, Analog Communication Systems

e) Course Outcomes

On successful completion of this course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Choose the concepts of control system components and derive the mathematical model of electrical and mechanical systems.	К3
CO2	Determine the Time response of I order and IIorder systems for various test signals and examine the system stability using time domain approach.	К3
CO3	Sketch the Frequency response of I order andII order systems and examine the system stability using frequency response plots.	К3
CO4	Develop controllers and compensators forControl System analysis using Frequencydomain approach.	К3
CO5	Apply the concept of State-Space for ControlSystem Analysis.	K3

CO5	М	М	L	L	М	-	-	-	М	L	-	М	М	-

g) Course Content

UNIT I CONTROL SYSTEM COMPONENTS AND REPRESENTATIONS

Basic components of control system – open loop and closed loop systems: differential equation - transfer function, modeling of electric systems, translational and rotational mechanical systems - block diagram reduction techniques - signal flow graph

UNIT II TIME DOMAIN AND STABILITY ANALYSIS

Standard test signals – Transient and Steady state response of first order systems and second order systems –Stability; Concept and definition, characteristic equation, location of poles – Routh Hurwitz criterion: relative stability - Root locus Technique: construction and properties

UNIT III FREQUENCY DOMAIN AND STABILITY ANALYSIS

Frequency domain Specification - Gain Margin, Phase Margin; Bode plot, Polar plot – Stability analysis using frequency response methods; Correlation between time domain and frequency domain specification

UNIT IV COMPENSATORS AND CONTROLLERS

Realization of basic compensators- series, parallel and series - parallel compensation - Lead and Lag networks – Design of Lead and Lag compensator using Bode plot – Introduction to P, PI, PD and PID Controllers

UNIT V CONTROL SYSTEM ANALYSIS USING STATE SPACE

State variable representation – Canonical Realization - Conversion of state variable models to transfer functions - Conversion of transfer functions to state variable models - state transition Matrix - Concepts of Controllability and Observability.

b) Preamble

The signals existing in the real world are analog in nature and hence processing of this signal in continuous mode or discrete mode becomes essential in engineering applications. This course provides the knowledge on continuous and discrete time signals and systems and its analysis.

c) Prerequisite

Fourier series and Transform Techniques

d) Related Courses

Discrete Time Signal Processing

e) Course Outcomes

On successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Identify the types of continuous time and discrete time signals, systems and their properties	K2
CO2	Apply Fourier Transform, Laplace transform and its properties for the analysis of continuous time signals.	K3
CO3	Use Fourier and Laplace transforms to examine the continuous timesystems and realize it.	К3
CO4	Construct the discrete time signals using DTFT, Z transform and their properties.	К3
CO5	Make use of DTFT and Z transform to examine the discrete timesystems with realization.	К3

g) Course Content UNIT I CLASSIFICATION OF SIGNALS AND SYSTEMS

Introduction to signals - Classification of signals – Continuous time, Discrete Time, Elementary signals - Basic operations on signals - Analysis and synthesis of signals using Singularity function - Continuous and Discrete Time Systems – Classification, LTI system – Properties.

UNIT II CONTINUOUS TIME SIGNALS

Fourier analysis of continuous time signals: Review of Fourier series- Continuous Time Fourier transform - Properties of continuous time FT - Laplace Transform - Properties of Laplace Transform.

UNIT III CONTINUOUS TIME SYSTEMS

Convolution Integral - Frequency response of continuous time LTI systems using Fourier Transform and Laplace Transform - Realization of CT systems: direct forms, cascade and parallel, Application of CT Systems.

UNIT IV DISCRETE TIME SIGNALS

Sampling of Continuous Time signals and aliasing, Fourier analysis of discrete time signals: Discrete time Fourier series, Discrete Time Fourier transform - Properties of DTFT, Z Transform, Properties of Z Transform

UNIT V DISCRETE TIME SYSTEMS

Convolution sum, Frequency response of discrete time LTI systems using Discrete Time Fourier Transform and Z Transform, Realization of DT systems: direct forms, cascade, parallel - Applications of DT systems

f. Correlation of COs with POs and PSOs

g) Course Content

UNIT I ELECTROSTATIC FIELDS

Review of scalar and vector field: Dot and Cross products, Cartesian, Cylindrical, Spherical coordinates systems, physical interpretation of gradient, divergence and curl - Gauss's law - Stoke's Theorem - Electric field due to point-charges - Electrostatic potential - Laplace and Poisson's equation in one-dimension - Electric flux density - Boundary conditions

UNIT II STEADY MAGNETIC FIELDS

Lorentz Law of force, magnetic field intensity (H) - Biot-Savart's Law - Ampere's Law - Magnetic field intensity due to straight conductors, infinite sheet of current, at the centre of the toroid, along the axis of the circular loop and solenoid -Magnetic flux density (B) – Magnetic moment- Boundary conditions – Magnetic Scalar and vector potential - Magnetic force - Inductance

UNIT III MAXWELLS EQUATIONS AND PLANE WAVE

Continuity equation - Displacement current - Maxwell's equation - Boundary conditions – Plane wave equation in conducting and non-conducting media, Phase velocity, Group velocity, Depth of penetration, Conductors and dielectrics, Impedance of conducting medium, Brewster Angle, Poynting vectors and Poynting theorem.

UNIT IV TRANSMISSION LINE

Cascaded T sections: Line parameters - Transmission Line Equation – infinite line- Waveform distortion – distortionless line- Reflection Line – Input and Transfer Impedance - Open and Short Circuited Lines - Reflection Factor and Reflection Loss

UNIT V LINE AT HIGH FREQUENCIES

Dissipation less line: Voltage and Current - Input impedance - Open and short-circuited lines -Power and impedance measurements- Standing Waves- Impedance Matching in High Frequency Lines using Smith Chart.

Course Code	Course Title	L	Т	Р	С
10211EC108	COMMUNICATION SYSTEMS	2	1	0	3

Program Core

b) Preamble

This course provides an introduction about all types of analog, digital modulation and demodulation techniques with its applications. This course also provides the information about the baseband and passband transmission schemes, enabling the student to determine errors.

c) Prerequisite

Analog Electronics

d) Related Courses

Cellular Mobile Communication, Satellite Communication

e) Course Outcomes

On successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)	
CO1	Interpret the behavior of amplitude modulation and detection schemes and explain transmitter and receiver characteristics.	K2	
CO2	Explain the various features of angle modulation and demodulation techniques and compare their performances	K2	
CO3	Illustrate the influence of noise over communication systems through random process and noise theory	K2	
CO4	Apply the concept of sampling and various wave form coding schemes.	К3	
CO5	Identify the baseband transmission techniques and modulation schemes in pass band transmission.	К3	
f) Correlation of COs, POs and PSOs

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
C01	М	Н	L	Н	L	-	-	L	L	-	-	-	-	-
CO2	М	Н	L	Н	L	-	-	L	L	-	-	-	-	-
CO3	М	L	L	L	-	М	-	L	L	-	L	М	М	-
CO4	Н	Н	Н	Н	Н	-	-	L	L	L	L	Н	Н	-
C05	Н	L	L	L	М	-	-	L	L	L	L	-	L	-

g) Course Content

AMPLITUDE MODULATION UNIT I

Modulation - Need for Modulation - Frequency Spectrum and Bandwidth, Principles of Amplitude Modulation: AM Envelope - Modulation Index, AM Modulator and Demodulator: DSBSC- SSBSC- VSB, AM Transmitter, AM Receiver: Superheterodyne Receiver.

UNIT II **ANGLE MODULATION**

Angle Modulation - Phase and Frequency Modulation, Narrow Band FM and Wideband FM, FM Modulator: Generation of FM by Parameter Variation Method - Armstrong's Indirect Method, FM Demodulator: Frequency Discriminator - Foster Seeley Discriminator - Balanced Slope Detector- PLL Detector.

UNIT III RANDOM PROCESS AND NOISE THEORY

Random Variables, Random Process: Stationary Process-Ergodic Process-Gaussion Process, Transmission of Random Process Through Linear Systems, Noise: Shot Noise - Thermal and White Noise - Narrow Band Noise - Noise Equivalent Bandwidth - - Noise Figure, Capture and Threshold Effect, Noise in AM.

UNIT IV SAMPLING PROCESS AND WAVE FORM CODING

Basic elements of a digital communication system, Sampling Theorem - Sampling and signal recovery, PAM-PWM-PPM, Quantization Process: Quantization Noise and Error, Modulation: PCM-DM-ADM-DPCM

BASE BAND AND PASS BAND TRANSMISSION UNIT V

Matched filter -- Intersymbol Interference- Correlative coding -- Adaptive Equalization-Eye patterns, Digital modulation schemes: Generation-Detection-BW of ASK, FSK, PSK, QPSK, OAM.

Nil

e) Course Outcomes

On successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the functionalities of 8085 microprocessor architectures and assembly language programming.	K2
CO2	Summarize the functionalities of 8086 microprocessor architectures and assembly language programming.	K2
CO3	Illustrate the functionalities of 8051 microcontroller architectures and assembly language and C programming.	K2
CO4	Relate the functionalities of different peripheral devices, and port RTC.	K2
CO5	Outline the architectures and features of PIC and ARM microcontrollers and their applications.	K2

g) Course Content

UNIT I 8085 MICROPROCESSOR

Introduction to 8085 architecture, addressing modes, instruction formats, instruction set, timing diagram, memory mapping and assembly language programming.

UNIT II 8086 MICROPROCESSOR

Introduction to 8086 architecture, features, signals, addressing modes, instruction formats, instruction set, I/O and memory interfacing, interrupts, minimum mode and maximum mode operation, assembly language programming.

UNIT III 8051 ARCHITECTURE

Hardware features, architecture, internal RAM structure, special function registers, addressing modes, instruction set, memory organization, I/O ports and circuits, timers, interrupts, interfacing of external memory, assembly language programming and C programming.

UNIT IV PERIPHERAL DEVICES

Parallel Peripheral Interface (8255), Timer/Counter (8253), Serial Communication/UART (8251), A/D and D/A Interface, Keyboard and Display Controller (8279), Interrupt Controller (8259), DMA Controller (8237), Real Time Clock.

UNIT V EMBEDDED SYSTEMS APPLICATIONS USING PIC AND ARM MICROCONTROLLERS

PIC: Introduction, features, architecture-ARM: Features and Classifications-Case Studies PIC /ARM: Temperature Control System, Motor Speed Control System, Traffic light System, Elevator System, Data Acquisitions System.

Course Content g)

UNIT I INTRODUCTION TO DATA COMMUNICATION AND NETWORKING DEVICE 9 Evolution of data Networks-Network fundamentals: Data rate, Channel capacity, modes of communication-Network Topologies- Categories of Networks- ISO/OSI Reference Model -TCP/IP Model-Networking and Inter Networking Devices: Repeaters, Hubs, Bridges, Switches, Routers, Gateways.

UNIT II DATA LINK LAYER & LOCAL AREA NETWORK

Logical Link Control – Types of error: single bit error- Burst error-Error Detection Techniques: CRC checksum-Error Correction Technique: Hamming code -Flow control protocol: ARQ protocols-Medium Access Control: Random Access Protocols.

UNIT III SWITCHING & ROUTING TECHNOLOGIES

Circuit switching-packet switching-message switching-Internetworking- IP Addressing: IPv4 -Subnetting: classful-CIDR-IPv6-Routing: Distance Vector - Link State Routing Protocols.

UNIT IV END-END PROTOCOLS

Process-process delivery: Basics of Port addressing and Sockets- TCP, UDP and SCTP-TCP congestion control- Application protocols: WWW, HTTP, SMTP, FTP.

UNIT V QUEUING MODELS & ADVANCED SWITCHING

Markov chain theory - Queuing model basics and L - M/M/1 and its variants - M/G/1, G/M/1applications of queuing model, -Introduction to Software Defined Networking.

Course Code	Course Title	L	Т	Р	С
10211EC111	DISCRETE TIME SIGNAL PROCESSING	2	1	0	3

Program Core

b) Preamble

Discrete Time Signal Processing provides an introduction to the basic concepts of signal processing to acquire knowledge on systems using various transformation techniques. It also invokes students to realize the different filter structures and to develop algorithms for signal processing.

c) Prerequisite

Signals and Systems

d) Related Courses

Advanced Digital Signal Processing, Digital Image and Video Processing

e) Course Outcomes

On successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Demonstrate the use of DFT and its properties for linear filtering applications.	K3
CO2	Use suitable transformation technique to design Digital IIR filters.	K3
CO3	Apply windowing and sampling techniques to design FIR filter.	K3
CO4	Illustrate the finite word length effects in filters.	К3
CO5	Explain Multirate Signal Processing and the architecture, addressing modes of TMS320C67XX processor	K2

g) Course Content

UNIT I DISCRETE FOURIER TRANSFORMS

DFT and its properties - Circular Convolution Methods – Linear filtering: Overlap add and overlap save methods - FFT algorithms: Radix-2 FFT algorithms, Decimation in Time, Decimation in Frequency algorithms.

UNIT II IIR FILTER DESIGN

Analog filter design: Butterworth and Chebyshev filter – Discrete time IIR filter from analog filter: IIR filter design by using Approximation of derivatives, Impulse Invariance, Bilinear transformation – Filter design (LPF, HPF) using frequency translation.

UNIT III FIR FILTER DESIGN

Linear phase FIR filter - Filter design using windowing techniques (Rectangular Window, Hamming Window and Hanning Window) – Frequency sampling techniques – Structures of FIR: Direct form, Cascade, Linear Phase structures.

UNIT IV FINITE WORDLENGTH EFFECTS

Fixed point and Floating point arithmetic - Quantization- Truncation and Rounding errors - Quantization noise- Coefficient quantization error – Product quantization error – Overflow error – Limit cycle oscillations– Scaling.

UNIT VMULTIRATE SIGNALPROCESSING,DSPPROCESSORSANDAPPLICATIONS9

Decimation–Interpolation–Sampling rate conversion by a rational factor - DSP processor: Harvard architecture, Pipelining, MAC unit, TMS320C67XX processor Architecture, Addressing modes - Application – Sub band coding – Musical Sound processing.

f) Correlation of COs, POs and PSOs

g) Course Content

UNIT I CELLULAR CONCEPTS AND MOBILE RADIO PROPAGATION

Overview of wireless communication– Cellular concept: Frequency reuse, Hand off, System capacity – Radio Propagation: Large scale path loss, Reflection, Diffraction, Scattering-Small scale fading – Multipath channel parameters : Doppler shift, Doppler spread – Types of fading: Flat fading, Frequency selective fading, Fast fading and Slow fading.

UNIT II MODULATION TECHNIQUES

Overview of digital modulation – Linear modulation: Principles of Offset QPSK– Constant envelope modulation: Minimum Shift Keying, Gaussian Minimum Shift Keying, – Spread spectrum modulation techniques: DS-SS, FH-SS

UNIT III MULTIPATH MITIGATION TECHNIQUES

Equalization : Adaptive equalization , Linear and Non-Linear equalization – Zero Forcing, and Minimum Mean Square Error Algorithms – Micro and Macro diversity – Diversity combining techniques – Transmit diversity – Rake receiver.

UNIT IV MULTI USER SYSTEMS

Multiuser channels : Uplink and downlink – Multiple Access : FDMA, TDMA, CDMA, SDMA, Hybrid techniques – Power control – Uplink/downlink channel capacity – MIMO multiuser systems.

UNIT V WIRELESS COMMUNICATION STANDARDS

Evolution – 3G Overview: WCDMA/UMTS, 3GPP Network structure – 4G features and challenges – IMS, LTE system over view and physical channels, WiMax/IEEE802.16– Advanced broad band wireless access : UWB, AWS – 5G wireless system : Architecture and 5G deployment.

g) Course Content

UNIT I WAVE GUIDES

General Wave behaviours along uniform Guiding structures - Transverse Electromagnetic waves - Transverse Magnetic waves - Transverse Electric waves - TM and TE waves between parallel planes - TM and TE waves in rectangular wave guides - TM and TE waves in Circular wave guides

UNIT II ANTENNA FUNDAMENTALS

Basic antenna parameters: gain, directivity, beam solid angle, beam width and effective aperture calculations - Effective height - wave polarization - antenna temperature - radiation resistance - radiation efficiency - antenna field zones - principles of reciprocity - Duality of antennas - Concept of retarded potential - Field, directivity and radiation resistance of an infinitesimal dipole - half wave dipole - Measurement of radiation pattern - gain

UNIT III ANTENNA ARRAYS

Two element Array - N-Element Linear Array: Uniform Amplitude and Spacing, Non-Uniform Amplitude and Spacing, Directivity- Principle of pattern multiplication - Grating lobes - Planar Array: Broadside, End fire & Binomial arrays, Dolph Chebyshev arrays

UNIT IV SPECIAL ANTENNAS

Principles of Horn - Parabolic dish antenna - Casse grain antenna - Travelling wave antenna - Principle and applications of V and rhombic antenna - Principle of Log periodic antenna array and Helical antenna - Rectangular Patch antenna - Antennas for mobile base station and handset - Phased Array antenna

UNIT V RADIO WAVE PROPAGATION

Radio wave propagation – Modes- structure of atmosphere- sky wave propagation- effect of earth's magnetic field- Ionospheric abnormalities and absorption- space wave propagation-LOS Distance - Field strength of space wave - duct propagation - VHF and UHF Mobile radio propagation - tropospheric scatter propagation

UNIT I **CMOS LOGIC AND VLSI DESIGN FLOW**

Review of MOS Transistors: nMOS, pMOS – Logic gates: CMOS Inverter – CMOS NAND Gate - CMOS NOR Gate - Compound Gates - Pass Transistor and Transmission Gates - Tristate - Multiplexers - VLSI Design Flow: Y-Chart.

UNIT II CMOS FABRICATION AND PROCESSING TECHNOLOGY 9

CMOS Fabrication and Layout: Inverter Cross Section – Layout Design Rules – Gate Layout – Stick Diagrams - CMOS Processing Technology: Background, Wafer Formation, Photolithography, Well and Channel Formation - SiO2: Isolation, Gate Oxide, Gate and Source/Drain Formation – Contacts and Metallization – Passivation – Metrology.

UNIT III **CMOS THEORY**

MOS Transistor Theory – Ideal I-V Characteristics – C-V Characteristics – Non ideal I-V Effects - DC Transfer Characteristics: Static CMOS inverter DC characteristics, Beta ratio effect, Noise margin – Pass transistor DC characteristics.

UNIT IV SEQUENTIAL CIRCUITS

Sequencing Static Circuits – Circuit Design for Latches and Flip – Flops – Static Sequencing Element Methodology – Sequencing Dynamic Circuits – Synchronizer.

ARITHMETIC BUILDING BLOCKS AND MEMORY ARCHITECTURE 9 UNIT V

Adders: Single bit Addition, Carry-Ripple Adder, Carry Skip Adder, Carry-Look ahead Adder -Multipliers: Binary Multiplication, Array Multiplier - Shifters: Funnel Shifter source Generator, Funnel Shifter, Barrel Shifter - Comparator - Counters - Memories: one bit SRAM, one bit DRAM,

Course Code	Course Title	L	Т	Р	С
10211EC115	OPTICAL AND MICROWAVE COMMUNICATION SYSTEMS	2	1	0	3

Program Core

b) Preamble

This course deals with the fundamentals of optical fibers, sources, and detectors. Students will get familiarize with Microwave components and its Scattering parameters, Solid state devices, tubes and measurements.

c) Prerequisite

Antenna Theory

d) Related Courses

RF & Microwave Integrated circuits, Satellite Communication, Radar and Electronic Navigational system.

e) Course Outcomes

On successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Discuss the fundamentals of optical fibers and its different types of losses, dispersion	K2
CO2	Explain the concepts of optical light sources and detectors for optical fiber communication	K2
CO3	Apply the properties of S parameters to study the characteristics of microwave components.	К3
CO4	Compare the working principle of different solid state- based devices.	K2
CO5	Demonstrate the working principle of Microwave tubes and Measurement techniques.	K2

f) Correlation of COs, POs and PSOs

	РО 1	PO 2	PO 3	РО 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

C05	Н	М	М	L	М	L	-	-	L	L	М	L	L	-

g) Course Content

UNIT I OPTICAL FIBER FUNDAMENTALS

Evolution of Optic Communications - Basic Optical Laws – Light Propagation in fiber - Fiber Types - Splicing Techniques and Connectors – Attenuation, Absorption, Scattering Losses, Bending Losses, Core and Cladding Losses – Dispersion: Group Delay, Material Dispersion, Waveguide Dispersion, Intermodal Dispersion.

UNIT II OPTICAL SOURCES, DETECTORS AND SYSTEMS

Intrinsic and extrinsic material-direct and indirect band gaps-LED structures-Surface emitting LED-Edge emitting LED-quantum efficiency and LED power - light source materialsmodulation of LED- LASER diodes. Detectors: PIN photo detector, Avalanche photo diodes, Photo detector noise-noise sources.

UNIT III MICROWAVE COMPONENTS AND TWO PORT NETWORKS

Microwave frequencies - advantages and applications, scattering matrix formulation: Concept of N port scattering matrix representation - S parameters properties, Passive microwave devices: bends – corners – attenuators, S Matrix Calculations for 2 port Junction: E plane and H plane Tees - Magic Tee, Directional Coupler - Circulator and Isolator.

UNIT IV MICROWAVE SOLID STATE DEVICES

Transit time limitations in Microwave Bipolar Transistors, Power frequency limitations, Gunn effect: RWH theory - High-field domain and modes of operation -Avalanche transit time devices: IMPATT and TRAPATT diodes, parametric amplifiers

UNIT V MICROWAVE TUBES AND MEASUREMENTS

Microwave vacuum tube-based devices, Limitations of conventional tubes at microwave frequencies, Two cavity Klystron - velocity modulation – Reflex klystron - Traveling wave tube, Magnetron. Measurement of Power, Wavelength, Impedance, Attenuation, SWR.

Program Core

b) Preamble

This course provides the fundamental concept of how operating system schedules the various embedded computational process in real time applications.

c) Prerequisite

Microprocessor and Microcontroller

d) Related Courses

Embedded Linux and Device Drivers

e) Course Outcomes

On successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the basic concepts of operating system and RTOS objects and simulate RTX51 based embedded OS code for 8051 microcontroller using Keil IDE.	K2, S3
CO2	Summarize the concept of board support package and simulate boot loader interface.	K2, S3
CO3	Illustrate the concept of embedded storage architecture.	K2
CO4	Compare the various embedded file systems, storage space optimization techniques and develop Linux C programs to implement Linux file system.	K2, S3
CO5	Infer the Linux device driver development process for communication interfaces and to develop Linux drivers for basic devices.	K2, S3

g) Course Content

UNIT I **OVERVIEW OF RTOS**

Introduction to OS, OS structure, system calls, RTOS task and task state, scheduling - preemptive and non-preemptive, process synchronization, inter process communication: message queues, mailboxes, pipes, critical section, semaphores, classical synchronization problem –deadlocks.

UNIT II BOARD SUPPORT PACKAGES

Kernel build procedure, inserting Board Support Packages (BSP) in kernel build procedure, boot loader interface, memory map, interrupt management, PCI subsystem: timers - UARTpower management.

UNIT III **EMBEDDED STORAGE ARCHITECTURE**

Embedded storage: MTD – MTD architecture - MTD driver for NOR flash - flash mapping driver.

UNIT IV EMBEDDED FILE SYSTEM AND OPTIMIZATION

Embedded file system: RAM disk - RAMFS - CRAMFS, journaling flash file systems: JFFS and JFSS2, NFS: PROC file system, optimizing storage space: kernel space optimization - application space optimization, applications for embedded Linux - tuning kernel memory.

UNIT V LINUX DEVICE DRIVERS

Embedded drivers: Linux device model, loadable kernel modules, Linux serial driver - function pointers, data flow, ethernet driver - I²C subsystem on Linux - USB gadgets.

Program core

b) Preamble

This introductory course is designed to provide information about the technologies that make up the Internet of Things (IoT) and intents to produce skilled graduates with basic understanding of IoT and how they are applied in different application domains. It will help to know the components of IoT products and services including devices for sensing, actuation, processing, and protocols for data communication and networking.

c) Prerequisite

Data Communication Networks

d) Related Courses

Software Defined Networking

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Interpret the fundamental of IoT including architecture, functional blocks and connecting devices.	K2
CO2	Explain the concepts of IoT by interfacing devices using Raspberry Pi/Arduino IDE.	K2
CO3	Extend the various IoT protocols for routing and data acquisition.	K2
CO4	Outline the IoT perceptions for cloud and fog services.	K2
CO5	Summarize the concepts of IoT to solve real time scenario for various smart applications.	K2

g) Course Content

UNIT I FUNDAMENTALS OF IoT

Evolution of Internet of Things – Enabling Technologies – IoT Architectures: oneM2M, IoT World Forum (IoTWF) – Simplified IoT Architecture and Core IoT Functional Stack–Functional blocks of an IoT ecosystem – Sensors, Actuators, Smart Objects and Connecting Smart Objects.

UNIT II IOT INTERFACING

Introduction to Arduino – Arduino IDE –Basic Commands –Interfacing with Arduino, Introduction to Raspberry Pi – Terminal Commands- Interfacing with Raspberry Pi.

UNIT III IOT COMMUNICATION PROTOCOLS 6

Infrastructure Protocols, Discovery Protocols, Data Protocols- MQTT, CoAP, Web Socket. Identification Protocols, Device Management, Semantic Protocols.

UNIT IV IoT SUPPORTING SERVICES

Cloud Computing-Virtualization and its types-Cloud Models-Implementation- Open Stack-AWS, Fog Computing in IoT-Fog Nodes-Deployment Model-Applications.

UNIT V SMART APPLICATIONS

Smart and Connected Cities: Smart Grids, Smart Lighting, Smart Parking Architecture and Smart Traffic Control.

g) Course Content

List of Experiments

Module 1 – Software (CO1)

- 1. Write a Verilog program for the following combinational designs (a) Decoder (b) Encoder.
- 2. Write a Verilog program for the following combinational designs (a) Multiplexer (b) De-multiplexer.
- 3. Write a HDL code to describe the functions of a full adder using three modeling styles.
- 4. Write a model for 32 bit ALU using the schematic diagram shown below

- a. ALU should use the combinational logic to calculate an output based on the four bit op-code input.
- b. ALU should pass the result to the out bus when enable line in high, and tri-state the out bus when the enable line is low.
- c. ALU should decode the 4 bit op-code according to the given in example below.

OPCODE	ALU OPERATION
1.	A + B
2.	A - B
3.	A Complement
4.	A * B
5.	A AND B
6.	A OR B
7.	A NAND B
8.	A XOR B

- 5. Develop the Verilog code for the following flip-flops: SR, D, JK &T.
- 6. Write a Verilog code for 4 bit binary counter (Synchronous and Asynchronous).
Module 2 – Hardware (CO2)

- 7. Realization of logic functions with the help of Universal Gates (NAND, NOR)
- 8. Implementation of comparator using digital logic ICs
- 9. Implementation of Synchronous Counter using digital logic ICs
- 10. Implementation of Asynchronous Counter using digital logic ICs

Module 3 – Interfacing (CO3)

- 11. Write a Verilog code and realize all the logic gates using FPGA
- 12. Write HDL code to interface hex key pad and display the key code on seven segment display using FPGA.

10211EC305	COMMUNICATION LABORATORY	0	0	2	1

Program Core

b. Preamble:

This course provides to demonstrate all types of modulation techniques for both analog and digital communication systems.

c. Pre-requisites:

Analog Electronics

d. Related Courses:

Nil

e. Course Outcomes:

CO Nos.	Course Outcomes	Skill Level (Based on Dave's Taxonomy)
CO1	Perform the analysis of amplitude modulation and frequency modulation along with its demodulation circuits.	S2
CO2	Demonstrate the effects of sampling, error control codes and multiplexing.	S2
CO3	Execute the analysis of various digital modulation techniques, fading channel, and channel coding techniques.	S2
CO4	Design the antenna and test the digital modulation scheme using network and spectrum analyzers.	S2

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

g. Course Content:

List of Experiments

S No	Nome of the Experiment	Course
5. 110	Name of the Experiment	Outcomes
1	Design and testing of Amplitude Modulation and Demodulation. (Hardware)	CO1
2	Design and testing of Frequency Modulation and Demodulation. (Hardware)	CO1
3	Simulation of Sampling, Quantization, and Reconstruction of the signals.	CO2
4	Analysis of Time Division Multiplexing and De-multiplexing Techniques.	CO2
5	Simulation and Performance analysis of Cyclic Coding	CO2
6	Pulse Code Modulation and Demodulation of a signal.	CO3
7	Simulation and Performance Analysis of Binary Amplitude Shift Key in an AWGN environment.	CO3
8	Design and testing of ASK Modulation and Demodulation. (Hardware)	CO3
9	Simulation and Performance Analysis of Frequency Shift Key in an AWGN environment.	CO3
10	Design and testing of FSK Modulation and Demodulation. (Hardware)	CO3
11	Simulation and Performance Analysis of Binary Phase Shift Key in an AWGN environment.	CO3

12	Simulation and Performance Analysis of Quadrature Amplitude Modulation in an AWGN environment.	CO3
13	Simulation and Performance Analysis of digital modulation technique in fading channel with channel coding.	CO3
14	Performance analysis of monopole antenna using a Network Analyzer. (Hardware)	CO4
15	Design and testing the performance of Binary PSK modulation using Spectrum Analyzer. (Hardware)	CO4

b) Preamble

Optical and Microwave laboratory provides an opportunity to explore the concepts inoptical devices and microwave systems in a laboratory setting with an emphasison measurement techniques. The listed experiment provides the practical analysis of scattering matrix for various microwave components and its properties, operation of solid state based devices.

c) Prerequisite

Nil

d) Related Courses

Optical & Microwave Engineering.

e) Course Outcomes

CO Nos.	Course Outcomes	Skill Level (Based on Dave's Taxonomy)
CO1	Demonstrate the characteristics of microstrip transmission line, distributed elements and Tee junctions using ANSYS HFSS software.	S2
CO2	Perform characteristics analysis of microwave test benches using reflex klystron and gunn source.	S2
CO3	Execute the characteristics of LED/photodiodes and performance analysis of fibre optic cable with less attenuation and dispersion.	S2
CO4	Test the characteristics of microwave integrated circuits and devices.	S2

CO5	L	М	-	М	L	-	-	-	L	М	-	М	Н	-

g) Course Content

UNIT I RF CIRCUIT DESIGN

Importance of Radio Frequency design – Dimensions and units, Frequency spectrum – RF Behavior of passive components: High frequency resistors, capacitors and inductors - Chip components and circuit board considerations. Review of transmission lines: parameters, Characteristic impedance, Reflection coefficient, Standing waves

PLANAR TRANSMISSION LINES UNIT II

Characteristics and design parameters of planar transmission lines – strip line – microstrip Line – coplanar waveguide – coplanar strips slot line – fin line

MICROWAVE INTEGRATED CIRCUITS UNIT III

Introduction to MIC – advantages and applications – MMIC technology: Active device Technologies, design approaches- multichip module technology – Hybris MIC-Monolithic MIC

UNIT IV 9 **MIC FABRICATION AND MEASUREMENT TECHNIQUES**

Fabrication technology and Measurement Techniques – test fixture measurements - probe station measurements -thermal and cryogenic measurements- experimental field probing Techniques.

UNIT V SYSTEM DESIGN USING MMIC TECHNOLOGY

Analysis of MMIC Technology – micro machined antenna – micro electro-mechanical system antennas - design issues in Phased array radar- Satellite Transponder - Integrated Electronic warfare T/R modules - Avionic systems integration

Course Code	Course Title	L	Т	Р	С
10212EC102	CELLULAR MOBILE COMMUNICATION	3	0	0	3

Program Elective

b) Preamble

This course addresses about the fundamentals of cellular mobile communication and provides overview of existing and emerging cellular communication networks. It covers radio frequency propagation and mobile antennas, use of IP and associated technologies for a cellular system, wireless generation technologies-1G, 2G, 2.5G, and 3G. For enhanced performance in system, the knowledge about the next generation cellular technologies like 4G and 5G are essential.

c) Prerequisite

Nil

d) Related Courses

Wireless Communication, Communication Systems

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the basic concepts of a cellular communication system and standards	K2
CO2	Illustrate radio frequency propagation phenomenon and mobile antenna types	K2
CO3	Demonstrate the significance of internet protocol and associated technologies in a cellular system	K2
CO4	Interpret various wireless communication technologies, including third generation	K2
CO5	Discuss the features of fourth-generation and emerging technologies, including fifth generation technology	K2

g) Course Content

UNITI INTRODUCTION TO CELLULAR COMMUNICATION

Motivation for cellular communication, History of wireless communications and Birth of cellular system, Overview of cellular system and Duplexing, Types of interference, Evolution of cellular standards, Ecosystem of cellular system, Phases and Performance of a cellular system.

UNITII RADIO FREQUENCY PROPAGATION AND MOBILE ANTENNAS 9

Radio frequency waves and propagation modes, Free-space propagation, Cellular propagation mechanism and Prediction of received signal strength, Antenna for mobile communication and its effects, human body interactions, and specific absorption rate, Cell-site antennas and its effects, Space diversity antennas and base station systems.

UNITIII IP AND ASSOCIATED TECHNOLOGIES FOR A CELLULAR SYSTEM 9

Internet protocol, Protocol stack for the internet, Routing and forwarding of IP packets, Transport of information within the network infrastructure, Voice over the IP related protocols, IP-centric protocols, and Essence of IPv6.

UNITIV CELLULAR TECHNOLOGIES

First generation (1G), Second generation (2G), TDMA-based 2G standard, IS-95, Two point five generation (2.5G), Third generation (3G), 3G air interface technology, 3G spectrum, subscriber forecast for 3G in India with Quality of services (QoS) in 3G, Limitations of 3G and rise of the Fourth generation (4G) cellular communication.

UNITV 4G TECHNOLOGY AND BEYOND

4G evolution, Objectives of the projected 4G, Advantage of 4G network technology over the 3G, Applications of 4G, 4G Technologies, 4G software, Limitations of 4G, New technologies in the cellular data networks and emergence of new technologies Fifth-generation (5G) communication.

Course Code	Course Title	L	Т	Р	С
10212EC103	INFORMATION THEORY AND CODING	3	0	0	3

Program Elective

b) Preamble

The aim of this course will study how information is measured in terms of probability and entropy to get exposed in compression technique, audio & video. This course discusses about the various methods of coding techniques to correct and detect errors and add security solutions. The course will also introduce the principles and applications of information theory.

c) Prerequisite

Digital Electronics

d) Related Courses

Wireless Communication

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the basics of information and coding theory	K2
CO2	Illustrate the capacity reduction-based coding techniques for text, audio, and speech data types.	K2
CO3	Compare the capacity reduction-based coding techniques for image and video types of data.	K2
CO4	Discuss the various security-oriented coding techniques for Block codes	K2
CO5	Interpret the different error control techniques for convolutional codes	K2

CO5	Н	L	М	L	L	L	L	L	L	L	L	L	М	-

g) Course Content

UNIT I INFORMATION THEORY

Entropy - Information rate - classification of codes - Kraft McMillan inequality- Source coding theorem: Shannon-Fano coding, Huffman coding, Extended Huffman coding- Joint and conditional entropies- Mutual information – Discrete memoryless channels: BSC, BEC, Channel capacity, Shannon limit.

UNIT II SOURCE CODING: TEXT, AUDIO AND SPEECH

Text: Adaptive Huffman Coding, Arithmetic Coding, LZW algorithm- Audio: Perceptual coding, Masking techniques: Spectral, Temporal, Psychoacoustic model, MPEG Audio layers I, II, III, Dolby AC3- Speech: Channel Vocoder, Linear Predictive Coding.

UNIT III SOURCE CODING: IMAGE AND VIDEO

Image and Video Formats: GIF, TIFF, SIF, CIF, QCIF- Image compression: READ, JPEG Video-Compression: Principles-I, B, P frames, Motion estimation, Motion compensation, H.261, MPEG standard.

UNIT IV ERROR CONTROL CODING: BLOCK CODES

Principles of Hamming weight, hamming distance, Minimum distance decoding - Single parity codes-Hamming codes- Repetition codes- Linear block codes- Cyclic codes – Syndrome calculation: Encoder and decoder – CRC.

UNIT V ERROR CONTROL CODING: CONVOLUTION CODES

Convolution codes: code tree, trellis diagram, state diagram, Encoding, Decoding-Sequential search and Viterbi Algorithm - Principles of Turbo coding.

g) Course Content

UNIT I BASIC CONCEPTS AND RADAR EQUATIONS

Introduction to Radar – Radar equation – Radar Block diagram and Operation – Radar Frequencies – Millimeter and sub millimeter waves – Range performance of radars – System losses and propagation effects – Application of Radars.

UNIT II CW, FMCW AND MTI RADAR

Introduction to MTI and Doppler radar – Delay Line canceller – Moving Target Detector – Pulse Doppler Radar – CW Radar – FMCW – Radar Multiple or staggered Pulse Repetition frequencies – MTI radar Processor – Types of MTI – Airborne Radar.

UNIT III TRACKING RADAR

Tracking Radar and its types – Mono pulse Tracking – Conical scan and Sequential Lobbing - Low Angle Tracking – Synthetic Aperture Radar (SAR) – Tracking in range – Automatic tracking with surveillance Radar (ADT)

UNIT IV RADAR CLUTTER AND BASIC NAVIGATIONAL RADAR SYSTEM 9

Introduction to Radar Clutter – Surface clutter – Land Clutter – Sea Clutter and weather Clutter – Navigation: Introduction, Four Methods of navigation – Radio direction Finding – Types of Radar Antenna – Automatic directional finders – VHF Omni directional Range and VOR receiving equipment.

UNIT V ADVANCED NAVIGATIONAL SYSTEM

Hyperbolic system of Navigation – LORAN (Long Range Navigation) – Decca navigation system – DME (Distance Measurement Equipment) – TACAN (Tactical Air Navigation) – Navistar Global positioning system

g) Course Content

UNIT I INTRODUCTION TO SATELLITE COMMUNICATION

Orbital mechanisms: Origin and Brief History - Kepler's law & Newton's law, Orbital mechanics: Equation of Orbit- Geostationary Orbit- Location of Satellite in Orbit- Orbital Elements, Orbital perturbation, Look Angle determination, Satellite subsystems: Attitude and orbit control subsystem, power subsystem, telemetry tracking and command systems, communication subsystems

UNIT II SATELLITE LINK DESIGN

Basic transmission theory, Equivalent isotropic radiated power – Transmission losses – Free-space transmission – Feeder losses – Antenna misalignment losses – Fixed atmospheric and ionospheric losses – Link power budget equation, Downlink and uplink system design, Design of satellite links for specified C/N

UNIT III SATELLITE ACCESS

Analog – digital transmission system- Modulation and Multiplexing, Digital video Broadcast, Types of multiple access: FDMA concepts - Inter modulation and back off -SPADE system- TDMA concept- frame and burst structure - CDMA concept, Comparison of multiple access schemes, Satellite onboard processing

UNIT IV DIRECT BROADCAST SATELLITE TELEVISION AND RADIO 9

Introduction-C-Band and Ku-Band Home Satellite TV, Digital DBS TV, DBSTV System Design and Installation, Satellite Radio Broadcasting, Digital Video Broadcast (DVB) Standards, receive – Only home TV systems – Outdoor unit – Indoor unit for analog (FM) TV. MATV, CATV, Transmit and Receive earth stations

9

9

UNIT V SATELLITE APPLICATIONS

INTELSAT Series, INSAT, VSAT, Mobile satellite services: GSM, GPS, INMARSAT, LEO, MEO, Satellite Navigational System. Direct to home Broadcast (DTH), Digital audio broadcast (DAB)- World space services, Business TV(BTV), GRAMSAT, IRS satellites – PSLVs – GSLVs.

UNIT I OPTICAL TRANSMISSION SYSTEM DESIGN PRINCIPLES

Noise sources-channel impairments and optical transmission system-design principles Advanced modulation formats- polarization multiplexing-constrained coding-Multilevel modulation schemes - Orthogonal frequency-division multiplexing-Polarization multiplexing, Constrained coding and Coherent detection.

UNIT II COHERENT SYSTEMS

Basic principles of Coherent detections – Practical constraints – Injection laser line width state of polarization, local oscillator power, fiber limitations; Modulation formats – ASK-FSK-PSK-DPSK and polarization shift keying (POL SK); Demodulation schemes – Homodyne, Heterodyne – Synchronous and Non synchronous detection-Comparison-Carrier recovery in Coherent detection.

UNIT III OPTICAL NETWORK ARCHITECTURES

Introduction: First Generation optical networks–SONET / SDH Network. Second Generation (WDM) Optical Networks: Broad Cast and select - wavelength routing architectures – Media – Access Control protocols.

UNIT IV OPTICAL TDM AND SOLITON

Optical Time division Multiplexing – Int Interleaving – Packet Interleaving – Multiplexer and Demultiplexers – AND Gates – Non-linear optical loop Mirror – Soliton – trapping AND Gate – Synchronization.

9

9

9

UNIT V PHYSICAL LAYER

Physical layer: optical communication phenomena – system and network – fiber and optical transmission – advanced fiber design (Inc. holey fiber) – dispersion effects and compensation – polarization effects (PMD) and compensation – nonlinearities in system design – high-bit-rate transmission systems-light wave systems and network

g) Course Content

UNIT I DIGITAL TELEVISION

Analog to digital TV - Merits of Digital technology - Digital TV signals -Digitized video parameters - digital transmission and reception - codec Functions - codec MAA2100 -Video processor - MAA2300 - Audio processor - Performance Objectives for Digital Television: System noise - external noise sources - transmission errors - error vector magnitude - eye pattern - interference - co-channel interference - adjacent channel interference.

UNIT II TV CAMERA AND PICTURE TUBES

Principle of camera tubes – camcorder - image orthicon- vidicon – plumbicon – solid state image scanners - elements of a picture tube - focusing and deflection – EHT - picture tube controls - Delta gun – PIL – Trinitron - color camera - picture tubes purity – convergence - automatic degaussing. Display Technologies - basic working of Plasma - LCD and LED Displays.

UNIT III DIGITAL TRANSMISSION AND RECEPTION

Digital TV: Digitized Video, Source coding of Digitized Video - Compression of Frames - DCT based - (JPEG) - Compression of Moving Pictures (MPEG) - Basic blocks of MPEG2 and MPE4 - Digital Video Broadcasting (DVB). Modulation: QAM - (DVB-S, DVB-C), OFDM for Terrestrial Digital TV (DVB–T). Reception of Digital TV Signals (Cable, Satellite and terrestrial) - Digital TV over IP, Digital terrestrial TV for mobile.

9

9

UNIT IV ELEMENTS OF A DIGITAL TELEVISION SYSTEM

Television: Scanning - Blanking and synchronization - Picture signal - composite video signal-Vestigial sideband transmission - Principle of CCD Camera - Monochrome picture tube-Monochrome TV receivers - RF tuner, VHF tuner - Video amplifier - IF section - Vestigial sideband correction - Video detectors - Sound signal separation - AGC - sync separationhorizontal and vertical deflection circuits - EHT generation. Principle of color signal transmission and reception.

UNIT V HIGH DEFINITION TV

HDTV Standards & compatibility - colorimetric characteristics & parameters of HDTV LCD TVSystem - LCD Technology - LCD Matrix types & operations - LCD screen for TV. LCD color Receiver Plasma TVSystem: Plasma & conduction of charge - Plasma TV screen -Signal processing in Plasma TV - Plasma Colour Receiver Satellite TV - DTH Receiver System - CCTV – CATV - working of block converter- IR Remote control.

f) Correlation of Cos with POs and PSOs

g) Course Content

UNIT I INTRODUCTION TO SOFTWARE DEFINED RADIO

Components of Software Defined Radio, Need, Characteristics and Benefits of a SDR, Challenges and issues for the implementation of SDR, Design Principles, Specific Architecture and standards for SDR, Technology Tradeoff

UNIT II FUNCTIONAL BLOCKS IN SDR ARCHITECTURE

RF Front end Topologies, Power Amplifier, Band pass Signal Generation, Parameters of Data converters, ADC and DAC architectures, Direct Digital synthesis, PLL, Digital Hardware Choices – DSPs, ASICs, and FPGAs.

UNIT III SIGNAL PROCESSING IN SDR

Digital Signal Processing techniques for SDR, Reconfigurable processors, Multirate signal Processing: Sample Rate Conversion, Digital Filter banks, Polyphase Filters, Quadrature Mirror Filters (QMF) – Theory and Application – Wavelet for multirate signal processing. Timing recovery in digital receivers

UNIT IV SDR FOR WIRELESS COMMUNICATION

Characteristics of SDR in terms of baseband processing, Pulse Shaping, Matched Filtering, Baseband Modulation, Synchronization, and Multicarrier Communication: OFDM Transceiver, FBMC transceiver. RF implementation issues, Noise and nonlinear PreDistortion.

UNIT V APPLICATIONS OF SDR

5G services, Evolution of Cognitive Radio, Smart Antennas, Beam forming and MIMO. Case studies - Wireless Information Transfer System, JTRS, Spectrum Ware, SDR-3000 digital transceiver subsystem.

g) Course Content

UNITI EMI/EMC CONCEPTS

EMI-EMC definitions and Units of Parameters; Sources and Victim of EMI; Conducted and Radiated EMI Emission and Susceptibility; Transient EMI, ESD; Radiation Hazards.

UNITII EMI COUPLING PRINCIPLES

Conducted, Radiated and Transient coupling; Common ground impedance coupling; Common mode and Ground loop coupling; Differential mode coupling; Near field cable to Cable coupling, Cross talk; Field to Cable coupling; Power mains and Power supply coupling.

UNITIII EMI CONTROL TECHNIQUES

Shielding Material- Characteristics of Filters-Impedance and Lumped element filters-Filter installation and Evaluation; Grounding, Bonding, Isolation transformer, Transient suppressors, EMC Gaskets.

UNITIV EMC DESIGN OF PCBS

EMI Suppression Cables-Devices-Transient protection hybrid circuits; PCB Trace impedance; Routing; - Electromagnetic Pulse-Noise from Relays and Switches, Power distribution decoupling; Zoning; Grounding; Vias connection; Terminations.

UNITV EMI MEASUREMENTS AND STANDARDS

Open area test site; TEM cell; EMI Test Shielded chamber and Shielded Ferrite Line anechoic chamber; Tx/Rx Antennas, Sensors, Injectors / Couplers, and Coupling factors; EMI Rx and Spectrum analyzer; Civilian Standards-CISPR,FCC, IEC, EN; Military Standards –Frequency Allocation and Spectrum Utilization comparisons.

g) Course Content

UNIT I MIMO CHANNEL MODELS

Diversity-multiplexing trade-off, transmit diversity schemes, advantages and applications of MIMO systems, Fading Channel Models: Uncorrelated - fully correlated - separately correlated - keyhole MIMO fading models, parallel decomposition of MIMO channel, Error/Outage probability over fading channels.

UNIT II MIMO CHANNEL CAPACITY

Capacity and Information rates of AWGN and fading channels, deterministic, random MIMO channels, independent identically distributed channels, separately correlated Rayleigh fading MIMO channels, Capacity of non-coherent MIMO channels, keyhole Rayleigh fading MIMO channel

UNIT III SPACE-TIME BLOCK AND TRELLIS CODES

Alamouti scheme: Transmission scheme-Optimal receiver for Alamouti scheme, Performance analysis of Alamouti scheme. Orthogonal space-time block codes: Linear orthogonal design-Decoding of linear orthogonal design- Performance analysis of Space-time block codes. Space-time trellis codes: Performance analysis for Space-time trellis codes.

UNIT IV MIMO DETECTION TECHNIQUES

Maximum Likelihood, Zero Forcing, Minimum Mean Square Error, Successive Interference Cancellation, Lattice Reduction based detection, Iterative Decoding: Turbo coded modulation for MIMO channel.

UNIT V ADVANCED MIMO SYSTEM

Spatial modulation, MIMO based cooperative communication and cognitive radio, multiuser MIMO, cognitive-femtocells and large MIMO systems for 5G wireless, Wi-Fi, Multiuser and Hybrid beamforming in Massive MIMO.

UNIT I LOOP ANTENNAS

Small Circular Loop - Circular Loop of Constant Current - Circular Loop with Nonuniform Current - Ground and Earth Curvature Effects for Circular Loops - Polygonal Loop Antennas - Ferrite Loop - Mobile Communication Systems Applications.

UNIT II ANTENNAS ARRAYS

Array pattern synthesis, Fourier series method, Chebyshev arrays, super directive arrays - Feed networks for arrays - Butler Matrix, Parasitic Arrays - Phased Arrays - retrodirective arrays - adaptive arrays

UNIT III MICROSTRIP ANTENNA

MSA: Basic characteristics, Feeding methods, method of analysis – Design of rectangular and circular patch antenna – Tapered slot antennas – Leaky wave structures – elliptically polarized antennas.

UNIT IV MODERN PRINTED ANTENNAS AND MATERIALS

Broadband antennas - Antenna design - Meta materials- Electromagnetic band gap – Artificial Magnetic surface – Frequency selective surface – Photonic band gap – Fractal antennas.

UNIT V APPLICATIONS

SIW Micro strip antennas for RADAR applications – UWB antenna for surface and Ground penetrating radars – RFID antenna: Working principles, Frequency band and its Design –Radio navigation satellite system antenna: Frequency bands – IoT antennas.

g) Course Content

UNIT I BASICS OF RADAR AND EW SYSTEMS

9

9

9

9

Fundamentals of radar: Basic T/R module, range performance, Radar Cross Section(RCS) of targets - Radar detection: Bayes's concept and detection of multiple targets - Stealth target detection: early warning systems, detection and classification - Doppler radar transmitter and receiver operation, MTI and Pulse Doppler Radar- Radar performance in EW systems:ECM, ESM, ECCM.

UNIT II SURVEILLANCE AND TRACKING RADAR FOR EW SYSTEMS 9

Ground moving target radar - synthetic aperture radar- miniaturized radars for surveillance and imaging - Electronic scanning - angle measurement and tracking by conical scan and monopulse radar - Moving Target Tracking (MTT) - Synthetic Aperture Radar (SAR) imaging - Coherent Change Detection (CCD) and synthetic monopulse.

UNIT III ADVANCED RADAR SYSTEMS

Low Probability of Intercept (LPI) Radars: LPI radar concepts, LPI early warning systems, detection and avoidance techniques - Quantum Radar: detection and tracking of stealth targets - Cognitive Radar: radar signal processing and adaptive waveform - Foliage Penetration Radar: detection of objects, vehicle and other objects inside foliage.

UNIT IV EW ANTENNAS

Broadband blade monopole and dipole antennas: structure and working, design techniques and applications in monitoring and direction finding systems - HF DF loop array active antenna - Active VHF/UHF Antenna: concept, performance metrics- Polarization agile sinuous antenna: principles, applications in electronic warfare and signal intelligence.

UNIT V MODERN ANTENNAS FOR EW SYSTEMS

Metamaterial (MM) based antenna: design principle and advanced concepts, MM antenna for RCS reduction - Shared Aperture Antenna: array configurations and beamforming techniques- Reflect Array antennas - multiband antenna and reconfigurable antenna for multifunction radars.

Course Code	Course Title	L	Т	Р	С
10212EC109	EMBEDDED SYSTEM DESIGN	3	0	0	3

Programme Elective

b) Preamble:

The objective is to impart the concepts and architecture of embedded systems and to make the students capable of designing embedded systems. The course examines contemporary issues and problems in the design, development, and test of contemporary real-time embedded systems while emphasizing solid design practices to ensure safety and reliability.

c) Prerequisite Courses:

Microprocessor & Microcontroller

d) Related Courses: Nil

e) Course Outcomes:

Upon the successful completion of the course, students will be able to:

CO Nos	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the functional blocks of an embedded system and its software development processes.	K2
CO2	Relate the safety, security, reliability, and robust design of an embedded system	K2
CO3	Outline the embedded system design failure analysis.	К2
CO4	Summarize the embedded system design life cycle models.	K2
CO5	Infer the co synthesis, co- simulation and co-verification process.	K2

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO4	L	M	Н	-	-	-	-	-	-	L	-	-	М	-
CO5	-	-	М	-	Н	-	-	-	-	L	-	М	М	L

g) Course Content:

UNIT-I FUNDAMENTALS OF EMBEDDED SYSTEM

Overview of Embedded System– Processor-Memory-Peripherals- Software-Algorithms-Microcontroller-Microprocessor based – Board based.

Compilation Process in Embedded System –Compiling code-preprocessorcompilation, linking and Loading-Symbols, references and relocation-linker/loader.

Debugging Techniques: High Level language simulation – low level simulation – onboard debugger – task level debugging – symbolic Debug-Emulation.

UNIT-II SAFETY, SECURITY, RELIABILITY, AND ROBUST DESIGN

Safety- Reliability- Faults, Errors, and Failures- Safe, Secure, and Robust Designs- System Functional Level Considerations- System Architecture Level Considerations- Busses – The Subsystem Interconnect- Data and Control Faults – Data Boundary Values- Data and Control Faults – The Communications Subsystem

UNIT-III FAILURE ANALYSIS

The Power Subsystem- Peripheral Devices – Built-In Self-Test (BIST)- Failure Modes and Effects Analysis- Understanding The Problem – Analyzing the Problem – Looking At Potential Vulnerabilities- Looking At The Attacks- Protecting Against The Attacks.

UNIT-IV LIFE-CYCLE MODELS

Waterfall Model- V Cycle Model- Spiral Model- Rapid Prototyping Incremental- Problem Solving Six Steps to Design- Traditional Embedded Systems Development- Co-Design Process.

UNIT-V CO-SYNTHESIS, SIMULATION AND VERIFICATION

Co-Synthesis: Software Synthesis –System Characterization, Scheduling and Synthesis methods, Analyzing the System Design – Static and Dynamic analysis

9

9

9

9

Co-Simulation: Types of Simulations, Approaches –detailed processor model, Bus model, compiled model, hardware model, master slave model and distributed Co simulation

Co-verification: Hardware Software Co-verification, Tools supporting and verification, capitalization and reuse, requirements traceability and management and Archiving the project.

Total-45 Hours

g) Course Content

UNIT I FUNDAMENTALS OF ROBOTICS

Brief history-Types of Robots–Technology-Robot classifications and specifications, Evolution of robotics ,Design and control issues, Cartesian, Cylindrical, Spherical Work Envelope, Types of joints, Prismatic, Revolute, Ball and socket, Number of Axes, Degree of freedom, Joint variables, Grippers - Mechanical Grippers, Pneumatic and Hydraulic Grippers, Magnetic Grippers, Vacuum Grippers

UNIT II SENSORS AND ACTUATORS

Sensors:

Measurement characteristics: Range, response time, Accuracy, Precision, Sensitivity, resolution, linearity, error, Dead time, costs and uncertainty. Position and Odometry Sensors. Beacons and Range Sensors: Doppler Sensors, Haptic sensors. Touch Screen/ Touch Panel. Actuators:

Solenoids, DC motor, AC motor, Servomotors, Stepper motor, BLDC Motors, speed control, Pulse width modulation (PWM) frequency drive, Pneumatics & Hydraulic Systems, directional & pressure control valves, Drive mechanisms: Lead screw, Ball screw, Chain linkage, belt drive and gear drives

UNIT III ROBOT KINEMATICS

Robot anatomy, Design and control issues, Manipulation and Control. Direct Kinematic Model - Denavit-Hartenberg Notation, Kinematic Relationship between adjacent links, Manipulator Transformation Matrix; Inverse Kinematic Model

UNIT IV ROBOT PROGRAMMING & ROBOT CONTROLLERS

Robot Programming & Robot Controllers: Teach-in, Teach-Through, High-Level languages -

10

9

9

robot talk, programming methods, Software speedup, Robot Controllers – essential components, joint actuation and Sensing, Overload, over current and stall detection methods, Position, Speed, Direction Sensing. Programming Language: Variable Assembly Language (VAL), RAIL, A Manufacturing Language (AML).

UNIT V APPLICATIONS OF ROBOTICS

Application of Robots in continuous arc welding, Spot welding, Spray painting, assembly operation, cleaning, robot for underwater applications, Mobile robots, walking devices, Robot reasoning.

g) Course Content

UNIT I SERIAL AND PARALLEL COMMUNICATION

Communication Basics, Serial/Parallel communication: Serial communication protocols – RS232, Synchronous Serial Protocols: Serial Peripheral Interface (SPI), Inter Integrated Circuits (I2C), PC Parallel port communication: ISA/PCI Bus protocols.

UNIT II USB BUS

Introduction to USB – Bus components – USB communication model and framework – Physical and signalling environment – USB Transfer types – USB transactions – error recovery –USB device configuration.

UNIT III CAN BUS

Introduction to CAN bus – CAN standard – CAN controller and bus adapter – device drivers – interaction layer – Protocol Stack implementation and Configuration – CANopen architecture and standards.

UNIT IV ETHERNET BASICS

Elements of a network – Inside Ethernet – Building a Network: Hardware options – Cables, Connections and network speed – Design choices: Selecting components –Ethernet Controllers – Using the internet in local and internet communications – Inside the Internet protocol.

UNIT V EMBEDDED ETHERNET

Exchanging messages using UDP and TCP, Serving web pages with Dynamic Data, Serving web pages that respond to user Input, Email for Embedded Systems, Using FTP, Keeping Devices and Network secure.

UNIT I CAMERA CLASSIFICATION

Introduction, Analog camera, Digital Camera, Wired Camera, Wireless camera, HD Camera, IP/Network Cameras, Indoor/Outdoor Cameras, Pan/Tilt/Zoom Cameras and smart cameras.

UNIT II DIGITAL VIDEO HARDWARE AND FOREGROUND EXTRACTION 9

Evolution of Video Surveillance Hardware, selection of Right Cameras, PTZ Protocols and Communications, Two-Way Audio, Configuring and Commissioning Digital Video Encoders, Digital Video Cables and Connectors. Foreground Extraction- Background estimation, Averaging, Gaussian Mixture Model, Optical Flow based, Image Segmentation.

UNIT III VIDEO MANAGEMENT SYSTEMS (VMS) AND SECURITY

Introduction to VMS, Dual VMS, Video Analytics, Troubleshooting VMS Requirements, Portable Observation Device (POD), Edge Recording, storage and Security. Video Analytics for Security - Abandoned object detection, human behavioral analysis, human action recognition, perimeter security.

UNIT IV VIDEO NETWORKING

Introduction, Power of the Network, Networked Video Delivery Methods, Interference, Line of Sight (LOS), Wireless Mesh Networking.

UNIT V CLOSED-CIRCUIT TELEVISION (CCTV) SYSTEMS

Characteristics of CCTV System Design, Components of CCTV, CCTV system design, case studies of ATM and Vehicle parking system. Video Analytics for Traffic Monitoring and Assistance – Case Study.

g) Course Content

UNIT I INTRODUCTION TO WEARABLE DEVICES

9

9

9

Motivation for development of Wearable Devices, The emergence of wearable computing and wearable electronics, Types of wearable sensors: Invasive, Non-invasive; Intelligent clothing, Industry sectors' overview – sports, healthcare, Fashion and entertainment, military, environment monitoring, mining industry, public sector, and safety

UNIT II INERTIAL SENSORS AND APPLICATIONS

Wearable Inertial Sensors - Accelerometers, Gyroscopic sensors, and Magnetic sensors; Modality of Measurement- Wearable Sensors, Invisible Sensors, In-Shoe Force and Pressure Measurement; Applications: Fall Risk Assessment, Fall Detection, Gait Analysis, Quantitative Evaluation of Hemiplegic and Parkinson's Disease patients. Physical Activity monitoring: Human Kinetics, Cardiac Activity, Energy Expenditure measurement: Pedometers, Actigraphs.

UNIT III BIOMEDICAL SENSORS FOR HEALTH CARE

Wearable ECG devices: Basics of ECG and its design, Electrodes, and the Electrode–Skin Interface; Wearable EEG devices: Principle and origin of EEG, Basic Measurement set-up, electrodes, and instrumentation; Wearable EMG devices: EMG/ SEMG Signals, EMG Measurement – wearable surface electrodes, SEMG Signal Conditioning. Wearable Blood Pressure (BP) Measurement, Body Temperature sensor.

UNIT IV TRACKING, NAVIGATION, AND ENVIRONMENTAL 9 MONITORING 9

Wearable devices with Global Positioning System (GPS) integration for tracking and navigation. Wearable Optical Sensors -chemical sensors, optical glucose sensors, UV exposure indicators, speech recognition using lasers; Photoplethysmography (PPG), 3D imaging and motion capture.

UNIT V ROLE OF WEARABLE SENSORS IN META WEARABLES, SOCIAL ASPECTS AND HEALTH MONITORING

Role of Wearable sensors, Attributes of Wearable sensors, The Meta Wearables – Textiles and clothing, Social Aspects: Interpretation of Aesthetics, Adoption of Innovation, On-Body Interaction, Google Glass, health monitoring.

Course Code	Course Title	L	Т	Р	С
10212EC114	PROCESS CONTROL	3	0	0	3

a) Course Category Programme Elective

b) Preamble

This course aims to provide basic knowledge on various process control elements and controllers to solve real world engineering problems in an efficient manner. The course also aims to give an insight into industrial process modelling for level, flow, pressure, and temperature processes. It also discusses various control schemes, controller tuning, process control instrumentation, industrial communication protocols and industrial control schemes.

c) Prerequisite

Control Systems

d) Related Courses

Analog Electronics, Linear Integrated Circuits and Data Communication Networks.

e) Course Outcomes

On successful completion of this course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the fundamental concepts of process control and mathematical modelling of industrial processes.	K2
CO2	Outline the basic control actions, continuous controllers and composite controllers.	K2
CO3	Illustrate the performance criteria and controller tuning methods for feedback controllers.	K2
CO4	Summarize the various industrial sensors, final control elements and communication protocols in process control instrumentation.	К2
CO5	Compare the various industrial control schemes and their applications.	К2

g) Course Content

UNIT I

INTRODUCTION TO PROCESS CONTROL AND PROCESS MODELLING

9

9

9

Review of Control System Block diagram - Need for process control – Terms and Objectives -Interacting and non-interacting systems – Continuous and batch processes – Self regulation – Servo and regulatory operations- Process lag, load disturbance and their effect on processes -Mathematical model of flow, Level, Pressure and Thermal processes

UNIT II FEEDBACK CONTROLLERS

Basic control actions: two position (ON/OFF), multi-position control - Continuous controller modes: proportional, integral, and derivative – P, PI, PID: Composite controller modes, electronic controllers - Advantages and limitations of various control strategies - Measures to overcome the limitations.

UNIT III TUNING OF CONTROLLERS

Need for controller tuning – Performance criteria for controllers: Quarter Decay Ratio, IAE, ISE and ITAE - Types of controller tuning: Process reaction curve method, Continuous cycling method and Damped oscillation method.

UNIT IV PROCESS CONTROL INSTRUMENTATION IN PLANT DESIGN

Sensors and transducers for Industrial Variables: pressure, flow, level and temperature - Final control elements: I/P converter, P/I converter, Pneumatic and electric actuators, Control Valves - Industrial Communication Protocols.

UNIT V INDUSTRIAL CONTROL SCHEMES

9

Total:45 Hours

Cascade control – Feed forward control- Ratio control – Interference control – Adaptive Control - Process Automation: Role of Digital Computer in process control - Distributed Instrumentation and control system: PLC, DCS and SCADA.

Program Elective

b) Preamble

The main aim of this course is to provide learners with practical skills and a strong foundation that they can build upon to start producing well written code from the scratch. This course assumes prior knowledge of neither cortex-m nor embedded-c programming. This Course will provide an ideal platform for the applications, and has been developed to be fully programmable in C making it widely accessible to embedded software engineers.

c) Prerequisite Courses

Microprocessor and Microcontroller

d) Related Courses

Embedded OS and Device Drivers, System on Chip Internet of Things

e) Course Outcome:

Upon the successful completion of the course, students will be able to:

CO Nos.	Course Outcome	Knowledge Level (Based on revised Bloom's Taxonomy)
CO1	Explain the Embedded System development life cycle and ARM Cortex architecture.	K2
CO2	Outline Embedded C programming components and concepts.	K2
CO3	Apply Embedded C programming concepts to interface peripherals with ARM CORTEX M4 series	К3
CO4	Illustrate Embedded C programming concepts to interface Communication peripherals of ARM CORTEX M4.	К2
CO5	Construct the real time applications using ARM CORTEX M4.	К3

g) Course Content:

UNIT 1 BASICS OF EMBEDDED SYSTEM

Embedded System Overview: Design flow, Introduction to C, Software development process – **ARM Hardware architecture overview and Selection:** ARM Classic, Secure Core, Cortex M Series, Cortex R Series, Cortex A Series. Introduction to Cortex M4.

UNIT 2 EMBEDDED C PROGRAM STRUCTURE AND COMPONENTS 6

Basic Structure, Data Types, Operators and Expressions, Identifiers, Name space & Scope, Flow controls, Loops – **Components:** Comments, Global Variables, Local Variables, Main Function.

UNIT 3 PERIPHERAL PROGRAMMING

Interrupt programming, General Purpose Digital Interfacing, General Purpose Analog Interfacing: A-D interfacing, D-A interfacing, Timers control, Signal generators, PWM.

UNIT 4 COMMUNICATION PROTOCOL PROGRAMMING

Serial Communication: Universal Asynchronous Receiver Transmitter (UART), Serial Peripheralinterface (SPI), Inter Integrated Circuits (I2C), Direct Memory Addressing (DMA).

UNIT 5 APPLICATIONS

Tone Generation, Pseudo Code Generation, Event Recorder, Watchdog timer, Interfacing Digital & Analog Sensor, Actuator Control.

Total:30 Hours

- 3. Useful links to other user manuals: http://www.keil.com/arm/man/arm.htm

LIST OF EXPERIMENTS

Write an embedded C code using ARM CORTEX M4 development board

- 1. Toggle the GPIO with delay.
- 2. Display the alpha numeric characters in LCD
- 3. Matrix keypad Interfacing
- 4. Stepper Motor Interfacing
- 5. Characters Display in UART terminal
- 6. Analog to Digital Conversion
- 7. Digital to Analog Conversion
- 8. Audio signal generation
- 9. Watch dog timer
- 10. Real time Clock

Total:30 Hours

ASI M. 102. 1

Course Code	Course Title	L	Т	Р	С
10212EC205	EMBEDDED LINUX AND DEVICE DRIVERS	1	0	4	3

Program Elective

b) Preamble

This course introduces the fundamentals of embedded Linux, tool chain development and device driver development principles for real time embedded applications.

c) **Prerequisite**

Microprocessor and Microcontroller

d) Related Courses

Embedded OS and Device Drivers

e) Course Outcome

On successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Skill Level (Based on Dave's Taxonomy)			
CO1	Demonstrate an embedded Linux system.	K2, S3			
CO2	Simulate an embedded Linux device driver application.	K2, S3			
CO3	Develop an embedded Linux based system or device driver to demonstrate a sustainable system incorporating the legal and safety standards while handling open source tools.	K2, S3			

f) Correlation of COs with POs and PSOs

CO3	М	М	Н	Н	Н	-	-	L	L	L	-	Н	Н	Н
g) Course Content:

Theory

Operating system basics, difference between OS, Embedded OS and RTOS, Linux features, Linux hardware support, build system, host system and target system. Linux development toolchain, kernel compilation, file system types, boot loader. Loadable kernel modules, makefile, character device driver.

S. No.	Practical Exercises (60 Hours)	СО
1.	Understand basic Linux commands	CO1
2.	Build native toolchain	CO1
3.	Develop a host system	CO1
4.	makefile creation	CO1
5.	Native Compile Linux kernel and its C programming	CO2
6.	Build cross toolchain	CO2
7.	Cross compile Linux Kernel	CO2
8.	Configure target system bootloader	CO2
9.	Cross Linux C programming	CO2
10.	Emulate and deploy target Linux system	CO2
11.	Loadable Kernel module programming with makefile and argument passing	CO3
12.	GPIO device driver development	CO3
13.	LCD device driver development.	CO3
14.	Serial port device driver development.	CO3
15.	Project.	CO4

Course Code	Course Title	L	Т	Р	С
10212EC207	SYSTEM ON CHIP	1	0	4	3

Program Elective

b) **Preamble**

The primary focus of this integrated course "System on Chip" is the development of an embedded system using a current-day system on a chip (SoC) which consists of several different microprocessor subsystems together with memories and I/O interfaces. Students will also get an opportunity to design and implement the algorithms that are specific to real time systems/applications.

c) **Prerequisite**

Nil

d) Related Courses

Embedded System Design, Reconfigurable Computing with FPGA

e) Course Outcome

Upon the successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Skill Level (Based on Dave's Taxonomy)
CO1	Explain the functionality of ARM and PSOC architectures	S2
CO2	Implementation of interfaces on programmable SoC	S3
CO3	Demonstrate the programmable system on-chip interfacing with peripheral devices	S3

f) Correlation of COs with POs and PSOs

h) Course Content:

Theory

15 Hours

Introduction to System on Chip – Architecture – Components – Hardware and Software – Interconnections – Customization. ARM architecture – Organization and Implementation – Instructions – Assembly Language Programming – Processor Cores. PSoC Architecture – Structure – Modules – Interconnects – Memory Management – MultipleConfigurations – Project Running. APSoC Architecture – IP Creation – IP Integration – Implementation. Embedded System on SoC – Application – Automation.

S. No	CO Mapping	Practical Exercises (60 Hours)
1.	CO1	Introduction to Vivado Design Suite environment
2.	CO1	Synthesis and Implementation of Microblaze Processor.
3.	CO1	Creation of Custom IP Cores with the IP Integrator Utility.
4.	CO1	Creation of an Embedded Programmable System on Chip.
5.	CO2	Analog GPIO Driving using PSoC
6.	CO2	Digital GPIO Driving using PSoC
7.	CO2	Design and implementation of OpAmps for ADC using PSoC.
8.	CO2	Generation of PWM signal to drive servo motor using PSoC.
9.	CO2	Filter Design and Implementation using PSoC.
10.	CO2	Design and Implementation of DMA Controller using PSoC.
11.	CO2	Dynamic Reconfiguration using PSoC.
12.	CO3	Implementation of Arithmetic and Logical Unit in APSoC Architecture.
13.	CO3	Develop a System to Control the Speed of Motor in APSoC Architecture
14.	CO3	Interface a Temperature Sensor Module with APSoC architecture
15.	CO3	Design and Implementation of Embedded System on a Chip for Real Time Application

CO3	L	L	М	L	Η	М	L	L	М	М	L	М	М	М

g) Course Content:

THEORY

15 Hours

Introduction to Virtual Instrumentation: Virtual Instrumentation (VI) and its evolution, advantages of VI, block diagram and architecture of a virtual instrument, graphical programming, comparison with conventional programming, development of virtual instrument using GUI.

Programming techniques in LabVIEW: LabVIEW – Introduction, data types, front panel controls and indicators, block diagram, Sub VI, creating and Saving VI, Loops – For loop & While loop, Case Structures, arrays, Charts, Graphs, Formula nodes, case and Sequence structures – flat and stacked.

Data acquisition & Instrument Control: PC based Data acquisition, Sensors & transducers, Measurement & Automation Explorer (M&A), MyRIO, software and hardware installation, configuring data acquisition hardware using the drives in application software, hardware interfacing Interface standards, Instrument Control, VISA, Case Studies.

LIST OF EXPERIMENTS

60 Hours

List of Experiments	CO Mapping
Introduction to Graphical Programming (6 Hours)	
 Build a VI using Numeric controls and indicators to perform various arithmetic operations. Build a VI using Boolean controls and indicators to perform various Boolean operations. Build a VI using String controls and indicators to perform various String operations. 	CO1

Operations using Data Types (6 Hours)	
4. Create a Sub VI to compute area and volume of planes and solids.	
5. Develop a Sub VI using to solve a quadratic equation $ax^2 + bx + c = 0$	CO2
and display whether the roots are real or imaginary.	
6. Build a VI to implement and verify adder circuits using logic gates.	
Loops (6 Hours)	
7. Build a VI to monitor the level of tank using loop functions.	CO2
8. Simulate a VI to indicate charging of a battery level. Use appropriate	
functions and display notification messages.	
Arrays (6 Hours)	
9. Build a VI using to create a 1-D array. Perform the operations such as	
indexing, insertion, deletion and search of an element.	CO2
10. Build a VI to generate Fibonacci series using loop and array functions.	
11. Build a VI to perform sorting of given numbers in ascending order using	
loop and array functions.	
Case Structure (6 Hours)	
12. Build a VI for temperature monitoring system using Case structures.	CO2
Display the safe and emergency alarms using LEDs of varying colours.	
13. Design a VI to display a 7-segment LED using caste structures.	
Charts and Graphs (6 Hours)	
14. Simulate a sine wave and square of variable amplitude and frequency	
and display the waveform using graph. Manipulate the waveforms by	CO2
changing its width and colour.	
15. Develop a VI program to demonstrate Frequency modulation and	
amplitude modulation using Formula node.	
Sequence Structures (6 Hours)	
16. Build a VI for traffic light control for varying time delays using sequence	
structures.	CO2
17. Design a Ticket vending machine system using the concept of state	
machine in LabVIEW.	
18. Perform READ/WRITE operations on a file using sequence structures	
and loops.	
Clusters (6 Hours)	
19. Create a cluster to store information about students, such as name, age,	CO2
and CGPA. Implement a user interface to input and display student data.	
20. Create a VI to calculate Body Mass Index (BMI) using Clusters and	
Data Acquisition (12 Hours)	
Data Acquisition (12 Hours)	CO^{2}
21. Develop a VI to export data from DAQ assistant device and to	
spreadsheet.

g) Course Content

UNIT I HIGH SPEED NETWORKS

Introduction -frame relay networks –ATM protocol architecture -ATM logical connection –ATM cells- ATM service categories -AAL- high speed LANS: the emergence of high speed LANS -Ethernets -fiber channel-wireless LANS

UNIT II CONGESTION AND TRAFFIC MANAGEMENT

Queuing Analysis- Queuing Models – Single Server Queues – Effects of Congestion – Congestion Control – Traffic Management – Congestion Control in Packet Switching Networks – Frame Relay Congestion Control.

UNIT III TCP AND ATM CONGESTION CONTROL

TCP Flow control – TCP Congestion Control – Retransmission – Timer Management – Exponential RTO backoff – KARN's Algorithm – Window management – Performance of TCP over ATM.

Traffic and Congestion control in ATM – Requirements – Attributes – Traffic Management Frame work, Traffic Control – ABR traffic Management – ABR rate control, RM cell formats, ABR Capacity allocations –GFR traffic management.

UNIT IV INTEGRATED AND DIFFERENTIATED SERVICES

Integrated Services Architecture – Approach, Components, Services- Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ – Random Early Detection, Differentiated Services

9

8

12

UNIT V PROTOCOLS FOR QOS SUPPORT

RSVP – Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms – Multiprotocol Label Switching – Operations, Label Stacking, Protocol details – RTP – Protocol Architecture, Data Transfer Protocol, RTCP.

CO5	Н	_	L	L	L	-	_	-	L	L	-	L	L	L

g) Course Content

UNIT I BASIC CIPHERS

Services, Mechanisms and Attacks-The OSI Security Architecture – Network Security Model – Classical Encryption Techniques, Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Steganography.

UNIT II BLOCK CIPHERS

Block Ciphers- Simplified Data Encryption Standard - Data Encryption Standard - Block cipher principles block cipher modes of operation – Triple DES-Simplified Advanced Encryption Standard (AES), Blow Fish Algorithm.

UNIT III PUBLIC KEY SYSTEM

Public key cryptography: Principles of public key cryptosystems – The RSA algorithm-Key management – Diffie Hellman Key exchange - Elliptic curve arithmetic – Elliptic curve cryptography.

UNIT IV AUTHENTICATION SYSTEM

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC – MD5 – SHA– HMAC – CMAC – Digital signature and authentication protocols - Elliptic curve digital signature algorithm – DSS – El Gamal – Schnorr – Authentication applications – Kerberos– X.509 Authentication services and Network Access control.

9

9

9

UNIT V INTERNET AND MOBILE SECURITY

Internet Firewalls for Trusted System: Roles of Firewalls – Firewall related terminology – Types of Firewalls-Intrusion detection system – Virus and related threats – Countermeasures -Trusted systems, Email Security: Security Services for E-mail – attacks possible through E-mail – establishing keys privacy authentication of the source – Message Integrity – Non-repudiation, mobile device security, IP Security.

10212EC117	NETWORK MANAGEMENT	3	0	0	3

Program Elective

b) Preamble

This course provides the information about data communications and network management, SNMP, network management, tools, systems, engineering and applications.

c) Prerequisite

Nil

d) Related Courses

Data communication Networks, Internet of things

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Summarize the concept of communication protocols and networks architecture	K2
CO2	Explain network management organization models and functional models	K2
CO3	Infer network management tools and system utilities	K2
CO4	Interpret fundamental network management, architecture and applications	K2
CO5	Outline the ATM, broad band access and wireless network management.	K2

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

CO2	М	-	-	-	-	-	-	-	L	L	-	-	-	-
CO3	M	M	L	L	L	-	-	-	L	L	-	-	-	-
CO4	М	М	L	L	L	-	-	-	L	L	-	L	-	-
CO5	М	-	-	-	-	-	-	-	L	L	-	L	-	-

g) Course Content

UNIT I INTRODUCTION TO NETWORK MANAGEMENT

Network management overview: Analogy of telephone network management - Data and telecommunication network - Distributed computing - TCP/IP based networks - communication protocols and standards - Network management goals, organization architecture and perspectives.

UNIT II SNMP AND ITS MODELS

Review of information network and technology - SNMP and network management - basic foundations: Standards, models and languages - network management organization and information models - communication and functional models.

UNIT III NETWORK MANAGEMENT TOOLS, SYSTEMS AND ENGINEERING

System utilities management: basic tools - SNMP tools - Protocol analyzer - Network statistics measurement systems - MIB engineering - NMS design - Network management systems.

UNIT IV NETWORK MANAGEMENT AND APPLICATIONS

TMN - TMN conceptual model - standards - architecture - management service architecture - integrated view and implementation. Network management applications: configuration management - fault management - performance management - event correlation techniques – security management.

9

9

9

UNIT V ATM AND BROADBAND NETWORK MANAGEME

ATM Technology - ATM network management -cable modem technology - cable access network management - fixed broad band wireless access networks - mobile wireless networks.

Total: 45 Hrs

Course Code	Course Title	L	Т	Р	С
10212EC118	NEXT GENERATION MOBILE NETWORKS	3	0	0	3

Program Elective

b) Preamble

This course gives a comprehensive overview of the current state of the 5G landscape, covering everything from the most likely use cases, to a wide range of technology options and potential 5G system architectures, to spectrum issues.

c) Prerequisite

Nil

d) Related Courses

Internet of Things, Software Defined Networking

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Summarize the evolution of 5G systems, standardization and spectrum challenges.	K2
CO2	Explain the architecture of 5G and millimeter wave communication technologies.	К2
CO3	Outline the requirements and fundamental techniques for MTC and D2D communications.	K2
CO4	Classify the various radio access technologies for 5G networks.	K2
CO5	Illustrate the fundamentals, resource allocation and transceiver algorithms for massive MIMO.	K2

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	М	L	L	L	L	_	-	_	L	L	-	L	L	-
CO2	М	L	L	L	_	-	_	_	L	L	_	L	L	-

CO5	M	L	L	_	-	-	-	-	L	L	-	L	L	-

g) Course Content

UNIT I DRIVERS FOR 5G

Historical Trend for Wireless Communication - Mobile Communications Generations: 1G to4G – Evolution of LTE Technology to Beyond 4G – Pillars of 5G – Standardization Activities -Use cases and Requirements – System Concept – Spectrum and Regulations: Spectrum for 4G – Spectrum Challenges in 5G – Spectrum Landscape and Requirements – Spectrum Access Modes and Sharing Scenarios.

UNIT II 5G ARCHITECTURE AND MILLIMETER WAVE COMMUNICATION 9

5G Architecture: Software Defined Networking – Network Function Virtualization – Basics about RAN Architecture –High-Level Requirements for 5G Architecture – Functional Architecture and 5G Flexibility – Physical Architecture and 5G Deployment Millimeter Wave Communication: Channel Propagation – Hardware Technologies for mmW Systems – Deployment Scenarios – Architecture and Mobility – Beamforming – Physical layer Techniques

UNIT III MACHINE TYPE AND D2D COMMUNICATION

MTC: Use cases and Categorization – MTC Requirements – Fundamental Techniques for MTC – Massive MTC – Ultra-reliable Low-latency MTC D2D: from 4G to 5G – Radio Resource Management for Mobile Broadband D2D – Multi- hop D2D Communications for Proximity and Emergency Services – Multi-operator D2D Communication

9

UNIT IV 5G RADIO ACCESS TECHNOLOGIES

Access Design Principles for Multi-user Communications – Multi-carrier with Filtering – Non- orthogonal Schemes for Efficient Multiple Access – Radio Access for Dense Deployments – Radio Access for V2X Communication – Radio Access for Massive Machine-type Communication.

UNIT V MASSIVE MULTIPLE-INPUT MULTIPLE –OUTPUT SYSTEMS 9

MIMO in LTE – Single-user MIMO – Multi-user MIMO – Capacity of Massive MIMO – Pilot Design of Massive MIMO – Resource Allocation and Transceiver Algorithms for Massive MIMO – Fundamentals of Baseband and RF Implementation in Massive MIMO – Channel Models

CO5	Н	L	Н	L	L	М	-	L	L	L	-	L	-	-

g) Course Content

UNIT I **INTRODUCTION TO WBAN**

Introduction to WBAN -Standard-Architecture-WBAN Layers-Drawbacks of WBAN Network Topologies, Protocols and Standards-Network Topologies - Stand - Alone BAN, Wireless personal Area Network Technologies. Standards - IEEE 802.15.1, IEEE 802.15.13, IEEE 802.15.14, Zigbee, Healthcare system standards.

HARDWARE FOR WBAN UNIT II

Wireless communication – RF communication in Body, Wearable Antennas, Matching Network, Propagation, Materials, Base Station, Power considerations, Wireless communication technologies for wearable systems, Wireless Body Area Network - In body and on body communication.

UNIT III SIGNAL PROCESSING

Wearability issues -physical shape and placement of sensor, Technical challenges – sensor design, signal acquisition, Constraint on sampling frequency for reduced energy consumption, light weight signal processing, Rejection of irrelevant information, Data mining.

UNIT IV ENERGY HARVESTING FOR WEARABLE DEVICES

Solar cell, Vibration based, Thermal based, Human body as a heat source for power generation, Hybrid thermoelectric photovoltaic energy harvests, Thermopiles.

APPLICATIONS OF WBAN UNIT V

Monitoring patients with chronic disease, Hospital patients, Elderly patients, Cardiac arrhythmias monitoring, Multi patient monitoring systems, Multichannel Neural recording, Gait analysis, Electronic pill, Sports Medicine and Smart Fabrics.

similar 1 Selwin Mi

Head of the Department Bectronics & Communication Engineering

Course Code	Course Title	L	Т	Р	С
10212EC209	SOFTWARE DEFINED NETWORKING	2	0	2	3

Program Elective

b) Preamble

The primary aim of this course is to introduce about software defined networking, an emerging paradigm in computer networking that allows a logically centralized software program to control the behavior of an entire network.

c) Prerequisite

Data Communication Networks

d) Related Courses

Network Management, Internet of Things

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the key benefits of SDN by the separation of dataand control planes	K2
CO2	Outline the concepts of SDN data plane devices and Open flow Protocols	K2
CO3	Relate the SDN control plane with different controllers	K2
CO4	Summarize the Network services and applications in SDN	K2
CO5	Interpret the Network Functions Virtualization components and their roles in SDN	K2

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	М	-	-	-	-	L	-	-	L	L	-	-	-	-

g) Course Content

UNIT I SDN BACKGROUND AND MOTIVATION

Evolving network requirements-The SDN Approach: Requirements, SDN Architecture, Characteristics of Software-Defined Networking, SDN and NFV-Related Standards: Standards-Developing Organizations, Industry Consortia, Open Development Initiatives.

UNIT II SDN DATA PLANE AND OPENFLOW

SDN data plane: Data plane Functions, Data plane protocols, Open flow logical network Device: Flow table Structure, Flow Table Pipeline, The Use of Multiple Tables, Group Table- Open Flow Protocol.

UNIT III SDN CONTROL PLANE

SDN Control Plane Architecture: Control Plane Functions, Southbound Interface, Northbound Interface, Routing, ITU-T Model- Open Daylight-REST- Cooperation and Coordination among Controllers.

UNIT IV SDN APPLICATION PLANE

SDN Application Plane Architecture: Northbound Interface, Network Applications, User Interface- Network Services Abstraction Layer: Abstractions in SDN, Frenetic- Traffic Engineering Measurement and Monitoring- Security- Data Center Networking- Mobility and Wireless.

Total: 30 Hrs

6

6

6

UNIT V NETWORK FUNCTIONS VIRTUALIZATION

Background and Motivation for NFV- Virtual Machines- NFV Concepts: Simple Example of the Use of NFV, NFV Principles, High-Level NFV Framework, NFV Benefits and Requirements.

h) Laboratory

Total: 30 Hrs

S. No	Practical Exercises	Course Outcome
1	Network Topology creation and REST API introduction.	CO2
2	Create a network and run a simple performance test.	CO2
3	Dynamically change the forwarding rules.	CO2
4	Mininet Random Topology Generator.	CO2
5	Influencing flows via c URL commands.	CO3
6	Use -ovs-vsctl command to directly control open v switch.	CO3
7	Dynamically change the network parameters-link delay analysis.	CO4

List of experiments

Total: 60 Hrs

g) Course Content

UNIT I INTRODUCTION TO COGNITIVE RADIO

Introduction –Software Defined Radio: Architecture–Digital Signal Processor and SDR Baseband architecture – Reconfigurable Wireless Communication Systems – Digital Radio Processing –Cognitive Radio: Cognitive radio Framework – Functions – Paradigms of Cognitive Radio

UNIT II SPECTRUM SENSING

Introduction –Spectrum Sensing – Multiband Spectrum Sensing – Sensing Techniques – Other algorithms -Comparison – Performance Measure & Design Trade-Offs: Receiver operating characteristics – Throughput Performance measure –Fundamental limits andtrade-offs

UNIT III COOPERATIVE SPECTRUM ACQUISITION

Basics of cooperative spectrum sensing–Examples of spectrum acquisition techniques – cooperative transmission techniques – sensing strategies– Acquisition in the Presence of Interference: Chase combining HARQ – Regenerative cooperative Diversity– spectrumoverlay– spectrum handoff

UNIT IV MAC PROTOCOLS AND NETWORK LAYER DESIGN

Functionality of MAC protocol in spectrum access –classification –Inter frame spacing and MAC challenges – QOS –Spectrum sharing in CRAHN –CRAHN models – CSMA/CA based MAC protocols for CRAHN – Routing in CRN–Centralized and Distributed protocols – Geographical Protocol

UNIT V TRUSTED COGNITIVE RADIO NETWORKS

Trust for CRN: Fundamentals – Models – Effects of Trust Management – Security properties in CRN – Route Disruption attacks –Jamming attacks –PU Emulation attacks.

g) Course Content

UNIT I INTRODUCTION

Introduction to Wireless Sensor Networks, Motivation, Performance Requirement, Wireless Sensor Network Architecture: Protocols and Standards - Sensing and Communication Range. Hardware components, Energy consumption of sensor nodes

UNIT II MAC PROTOCOLS FOR WSN

Medium Access Control Protocols for Wireless Sensor Networks Fundamentals of MAC Protocols, Performance Requirements, Types of MAC protocols-Schedule-Based and Random Access-Based Protocols.

UNIT III ROUTING PROTOCOLS FOR WSN

Routing Protocols for Wireless Sensor Networks Fundamentals of Routing Protocols, Performance Requirements, outing Strategies in Wireless Sensor Networks - Flooding and its variants, LEACH & LEACH-C Power-Efficient Gathering in Sensor Information Systems.

UNIT IV TRANSPORT LAYER IN WSN

Traditional Transport Control Protocols-TCP, UDP; Feasibility of Using TCP or UDP for WSNs, Transport Protocol Design Issues, Existing Transport Control Protocols-CODA (Congestion Detection and Avoidance), ESRT (Event-to-Sink Reliable Transport) Performance of Transport Control Protocols.

UNIT V LOCALIZATION AND APPLICATIONS

Localization approaches-proximity, trilateration and triangulation. Sensor node hardware-Berkeley Motes, Node levels of software platforms-NS2/NS3& Cup carbon Simulator-Case study: Clustering, Energy, Routing - Localization- QoS Models.

g) Course Content

UNIT I UNMANNED AERIAL VEHICLE

Difference between aircraft and UAV - Parts and functions of Fixed, Rotorcraft and flapping wing UAV – various History of UAV's, Types of Drones, Applications and Uses. Characteristics of Multi rotor vehicle, Fixed Wing vehicle, Flapping wing Vehicles and their applications – Defence, Civil, Environmental monitoring (physical, chemical and biological).

UNIT II PAYLOADS FOR UAV

Payloads – Classification of Payloads – camera – sensors – radars – various measuring devices – classification of payload based on applications – Hyper spectral sensors – laser detection and range – synthetic aperture radar – thermal cameras – ultra sonic detectors - case study on payloads.

UNIT III NAVIGATION AND GUIDANCE SYSTEM OF AERIAL ROBOT 6

Flight Control System –Path planning- Way point Navigation system-GPS – GCS-Telemetry – Transmitter & Receiver.

UNIT IV DRONE SOFTWARE TOOL AND TELEMETRY

Introduction to ArduPilot, System components, peripheral hardware, Mission planner, Mav Proxy. Wireless communication modules and topology, Zig-bee, Bluetooth, LORA, Zero power devices, Energy Harvesting technology.

6

6

6

Total: 30 Hrs

UNIT V PLANT HEALTH MONITORING AND TECHNOLOGIES FOR FARMING

Measurement of leaf health, chlorophyll detection, ripeness level, crop mapping, fertilizing, Drone technology for soil field analysis and assistive operations. Water quality monitoring, micro-irrigation system, solar pump and lighting system, Fencing, Android based automation, Agricultural Robots, Standards for agriculture

Laboratory

Programme Elective

b) Preamble

Advanced Digital Signal Processing provides knowledge about estimation and prediction of signals. It covers parametric and nonparametric models of spectrum estimation, linear prediction, adaptive filtering techniques and methods of signal analysis.

c) Prerequisite

Discrete Time Signal Processing

d) Related Courses

DSP Algorithms and Architecture, Estimation theory

e) Course Outcomes

On successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level(Based on Revised Bloom's Taxonomy)
CO1	Explain various power spectrum estimation techniques in system modelling.	K2
CO2	Describe various lattice filter structures for adaptive signal processing	K2
CO3	Apply the concepts of linear prediction and filtering on discrete time signals.	K3
CO4	Illustrate various adaptive filter algorithms and their applications.	K2
CO5	Make use of different transformation techniques for signal analysis	К3

	РО 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

CO2	Н	М	М	М	L	-	-	-	L	L	-	L	L	М
CO3	Н	М	М	М	L	-	-	-	L	L	-	L	L	М
CO4	Н	М	М	М	L	-	-	-	L	L	-	L	L	М
CO5	Н	М	М	М	-	-	-	-	L	L	-	L	L	М

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I SPECTRUM ESTIMATION

Nonparametric Methods: Periodogram, Modified Periodogram, Bartlett method, Welch method, Blackman Tukey method, Performance comparisons-Parametric Methods: AR, MA, ARMA Signal modeling- The Yule Walker method for the AR model parameters- The Burg's method for the AR model parameters.

UNIT II LATTICE FILTERS

FIR Lattice Filter- Split Lattice Filter- IIR Lattice Filters: All-pole Filter, Other All-pole Lattice Structures, Lattice Filters Having Poles and Zeros- Lattice Methods for All-Pole Signal Modeling: The Forward Covariance Method, The Backward Covariance Method-Stochastic Modeling

UNIT III LINEAR PREDICTION AND FILTERING

Linear prediction: Forward Linear Prediction, Backward Linear Prediction- The Levinson-Durbin Algorithm- Wiener filter: FIR Wiener Filter, IIR Wiener Filter- Discrete Kalman Filter.

UNIT IV ADAPTIVE FILTERS AND APPLICATIONS

FIR Adaptive filters-Adaptive filters based on steepest descent method-LMS Adaptive algorithm -Adaptive channel equalization-Adaptive echo cancellation -Adaptive noise cancellation-Adaptive recursive filters –Recursive least squares: Exponentially Weighted RLS, Sliding Window RLS.

UNIT V TIME-FREQUENCY ANALYSIS

Short-Time Fourier Analysis: Time-Frequency Resolution, The Uncertainty Principle, The Spectrogram, Reconstruction- Spectral Subtraction based on the STFT-Wavelet Transform: Wavelets for Time-Scale Analysis, Wavelet Series, Discrete Wavelet Transform.

CO5	H	Н	H	L	-	-	-	-	L	L	-	L	L	L

g) Course Content

UNIT I REVIEW OF RANDOM VARIABLES

Introduction of Random Variables, Spectral Representation of Random Signals, Wiener Khinchine Theorem, Properties of Power Spectral Density, Gaussian Process and White Noise Process, Linear System with Random input, Spectral Factorization Theorem and its importance.

UNIT II PARAMETER ESTIMATION THEORY

Principle of Estimation and Applications, Properties of Estimates, Unbiased and Consistent Estimators, Minimum Variance Unbiased Estimates (MVUE), Cramer-Rao bound.

UNIT III PRACTICAL ESTIMATORS

BLUE, Maximum likelihood Estimators, Asymptotic Properties of MLE, Least Squares, Linear and Nonlinear Techniques, Method of Moments

UNIT IV BAYESIAN ESTIMATORS

Risk Functions, MMSE Estimators, MAP Estimators, Linear Bayesian Estimators, Vector Parameter Estimation, Sequential Estimators

UNIT V GAUSSIAN NOISE SIGNAL ESTIMATORS

Wiener Filters, Noise Cancellation, Lattice Representation for the FIR Wiener Filter, IIR Weiner Filter Kalman filters, MATLAB implementation of Wiener Filters

g) Course Content

UNIT I ARCHITECTURES FOR PROGRAMMABLE DIGITAL SIGNAL PROCESSORS

Basic Digital Signal Processor's Architectural Features – DSP Computational Building Blocks– Bus Architecture and Memory – Data Addressing Capabilities – Address Generation Unit – Programmability and Program Execution – Features for External Interfacing, Difference between DSP and other microprocessor architectures

UNIT II PROGRAMMABLE DIGITAL SIGNAL PROCESSORS

Introduction, Commercial digital Signal processing Devices, TMS320C67XX Processor: Data Addressing Modes- Memory Space-Program Control-Techniques for enhancing computational throughput, Detail Study of Instructions and Programming-On-Chip peripherals -Interrupts – Pipeline Operation.

UNIT III PERIPHERAL INTERFACING WITH DSP PROCESSOR

Introduction, Memory Space Organization, External Bus Interfacing Signals, Memory Interface, Parallel I/O Interface, Programmed I/O, Interrupts and I/O Direct Memory Access (DMA), Synchronous Serial Interface.

UNIT IV IMPLEMENTATION OF BASIC DSP ALGORITHMS

Introduction, the Q-notation, FIR Filters, IIR Filters, Interpolation and Decimation Filters (one example in each case), Poly-phase decomposition, Implementation of FFT Algorithms: Overflow and Scaling–Bit Reversed Index Generation–Implementation on the TMS320C67XX

9

9

9

UNIT V DEVELOPMENT TOOLS AND APPLICATIONS OF DSP PROCESSOR 9

DSP Development Tools – The DSP System Design Kit (DSK) – The Assembler and the Assembly Source File – The Linker and Memory Allocation – The Code Composer Studio. Building blocks involved in a DSP Based Bio-telemetry Receiver and Image Processing Algorithms.

g) Course Content

UNIT I SPEECH PRODUCTION AND PERCEPTION

Speech Production mechanism – Articulatory phonetics - Acoustic phonetics – Discrete time modelling of Speech production – coarticulation - prosody - Auditory perception – Human auditory system - perception of sound - psychoacoustics.

UNIT II SHORT TIME SPEECH ANALYSIS

Speech signal analysis – segmental, sub-segmental and supra-segmental levels - Methods for extracting the short time Energy, Average Magnitude – Zero crossing Rate – Short Time Auto Correlation Function – Pitch period estimation using Auto Correlation Function. Short time Fourier analysis – Formant Estimation, Mel Frequency Feature Extraction.

UNIT III SIGNAL PROCESSING METHODS FOR SPEECH RECOGNITION 8

Filter Bank Model for Speech Recognition – LPC model for speech recognition – Vector Quantization Model – Elements of VQ, Training, Similarity Measure and Clustering of Training vectors.

UNIT IV SPEECH RECOGNITION USING STATISTICAL MODEL 10

Introduction to Markov Chain – Hidden Markov Models – HMMs for speech Recognition Three basic problems in HMM – Types of HMMs – Implementation Issues - Language Models - Performance Measures for ASR systems.

8

UNIT V SPEECH RECOGNITION BASED ON CONNECTED WORD MODELS AND ITS APPLICATIONS

Isolated Word Recognition – Linear Time Warping, Dynamic Time Warping, Endpoint detection - Connected Word Recognition – two level dynamic programming algorithm, Level Building Algorithm - Command and Control Applications using isolated word recognition.

g) Course Content

UNIT I INTRODUCTION TO ARTIFICIAL NEURAL NETWORKS

Fundamentals of Neural Networks – Biological neuron – Artificial Neuron – Learning Methods – Activation functions -- Taxonomy of Neural Network Architectures – McCulloch Pitts model, linear separability, Hebb model – Applications

UNIT II FEED FORWARD NEURAL NETWORKS

Perceptron Models: Discrete, Continuous and Multi-Category – MLP – Training Algorithms of Perceptron Networks – Limitations of the Perceptron model – Adaline network, Medaline network, Generalized Delta Rule, Derivation of Back propagation (BP) Training algorithm

UNIT III OTHER ANN ARCHITECTURES

Associative Memory – Exponential BAM – Associative Memory for Real Coded Pattern Pairs – Applications Adaptive Resonance Theory – Introduction – ART 1 – ART2 – Applications – Neural Networks Based On Competition – Kohenen Self Organizing Maps – Learning VectorQuantization – Counter Propagation Networks – Industrial Applications.

UNIT IV DEEP LEARNING

Deep Feed Forward network, training deep neural networks, problem and solution of under fitting and over fitting, Cross validation, Regularization, Hyper parameters, Back propagation, Setup and initialization issues, vanishing and exploding Gradient problems, Gradient Descent strategies, Batch normalization, Case study on feed forward neural network : Loan approval.

UNIT V CONVOLUTIONAL NEURAL NETWORK

Introduction to Convolutional Neural Network, Architectural Overview, Layers, Filters, Convolution and Pooling Operation, Parameter sharing, Case Studies: AlexNet, GoogLeNet, Mobilenetv1, ResNet – Application: Object Detection.

g) Course Content

UNIT I FUZZY SET

Introduction–Basic definitions and terminology, Set-theoretic Operations, MF Formulation and Parameterization, MFs of one Dimension, MFs of two Dimension, Derivatives of Parameterized MFs, Fuzzy Complement, Fuzzy Intersection and Union, Parameterized T-norm and T-conorm.

UNIT II FUZZY INFERENCE SYSTEM

Extension Principle, Fuzzy Relations, Linguistic variables, Fuzzy If-Then Rules, Composite rule of inference, Fuzzy Reasoning, Mamdani Fuzzy Models – Other variants, Sugeno Fuzzy Models– Tsukamoto Fuzzy Models.

UNIT III NEURAL NETWORKS

Mcculloch-Pitts Neuron, Linear Separability, Hebb Net, Supervised Learning Network: Perceptron, Adaline, Backpropagation Multilayer Perceptron, Radial Basis Function Networks, Unsupervised Learning Network: Competitive Learning Networks, Kohonen Self-Organizing Maps, Hebbian Learning, Principal Component Networks, The Hopfield Network

UNIT IV ADAPTIVE NEURO-FUZZY INFERENCE SYSTEMS AND APPLICATIONS 9

Adaptive Neuro-Fuzzy Inference Systems – ANFIS Architecture, Hybrid Learning Algorithm, Applications: Printed Character Recognition,–Channel Equalization – Adaptive Noise cancellation

UNIT V NEURAL NETWORK AND FUZZY LOGIC APPLICATIONS

Neural network applications: Character Recognition, Signal Processing, Neural networks for visual recognition - Fuzzy logic applications: Fuzzy logic control and Fuzzy classification, Fuzzy logic as a tool for rain prediction.

g) Course Content

UNIT I PHYSIOLOGY AND COMPONENTS

Cell and its structure - sources of bioelectric potentials – resting and action potentials-propagation of action potentials nervous system – CNS – PNS – nerve cell – synapse – cardio pulmonary system –physiology of heart and lungs – circulation and respiration- block diagram of biomedical instrumentation system- transducers for biomedical applications-electrodes- selection criteria.

UNIT II NON ELECTRICAL PHYSIOLOGICAL MEASUREMENTS

ECG - EEG - EMG - ERG - lead systems and recording methods - typical waveforms. Measurement of blood pressure - cardiac output - cardiac rate - heart sound -respiratory rate - Plethysmography - pH of blood, ESR - GSR measurements

UNIT III MEDICAL IMAGING SYSTEMS

Picture archiving and communication system (PACS)-Principles of sectional imaging, scanner configuration, detectors - 2D image reconstruction technique, X-Ray imaging- Computer Tomography-Ultrasound scanner–PET scan–MRI Imaging.

UNIT IV SPECIAL IMAGING TECHNIQUES

Cine radiography, cine fluorography, stereoscopic radiography, magnification radiography, microradiography, tomography, neutron radiography. Cine angiogram– LASER imaging endoscopy.

9

9

9

UNIT V THERAPEUTIC EQUIPMENT & SAFETY MEASURES

Physiotherapy and electrotherapy - short ware, microwave diathermy –defibrillators – cardio vectorhearing aid – dialysis machine, pace makers. patient safety & monitoring – electrical safety, patient electrical safety, types of hazards, natural protective mechanism, leakage current, patient isolation, hazards in operation rooms, grounding conditions in hospital environment.

g) Course Content

UNIT I QUANTUM BUILDING BLOCKS

The Quantum Mechanics of Photon Polarization, Qubit: The qubit state - matrix and Bloch sphere representation - computational basis – unitary evolution. Multi-qubit states - No-cloning theorem - Superdense coding - Pure states to Bell states – Bell inequalities.

UNIT II QUANTUM STATE TRANSFORMATIONS

Unitary Transformations, Quantum Gates, Unitary Transformations as Quantum Circuits, Reversible Classical Computations to Quantum Computations, Language for Quantum Implementations.

UNIT III QUANTUM ALGORITHMS

The Complexity Classes P and NP, Deutsch's algorithm, Complexity Notions, Quantum Fourier Transformations, Shor's Algorithm and Generalizations, Grover's Algorithm and Generalizations, Application of Deutsch-Jozsa algorithm for Formal Language Analysis

UNIT IV QUANTUM ENTANGLEMENT AND ERROR CORRECTION

Quantum Subsystems, Unentangled Qubits Calculation, Entangled Qubits Calculation, Entangled Quantum Clocks, Quantum Error Correction, Graph states and codes, Fault Tolerance and Robust Quantum Computing

UNIT V QUANTUM INFORMATION PROCESSING

Quantum Computing Limitations, Alternatives to the Quantum Computation Circuit Model, Quantum Protocols, Building Quantum Computers, Simulating Quantum Systems, Quantum Teleportation, Quantum Cryptography, Internet traffic interception via encryption using Shor's Algorithm

Course Code	Course Title	L	Т	Р	С
10212EC213	DIGITAL IMAGE AND VIDEO PROCESSING	2	0	2	3

Program Elective

b) Preamble

This course is designed to make the student to acquire an adequate knowledge of image processing, image transform, image enhancement, image restoration, image segmentation and image compression. Also, it inculcates the basic knowledge of video processing and motion estimation.

c) Prerequisite

Nil

d) Related Courses

Fundamentals of Machine Learning, ANN and Deep Learning

e) Course Outcomes

On successful completion of the course students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Illustrate the basic operations and suitable image transform operations on images	K2
CO2	Demonstrate various image enhancement and restoration techniques on images	K3
CO3	Experiment with the various image segmentation techniques on images	K3
CO4	Apply the various image compression techniques on images	K3
CO5	Compute the sampling of video signal and perform motion estimation	K3

f) Correlation of COs with Pos and PSOs

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

CO4	М	М	L	М	Н	-	-	L	L	-	-	L	L	L
CO5	М	L	L	М	Н	-	-	L	L	-	-	L	L	L

g) Course Content

UNIT I INTRODUCTION TO IMAGE PROCESSING AND IMAGE TRANSFORMS

Introduction- Image sampling- Quantization- Resolution- Image file formats- Elements of image processing system- Need for transform- Image transform: Discrete Fourier transform- Discrete cosine transform- Discrete Wavelet transform- Haar transform.

UNIT II IMAGE ENHANCEMENT AND RESTORATION

Image Enhancement: Spatial domain methods - Histogram processing- Fundamentals of Spatial filtering- smoothing spatial filters- Sharpening spatial filters. Frequency domain methods: image smoothing- image sharpening- Image Restoration: Image degradation- Image restoration model.

UNIT III IMAGE SEGMENTATION

Introduction - Point, Line and Edge Detection- Thresholding- Region-based segmentation: region growing-Region splitting and merging-Segmentation using morphological watersheds-The use of motion in segmentation

UNIT IV IMAGE COMPRESSION

Image Compression: need for image compression-Redundancy in images-Classification of redundancy in mages- compression models- lossless and lossy compression- Huffman coding-arithmetic coding - LZW coding- Run length coding - JPEG Standards.

UNIT V VIDEO PROCESSING AND MOTION ESTIMATION

Analog video- digital video- time-varying image formation models: Three-dimensional motion models- sampling of video signals- Motion estimation:Optical flow- general methodologies- pixel-based motion estimation- block- matching algorithm- mesh-based motion estimation- global motion estimation

Programme Elective

b) Preamble

This course is proposed to meet a growing professional need of individuals skilled in artificial intelligence, machine learning, statistical programming and other software skills. The course integrates theory and practice to enable the student to gain the necessary knowledge to compete in the ever changing work environment.

c) Prerequisite

Python Programming

d) Related Courses

ANN and Deep Learning

e) Course Outcomes

On successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Interpret the basic machine learning concepts for simple regression and classification problems.	K2
CO2	Utilize the principle and concepts of bayes decision theory for the implementation of prediction and classification problems.	K3
CO3	Make use of the linear and logistic regression models for the prediction and binary classification applications.	K3
CO4	Experiment with supervised learning algorithms for real time data classification.	К3
CO5	Apply unsupervised learning algorithms for real time clustering application.	К3

f) Correlation of COs with POs and PSOs

	PO	PO1	PSO	PSO										
	1	2	3	4	5	6	7	8	9	10	11	2	1	2

CO4	Μ	Μ	Μ	Μ	Н	L	-	L	L	L	-	Μ	М	Μ
CO5	Μ	Μ	Μ	Μ	Η	L	-	L	L	L	-	М	М	М

g) Course Content

UNIT I MACHINE LEARNING BASICS

Definition of learning systems- Designing a learning system- Learning paradigms: Supervised, Unsupervised and Reinforcement learning - Learning theory and Performance Metrics - Concepts of overfitting and underfitting, Regularization

UNIT II BAYESIAN DECISION THEORY

Bayes rule – Independence and conditional independence – Common discrete and continuous distributions – Bayesian concept learning - MAP estimation – Bayes classifier - Bayes estimators for common loss functions -The false positive Vs false negative trade off – Naïve Bayes model.

UNIT III LINEAR AND LOGISTIC REGRESSION

Simple linear regression –Multiple linear regression – F-tests – Least squares estimation-Logistic Regression Model–Multiple logistic regression - stepwise Logistic Regression- Best subset Logistic Regression

UNIT IV CLASSIFICATION ALGORITHMS

Introduction to Classification - k-Nearest Neighbor Algorithm - Decision Trees: Univariate, Multivariate trees, ID3 algorithm - Random Forests-Support Vector Machines.

UNIT V CLUSTERING AND DIMENSIONALITY REDUCTION

Introduction to clustering - Mixture densities - k-Means Clustering - Hierarchical Agglomerative Clustering - choosing number of clusters, Dimensionality Reduction - Need for Dimensionality Reduction – Subset Selection – Principal Component Analysis.

LIST OF EXPERIMENTS

Hardware requirement:

• i5 Processor, 8GB RAM, & Internet Connection

Software Environment:

• IDE recommended PYCHARM, JUPYTER

S. No.	Name of the Experiment				
	Program to perform/demonstrate				
1	Online retail case study using Python libraries.	CO1			
2	Simple classification using Naïve Bayes algorithm.	CO2			
3	Simple prediction using Naïve Bayes algorithm.	CO2			
4	Regression model for house price prediction.	CO3			
5	Multiple linear regression model.	CO3			
6	Binary and multiple logistic regression models.	CO3			
7	Logistic regression model for iris data.	CO3			
8	The working of the decision tree based ID3 algorithm.	CO4			
9	The random forest classifier for a sample training data set stored as a .CSV file format.	CO4			
10	Support Vector Machine based classification model.	CO4			
11	Clustering model for the medical data using hierarchical method.	CO5			
12	Principle Component Analysis on face recognition.	CO5

CO5	Н	М	L	-	Н	-	-	L	L	L	-	М	L	М

g) Course Content

UNIT I OBJECT ORIENTED PROGRAMMING WITH PYTHON

Class and objects, _init_ method, constructor, class with multiple objects, class attributes vs data attributes, types of variables, types of methods, inner class, encapsulation, inheritance, polymorphism.

UNIT II FILE PROCESSING

Processing different kinds of files: interacting with SQLite databases, creating and processing, XML files, CSV file reading and writing, basics logging facility for Python, configuration file parser. Communicating with a program's environment: interacting with the operating system, manipulating with dates and time, time access and conversions.

UNIT III PYTHON FOR DATA SCIENCE

Introduction to data science, Data science Packages: NumPy with Python – NumPy array creation using array () function and initial placeholder content, Basic arithmetic operations, Mathematical functions, Changing the shape of an array, stacking and splitting of arrays, Pandas series, data frame.

UNIT IV DATA VISUALIZATION IN PYTHON

Introduction to data visualization, Matplotlib, Line Plots, Area Plots, Histograms, Bar Charts, Pie Charts, Box Plots, Scatter Plots, Waffle Charts.

UNIT V PYTHON FOR NETWORKING

Introduction-Basics of sockets and methods-working with TCP socket-UDP socket, network analysis-port scanner-banner grabbing, sending Email-GUI programming-Tkinter.

f) **Correlation of COs with POs and PSOs**

Course Content g)

UNIT I POWER DISSIPATION IN CMOS

Sources of power dissipation - Needs for Low Power VLSI Chips - Physics of power dissipation in MOSFET devices: The MIS structure, Long channel MOSFET, Submicron MOSFET, Gate induced drain leakage - Power dissipation in CMOS: Short circuit dissipation, Dynamic dissipation, Load capacitance – Low power VLSI design limits: Principles of low power design, Hierarchy of limits, Fundamental limit, Material limit, Device limit, Circuit limit, System limit and Practical limits.

UNIT II DESIGN OF LOW POWER CIRCUITS

Transistor and Gate Sizing: Sizing an Inverter Chain, Transistor and Gate Sizing for Dynamic Power Reduction, Transistor Sizing for Leakage Power Reduction – Equivalent Pin Ordering -Network Restructuring and Reorganization: Transistor Network Restructuring, Transistor Network Partitioning and Reorganization - Special Latches and Flip-flops: Self-gating Flip-flop, Combinational Flip-flop, Double Edge Triggered Flip-flop - Low Power Digital Cell Library: Cell Sizes and Spacing, Varieties of Boolean Functions - Adjustable Device Threshold Voltage

UNIT III POWER OPTIMIZATION USING SPECIAL TECHNIQUES

Power reduction in clock networks: Clock gating, Reduced swing clock, Oscillator circuit for clock generation, Frequency division and Multiplication, Other clock power reduction techniques - CMOS floating node: Tristate keeper circuit, Blocking gate - Low power bus: Low swing bus, Charge recycling bus - Delay balancing - Low power techniques for SRAM: SRAM cell, Memory bank partitioning, Pulsed word line and reduced bit line swing.

9

9

UNIT IV ADVANCED LOW POWER TECHNIQUES

Adiabatic Computation - pass transistor logic synthesis - asynchronous circuits - energy recovery circuit design - designs with partially reversible logic: design with reversible logic, adiabatic dynamic logic, energy recovery SRAM core, and optimal voltage selection - supply clock generation.

UNIT V SOFTWARE DESIGN FOR LOW POWER

Sources of software power dissipation - Software power estimation: Gate level, Architecture level, Bus switching activity, Instruction level power analysis - Software power optimization: Minimizing memory access costs, Instruction selection and ordering, Power management - Automated low power code generation – Co-design for low power.

Program Elective

b) Preamble

This course introduces basic techniques and algorithms for physical design and optimization of VLSI circuits. The necessary background in graph theory and mathematical optimization, application of different analytical and algorithmic techniques to physical design of VLSI circuits will be studied. The students shall emphasize VLSI design issues encountered in deep sub-micron technology. Throughout the course, students will be exposed to research methodology and to a set of academic and commercial CAD tools for physical design.

c) Related Courses

Low Power VLSI Design, Analog VLSI Design

d) Course Outcome

Upon the successful completion of the course, students will be able to:

e) Pre requisite

VLSI Design

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the design automation algorithms and various constraints posed by VLSI fabrication and design technology	K2
CO2	Illustrate the layout optimization techniques and map them to the algorithms.	K2
CO3	Classify the design algorithms to meet the physical design parameters.	K2
CO4	Summarize VLSI interconnects and routing strategies in deep sub-micron.	K2
CO5	Relate sub-micron challenges and relate them to issues in physical synthesis of ICs.	K2

CO5	М	М	Η	Н	-	-	-	L	-	L	Н	М	L	-

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I DESIGN METHODS AND AUTOMATION TOOLS

Design domain sand Actions –Design methods and Technologies – Levels of abstractions in Design Automation tools – Graph terminology – data structures for the representation of graphs –Complexity Issues and NP-Hardness: algorithms for NP-hard problems– Graph Algorithms: Depth-First Search Algorithm, Breadth-First Search Algorithms and Dijikstra's Shortest path Algorithms.

UNIT II LAYOUT DESIGN

Design Rules – Symbolic Layout – Problem Formulation: Classification of Compaction algorithms- 3/2 dimensional compaction-2D compaction- Hierarchical compaction- Recent trends in Compaction, Informal Problem formulation, Graph theoretical formulation, Maximum design constraints, Algorithms for Constraint graph compaction.

UNIT III PLACEMENT, PARTITIONING AND PLANNING

Circuit Representation – Wire length estimation – Placement Problems – Placement Algorithms: Constructive placement, Iterative improvements – Partitioning: K-Lin Partitioning Algorithms – Floor planning concepts: Terminology and Floor plan representation, Optimization problems in Floor planning – Shape functions and Floor plan sizing.

10

8

UNIT IV ROUTING

Local routing problems – Area routing – Channel routing: Models, The vertical constraint graphs, horizontal constraints and left-edge algorithms, Channel Routing Algorithms – Global Routing: Standard cell layout, Building-block layout and Channel ordering, Algorithms for Global Routing: Problem definition and discussion, efficient rectilinear Steiner-Tree construction, Local transformations for Global Routing.

UNIT V SIMULATION, SYNTHESIS AND VERIFICATION

Gate level modelling: Signal Modelling, Gate modelling, Delay modelling, Connectivity modelling, Compiler driven simulation, Event driven simulation – Switch level modelling: Connectivity and Signal Modelling, Simulation Mechanisms – Combinational logic synthesis, Binary Decision Diagrams, Two level logic synthesis.

g) Course Content

UNIT I OVERVIEW OF WIRELESS COMMUNICATION SYSTEMS

Introduction of wireless system-Transmitter Back End-Quadrature LO generator- Receiver Front end- Filter Design-Rest of receiver front end: non idealities and design parameters-Derivation of Noise Figure (NF) and input third order Intercept points (IIP3) of receiver front end-Partitioning of required NF and IIP3 of receiver front end into individual NF and IIP3

UNIT II LOW NOISE AMPLIFIER AND POWER AMPLIFIER

Low Noise Amplifier – Matching Network-Wideband LNA –DC Bias-Gain and frequency Response- Noise Figure-Narrowband LNA-Impedance Matching- Matching of Imaginary and real Part- Interpretation of Power Matching-Power Amplifier Design-Specifications-Power output control- Class A Amplifiers-Class AB/B/C Amplifiers-Class E Amplifier.

UNIT III MIXERS

Active Mixer: Balancing Mixer-Qualitative Description of the Gilbert Mixer- Conversion Gain-Distortion-Analysis of Gilbert Mixer of Low Frequency Case and High-Frequency Case-Noise.

Passive Mixer: Switching Mixer – Distortion-Conversion Gain and Noise in Unbalanced Switching- Conversion Gain-Sampling Mixture-Gain-Distortion and noise in Single Ended Sampling Mixer.

UNIT IV FREQUENCY SYNTHESIZER

Phase Locked Loops-Phase Detector-VCO-Dividers-LC Oscillators-Ring Oscillators-Phase Noise- Loop Filter-First order filter-Second order filter-High Order filter-Design Approach: A complete synthesizer design example (DECT Application)-Implementation of a Frequency Synthesizer with a Fractional Divider Architecture

9

9

9

UNIT V VLSI ARCHITECTURE FOR WIRELESS COMMUNICATION 9

Design and Implementation of Ultralow-Power ZigBee/WPAN Receiver-Split- LNTA + 50% LO Receiver-Comparison of Split-LNTA + 50% LO and Single- LNTA + 25% LO" Architectures-Gain- NF-IIP3-Current and Voltage-Mode Operations-Circuit Techniques-Impedance Up-conversion

Matching- Mixer–TIA Interface Biased for Impedance Transfer Filtering- RC-CR Network and VCO co-design

g) Course Content

UNIT I BASICS OF SEMICONDUCTORS

Energy bands: metals, semiconductors and insulators, direct and indirect semiconductors, Charge carriers in semiconductors: electrons and holes, intrinsic and extrinsic material: nmaterial and p-material, carrier concentration: fermi level, electron and hole concentrations at equilibrium, temperature dependence.

UNIT II CARRIER TRANSPORT IN SEMICONDUCTORS

Conductivity and mobility: drift and resistance, effect of temperature and doping on mobility, high field effects, Generation and Recombination mechanisms of excess carriers: direct and indirect recombination, steady state carrier generation, quasi Fermi levels, Diffusion of carriers: diffusion processes, Einstein relations.

UNIT III PN JUNCTIONS

PN junctions: formation of junction, contact potential, electrical field, potential and charge density at the junction, space charge at a junction, energy band diagram, Ideal diode equation, electron and hole component of current in forward biased p-n junction, Reverse bias breakdown in p-n junctions: zener and avalanche break down.

UNIT IV BIPOLAR JUNCTION TRANSISTORS

Bipolar transistor action: Basic principle of operation, modes of operation, amplification with bipolar transistors, minority carrier distributions: forward active mode, other modes of operation.

9

9

9

UNIT V METAL INSULATOR SEMICONDUCTOR DEVICES AND MOSFET 9

Metal Insulator semiconductor devices: The ideal MOS capacitor, band diagrams at equilibrium, accumulation, depletion and inversion, surface potential, CV characteristics, effects of real surfaces, work function difference, interface charge, threshold voltage MOSFET scaling, short channel effects, Advanced MOSFETs – Fin FETs and Junction less FETs.

g) Course Content

UNIT I ALGORITHM TO EFFICIENT ARCHITECTURE MAPPING

One bit incrementer, n-bit incrementer and decrementer, ones' complement, two's complement, Single bit addition, sum of N -natural numbers, Resource sharing , prioritization, greatest common divisor (GCD).

UNIT II ADDER AND MULTIPLIERARCHITECTURE

Carry – Skip adder, Carry-Look ahead adder, Carry –Select adder, Array multiplication, squaring, shift and add multiplier, Tree Multiplier, Booth algorithm, Dadda multipliers

UNIT III EFFICIENT VLSI ARCHITECTURE FOR VARIOUS DSP BLOCKS 9

Reconfigurable constant Multiplier Design- common sub expression algorithm- 3 Tap FIR Filter architecture – Radix -2 FFT architecture design .Fixed point representation –optimum word length.

UNIT IV CORDIC ARCHITECTURE

CORDIC method, rotation and vectoring mode, convergence, precision and range, scaling factor and compensation, implementations: word-serial and pipelined– Micro rotation to Angel Recoding (MAR), Binary to Bipolar Recoding (BBR).

UNIT V ISSUES IN TIMING CLOSURE

Static and Dynamic timing analysis, System Considerations - edge triggered, clock skew, handling asynchronous inputs, sequential machine, clock cycle time, Violation – maximum propagation delay, race through, Re-timings.

Course Code	Course Title	L	Т	Р	С
10212EC132	NANO SCALE TRANSISTORS	3	0	0	3

Program Elective

b) Preamble

This course provides insight to the fundamentals of novel transistors and impinges the basics of multigate MOS system and its working. Various Nanowire FETs along with their performance evaluation is analyzed so as to study the radiation effects of MOSFETs. Further discussion is to design the circuits using the concepts of multigate devices and the ways to reduce short-channel effects.

c) Prerequisite

Nil

d) Related Courses

Solid state devices

e) Course Outcomes

On successful completion of this course the student will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain about the various novel MOSFETs to tackle short channel effects	K2
CO2	Interpret the physics of multigate MOS system	K2
CO3	Summarize the performance of Nanowire FETs	K2
CO4	Relate the working of transistors at the molecular scale along with their radiation effects	K2
CO5	Apply the concept of multigate devices to design a circuit	К3

f)	Correlation of COs with POs and PSOs													
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

C05	Н	Н	М	L	Н	Н	L	М	L	М	М	М	М	-

g) Course Content

UNIT I INTRODUCTION TO NOVEL MOSFETS

Fundamentals of Novel Transistors- Comparison Normal and Novel Transistor with advantages-Construction of MOSFET- MOSFET scaling, short channel effects-channel engineering source/drain engineering – high k dielectric - copper interconnects - strain engineering, SOI MOSFET– Types of Gates in SOI MOSFETs.

UNIT II PHYSICS OF MULTIGATE MOS SYSTEM

MOS Electrostatics – 1D - 2D MOS Electrostatics, MOSFET Current-Voltage Characteristics – CMOS Technology – Ultimate limits, double gate MOS system – gate voltage effect – semiconductor thickness effect – asymmetry effect – oxide thickness effect – electron tunnel current.

UNIT III NANOWIRE FETs

Nanowires and their classification-Silicon nanowire MOSFETs – Evaluation of I-V characteristics – The I-V characteristics for non-degenerate carrier statistics – The I-V characteristics for degenerate carrier statistics – Properties of Carbon nanotubes – Carbon nanotube FETs.

UNIT IV TRANSISTORS AT THE MOLCULAR SCALE AND RADIATION EFFECTS 9

Electronic conduction in molecules – General model for ballistic nano-transistors – MOSFETs with 0D, 1D, and 2D channels – Molecular transistors -Radiation effects in SOI MOSFETs, total ionizing dose effects – single gate SOI – multigate devices.

9

9

UNIT V CIRCUIT DESIGN USING MULTIGATE DEVICES

Digital circuits – impact of device performance on digital circuits – leakage performance - trade off – SRAM design, Analog circuit design – transconductance – intrinsic gain – flicker noise – self heating – band gap voltage reference -comparator designs.

g) Course Content

UNIT I FUNDAMENTALS OF OPTOELECTRONICS

Nature of Light, Wave Nature of Light: Polarization – Interference - Diffraction, Light Sources: Blackbody Radiation, Units of Light, Generation of Photo electronics, Elements of Solid State Physics - Quantum Mechanical Concept, Energy Bands in Solids, Semiconductors and Semiconductor Junction Devices.

UNIT II DISPLAY DEVICES AND LASER

Luminescence, Photoluminescence Cathode luminescence, Cathode Ray Tube, Electro Luminescence, Injection Luminescence, LED: Materials - Commercial LED Materials - Construction - Drive circuitry, Plasma Display, Liquid Crystal Displays, Thermal Sensing and FAX printing-Emission and Absorption of Radiation, Population Inversion, Laser losses, LaserModes: Mode Locking- Active Mode Locking - Passive Mode Locking, Laser Applications

UNIT III PHOTO DETECTORS

Thermal Detectors - Thermoelectric Detectors - Bolometer – Pyro electric Detectors- Organic detectors, Photon Devices - Photo Emissive Devices - Vacuum Photodiodes - Photo Multipliers-Nanomaterial detector- Photon Counting Techniques - Photo Conductive Detectors, Detector Performance Parameters.

UNIT IV MODULATION AND SWITCHING DEVICES

Analog and Digital Modulation, Franz- Keldysh and Stark Effect Modulators, Quantum well Electro- Absorption Modulators, Electro-Optic Modulators- Birefringence and Electro- Optic Effect - Kerr Modulators - Magneto Optic Modulators, Optical switching, and logic devices.

9

9

9

UNIT V PHOTONICS & OPTOELECTRONIC INTEGRATED CIRCUITS

Hybrid and Monolithic Integration, Applications of Optoelectronic Integrated Circuits, Materials and Processing for OEICs, Integrated Transmitters and Receivers- Front End Photo Receiver - PIN HBT Photo Receiver - OEIC Transmitter, Guided Wave Devices. Photonics, Photonic Integrated Circuits, Recent Developments in Photonic Integrated Circuits.

UNITI ELECTRONIC INSTRUMENTS

Classification of instruments, Electronic voltmeter and their advantages – types, digital IC tester, source follower, rectifier – True RMS reading voltmeter – electronic multimeter and ohmmeter, Digital frequency meter, Digital LCR meter, Q-Meter, Digital wattmeter and energy meters, microprocessor based DMM with auto ranging and self-diagnostic features.

UNIT II OSCILLOSCOPE & SIGNAL ANALYZERS

General purpose cathode ray oscilloscope – Dual trace, dual beam and sampling oscilloscopes– analog and digital storage oscilloscope-frequency selective and heterodyne wave analyser – harmonic distortion analyser – spectrum analyser.

UNIT III WAVEFORM GENERATORS

Wien's bridge and phase shift oscillators – Hartley and crystal oscillators – square wave and pulse generators – triangular wave-shape generator - signal and function generators, square, triangular sinusoidal waveform generator– Q meter, electronic counters.

UNIT IV MEASUREMENTS AND CALIBRATION

Introduction, significance of measurement, measurement characteristics, measurement of quality factor (Q), Calibration of instruments, Static & dynamic characteristics. Current, Power and Energy Measurement, Time measurement, Frequency measurement, phase angle measurement, Humidity and moisture measurement.

9

9

9

UNIT V COMMON INSTRUMENTATION INTERFACES

Modern instrumentation and control systems – OSI model – EIA 232 interface standard -EIA 485 interface standard - EIA 422 interface standard –20 mA current loop – serial interface converters.

g) Course Content

UNIT I INTRODUCTION

Introduction, Photonics, Nano photonics, Frontier in Nanotechnology, Impact of Nano photonics, Trends in Nano photonics, Opportunities for Basic Research and Development of New Technologies, scope of nano photonics, electron tunneling, photon tunneling.

UNIT II NANO PHOTONICS FOUNDATION

Photons and Electrons, Similarities and Differences - Free-Space Propagation - Confinement of Photons and Electrons. Nanoscale Optical Interactions - Axial Nanoscopic Localization - Lateral Nanoscopic Localization. Nanoscale Confinement of Electronic Interactions - Quantum Confinement Effects, Nanoscopic Interaction Dynamics, New Cooperative Transitions, Nanoscale Electronic Energy Transfer, Cooperative Emission.

UNIT III NANO LITHOGRAPHY

Introduction, Lithography, Two Photon Lithography, Near Field Lithography, Near Field Phase Mask, Soft Lithography, Plasmon Printing, Nanosphere Lithography, Dip-Pen Nanolithography, Nano imprint Lithography, Photonically Aligned Nano arrays.

UNIT IV NANO PHOTONICS FOR BIOTECHNOLOGY

Near-Field Bioimaging, Nanoparticles for Optical Diagnostics and Targeted Therapy, Semiconductor Quantum Dots for Bioimaging, Biosensing - Photonic Crystal Biosensors, Optical Nanofiber Sensors. Nanoclinics for Optical Diagnostics and Targeted Therapy.

9

9

UNIT V NANO PHOTONICS AND ITS APPLICATIONS

Nanotechnology, Lasers and Photonics: Nanotechnology – Photonics – Nano photonics, Optical Nanomaterials: Nanoparticle Coatings - Sunscreen Nanoparticles - Self-Cleaning Glass - Fluorescent Quantum Dots – Nanobarcodes - Photonic Crystals - Photonic Crystal Fibers, Quantum-Confined Lasers, Near-Field Microscopy, Nanolithography, Photonics in Future: Power Generation and Conversion - Information Technology - Sensor Technology – Nanomedicine

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I Introduction to lasers

Introduction to general lasers and their types, Schrodinger wave equation, Atomic systems, emission and absorption processes, Population inversion, gain, optical cavities, three- and four-level lasers, CW and pulsed lasers, Q-switching and mode-locking techniques.

UNIT II Laser systems

Atomic, ionic, molecular, excimer and liquid laser systems- Review of Electromagnetic properties - Basic principle of laser action, Fabrication of lasers - Modulation of lasers - Quantum Well and Quantum Dot Lasers - Passive mode locking Lasers.

UNIT III Fiber lasers

Basic concepts - cavity design – continuous wave (CW) lasers – ytterbium doped fiber lasers – erbium doped fiber lasers - passive mode-locking - saturable absorber - nonlinear fiber loop mirror- graphene based saturable absorber - nonlinear polarization rotation - role of fiber nonlinearity and dispersion - saturable absorber mode-locking

UNIT IV Numerical modeling of fiber lasers

Modeling of passively mode-locked fiber lasers – lumped and distributed modeling - scalar and vector modeling - nonlinear dynamics inside the laser cavity – multi wavelength fiber laser modeling – numerical methods – split step Fourier method – variational analysis – finite difference and finite element beam propagation methods – Runge kutta method.

9

9

9

UNIT V Applications

Laser cooling; Laser barcode scanner, Laser trimming, Cutting, Welding, Drilling and Tracking, Pattern formation by laser etching; LIDAR; Laser-tissue interaction, Laser surgery; Holography, Interferometry, Microscopy.

Course Code	Course Title	L	Т	Р	С
10212EC137	SENSORS AND TRANSDUCERS	3	0	0	3

Program Elective

b) Preamble

The purpose of this course is to provide the analysis of various sensors and transducers by giving them in-depth knowledge about static, dynamic characteristics and error analysis methods.

c) Prerequisite

Basic Electrical and Instrumentation Engineering

d) Related Courses

Electronic Instrumentation

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Summarize various calibration techniques and signal types for sensors	К2
CO2	Explain the construction, working principle, characteristicsand applications of various resistance transducers	K2
CO3	Interpret the working principle of various inductance and capacitance transducers	K2
CO4	Illustrate the basic principles of various smart sensors.	K2
CO5	Discuss the operation and applications of modern industrial transducers	K2

CO5	М	L	Н	М	М	L	-	L	М	М	М	М	М	L

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I INTRODUCTION TO MEASUREMENTS SYSTEMS

Generalized measurement system - Static calibration – Limiting error and probable error-Classification of errors – Error analysis – Statistical methods – Odds and uncertainty – Static characteristics – Accuracy, precision, resolution, threshold, sensitivity, linearity, repeatability, reproducibility, loading effect, drift, static error, span and range, hysteresis, dead time and dead zone, Dynamic characteristics

UNIT II RESISTANCE TRANSDUCERS

Classification of transducers – Selection of transducers, potentiometer: Principle of operation, construction details, Strain gauge – types, Load and torque measurement, Resistance temperature detector (RTD)- Thermistor –Hot-wire anemometer– constant current and constant temperature operation - Resistive humidity sensor

UNIT III INDUCTANCE AND CAPACITANCE TRANSDUCERS

Induction potentiometer – Variable reluctance transducer – Eddy current transducer –Principle of operation, construction details, characteristics and applications of Linear Variable Differential Transducers, proximity sensors, tacho-generators –Capacitive transducer and types - Differential arrangement – Variation of dielectric constant for measurement of liquid level - Dynamic microphone.

UNIT IV OPTICAL & ELECTRICAL SENSORS

Photo conductive cell, photo voltaic, Photo resistive, LDR – Pressure – Diaphragm, Bellows, Tactile sensors, Acoustic Sensors, Radiation Sensors - Smart Sensors - Film sensor, Motion Sensors – Accelerometer, Range Sensors – Ultrasonic Ranging, Laser Range Sensor (LIDAR). Nano sensors, semiconductor sensor.

9

9
UNIT V MISCELLANEOUS TRANSDUCERS

Piezoelectric transducer – Hall Effect transducer – Magneto resistor - Digital displacement Transducer– Fiber optic sensor - Introduction to SQUID sensor, Touch screen sensor, Smart Transducer, MEMS and Introduction to linearization of transducer.

Course Code	Course Title	L	Т	Р	С
10212EC216	FPGA ARCHITECTURE TECHNOLOGIES AND TOOLS	2	0	2	3

Program Elective

b) Preamble

This course discusses the features, programming and applications of Programmable Logic Devices. The students shall emphasize the VLSI architectures such as Altera series Max 5000/7000 series, cypress flash, Virtex- II, Flex architectures, case study. It provides VLSI system design experience using FSM. This course introduce the VHDL models, process, concurrent and sequential statements, loops, delay models, library packages, functions, procedures, test bench and Digital Front End Digital Design Tools

c) Prerequisite

Nil

d) Related Courses

Reconfigurable Computing With FPGA

e) Course Outcomes

Upon the successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Interpret the features of programmable logic devices, CPLD, performance and its applications.	K2
CO2	Summarize the various FPGA architectures, programmable interconnects and one hot encoding.	К2
CO3	Illustrate the syntax and behavior of the VHDL language	К2
CO4	Construct the combinational circuit using VLSI system design	K3
CO5	Model the sequential circuits using VLSI system design	К3

g) Course Content

UNIT I PROGRAMMABLE LOGIC DEVICE

Introduction to features of ROM, PLD, PLA, PAL, GAL, CPLD-Altera series – Max 5000/7000 series - Cypres FLASH 370 Device Technology, Lattice LSI's Architectures – 3000 Series–Applications of CPLDs.

UNIT II FIELD PROGRAMMABLE GATE ARRAYS

FPGAs- Logic blocks, Routing architecture, programmable interconnect, Mapping for FPGAs, Xilinx FPGA Architecture: Xilinx XC3000, XC4000 – Altera Architecture: FLEX 8000, Case studies: Xilinx Virtex II Pro.

UNIT III VHDL FOR SYNTHESIS

Introduction, data flow, behavioral, structural models, operators, process, concurrent statements, Sequential Statements, Loops, Modeling Delays, Sequential Circuits, Library, Packages, Functions, Procedures, Test bench.

UNIT IV COMBINATIONAL CIRCUIT USING DESIGN TOOLS

Digital Front End Design Tools for FPGAs & ASICs: Guidelines and Case Studies of inverters, parallel adder, multiplexers, comparator, CMOS design using Cadence Tool.

UNIT V FINITE STATE MACHINES

Top down Approach to Design, State diagram, State Transition Table, State assignments for FPGAs, Case study Mealy & Moore Machines, FSM issues-Starring state, Power on Reset, State diagram optimization, Fault Tolerance.

COURSE CODE	COURSE TITLE	L	Т	Р	С
10212EC217	ELECTRONICS CIRCUIT SIMULATION AND PCB DESIGN	1	0	4	3

Program Elective

b) Preamble

The course is aimed at making the students to understand electronic circuit simulation process for better understanding and designing of cost-effective Printed Circuit Boards. Emphasizing the students to understand how to design a PCB layout of given circuit using available circuit simulation and PCB layout design CAD tools (free or licensed). This course helps the student to simulate the circuit, develop the complete hardware circuit on PCB and assemble the components using SMD soldering technique

c) Prerequisite Courses

Nil

d) Related Courses

Analog Electronics, Linear Integrated Circuits

e) Course Outcomes

Upon the successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Skill Level (Based on Dave's Taxonomy)
CO1	Demonstrate and simulate and perform various analysis for the given electronic circuit.	\$3
CO2	Perform a PCB layout for the given circuit	S3
CO3	Fabricate the PCB and assemble the components.	\$3

f) Correlation of COs with POs and PSOs

CO3	L	М	Н	Μ	Н	-	-	-	М	-	-	М	L	L

g) Course Content

Theory

15 Hours

Electronics Circuit Simulation

State the features of different circuit simulation tools (Open source or licensed) used for electronic circuit simulation. Different PCB layout design tools (Open source or License) used for PCB layout design. General terms and elements used in circuit simulation software. Assemble electronics circuit using circuit simulation software. Types of Circuit Analysis-Transient Analysis, Bias Point Analysis, Frequency Response.

PCB Layout Design

Terms used: net list file, back annotation, bill of material, foot print, PTH, track width, mil, etc. used in PCB layout design software. Place, route and generate the layout of given circuit using manual or auto routing using PCB layout design software. Raw Materials - Types of PCBs: Single layer - Double layer - Multi layer – Rigid – Flexible - Flex Rigid - High frequency - Aluminium_Backed - Track Width Calculation - Layout Design - Back Annotation -Gerber File - NC Drill File - Fab and Assembly Drawings – Legend - Bill of Material. Packaging Trends - Package Classifications - Package Type and Characteristics: Through-Hole Mounting - Surface Mounting - Special Packages- Package Symbols and Codes. Symbols-Reference Designators- Values and Attributes-Schematic Design Guidelines-Routing - Nodes – Joints - Design Error Check.

PCB Manufacturing and Assembly

Design to Manufacturing - CAM Editor - Reverse Engineering of PCBs - From File to Film -Printing the Inner layers - Removing the Unwanted Copper - Layer Alignment and Optical Inspection - Layer-up and Bond – Drill Plating- Copper Deposition - Outer Layer Imaging Plating- Final Etching - Solder Mask Application - Surface Finish – Silkscreen- Electrical Test - Profiling and V-Scoring - Soldering: Soldering Tools- Assembly and Support Equipment.

S.No.	COs	Practical Exercises 60
1.	CO1	Getting acquainted with simulation tool
2.	CO1	Design a Variable Power Supply Circuit using LM338/LM317
3.	CO1	Design a Hartley Oscillators Circuit and simulate its response.
4.	CO1	Design an AstableMultivibrator Circuit and simulate its response.
5.	CO1	Design and simulate response of Active and Passive Filter Circuits.
6.	CO2	Getting acquainted with PCB layout tool

h) List of Experiments

7.	CO2	Design a PCB layout for the given circuit (Basic Level)
8.	CO2	Design a PCB layout for the given circuit (Advanced Level)
9.	CO2	Board to Layout Design (Reverse Engineering)-FM Board.
10.	CO3	Hands on Experience-Soldering and types of Soldering
11.	CO3	THT components- Drilling and Soldering.
12.	CO3	Complete Board Assembly-FM Board

UNIT I DIGITAL CRIMES

Introduction to Digital Forensics, Definition and types of cybercrimes, electronic evidence and handling, electronic media, collection, searching and storage of electronic media, introduction to internet crimes, hacking and cracking, credit card and ATM frauds, web technology.

UNIT II COMPUTER FORENSICS

Definition and Cardinal Rules, Data Acquisition and Authentication Process, Windows Systems-FAT12, FAT16, FAT32 and NTFS, UNIX file Systems, mac file systems, computer artifacts, Internet Artifacts, OS Artifacts and their forensic applications.

UNIT III DIGITAL INVESTIGATIONS

Understanding Computing Investigations – Procedure for corporate High-Tech investigations, understanding data recovery work station and software, conducting and investigations.

UNIT IV PROCESSING OF ELECTRONIC EVIDENCE

Processing of digital evidence, digital images, damaged SIM and data recovery, multimedia evidence, retrieving deleted data: desktops, laptops and mobiles, retrieving data from slack space, renamed file, ghosting and compressed files.

9

9

9

UNIT V FORENSIC TOOLS

Data acquisition- understanding storage formats and digital evidence, determining the best acquisition method, acquisition tools, validating data acquisitions, performing RAID data acquisitions, remote network acquisition tools, other forensics acquisitions tools.

Course Code	Course Title	L	Т	Р	С
10212EC151	CRYPTOGRAPHY FOR CYBER AND NETWORK SECURITY	3	0	0	3

Program Elective

b) Preamble

This course will provide students with an understanding on the concepts and protocols of cryptography for cyber security.

c) Prerequisite

Data Communication Networks

d) Related Courses

Network Security, Cyber Security for smart wearables, Automotive Cyber Security

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Outline the basic concepts of cryptography, security issues and its need	K2
CO2	Explain the various symmetric and asymmetric algorithms used for cyber security.	K2
CO3	Summarize various message and entity authentication protocols.	K2
CO4	Illustrate the basic concepts of system security models.	K2
CO5	Infer the network security architecture and layer security issues related to 3G and 4G networks.	K2

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I INTRODUCTION TO CRYPTOGRAPHY

Basic Cryptography Concepts: Symmetric Encryption Algorithms, Purpose of Cryptography. Security issues: Security problems in computing - attacks - security services - Security mechanism - OSI security architecture - standard setting organizations- Need for Cryptographic techniques- Substitution - Transposition.

UNIT II SYMMETRIC AND ASYMMETRIC ENCRYPTION

Block ciphers: DES - Triple DES with two keys – AES, Stream cipher: RC4 – Blow Fish. Public Key Algorithm: RSA algorithm – Elliptic Curve Cryptography.

UNIT III MESSAGE AND ENTITY AUTHENTICATION 9

Message Authentication: Message Authentication Code (MAC), MD5, HASH algorithm-SHA 512 logic – Kerberos – PKI trust model. Entity Authentication: Digital signatures standards – Applications – Diffie Hellman key exchange - Elliptical curve digital signature algorithm.

UNIT IV SYSTEM SECURITY

Intruders and intrusion detection: Malicious software - viruses and related threats - virus counter measures - firewalls design principles- trusted systems. Android - based Smartphone Security, Stepping Stone Detection, Broken Authentication and Session Management Vulnerabilities, Computer Forensic Investigation, Cyber Terrorism.

UNIT V NETWORK SECURITY

Network Security: IP security overview - IP security architecture - authentication headerencapsulating security payload - combining security association - web security considerations - secure socket layer and transport layer security - secure electronic transaction - security in GSM - security in 3G and 4G.

g) Course Content

UNIT I FUNDAMENTALS OF BLOCKCHAIN

Evolution of Blockchain- Public Ledgers, Blockchain as Public Ledgers -Bitcoin, Blockchain 2.0, Smart Contracts, Block in a Blockchain, Transactions-Distributed Consensus, The Chain and the Longest Chain -Cryptocurrency to Blockchain 2.0 -Permissioned Model of Blockchain, Cryptographic -Hash Function, Properties of a hashfunction-Hash pointer and Merkle tree.

UNIT II BITCOIN AND CRYPTOCURRENCY

A basic crypto currency, Creation of coins, Payments and double spending, FORTH – the precursor for Bitcoin scripting, Bitcoin Scripts, Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay, Consensus introduction, Distributed consensus in open environments-Consensus in a Bitcoin network.

UNIT III BITCOIN CONSENSUS

Bitcoin Consensus, Proof of Work (PoW)- Hashcash PoW, Bitcoin PoW, Attacks on PoW ,monopoly problem- Proof of Stake- Proof of Burn - Proof of Elapsed Time - Bitcoin Miner, Mining Difficulty, Mining Pool-Permissioned model and use cases, Design issues for Permissioned Blockchains, Execute contracts-Consensus models for permissioned blockchain-Distributed consensus in closed environment Paxos.

UNIT IV DISTRIBUTED CONSENSUS

RAFT Consensus-Byzantine general problem, Byzantine fault tolerant system-Agreement Protocol, Lamport-Shostak-Pease BFT Algorithm-BFT over Asynchronous systems, Practical Byzantine Fault Tolerance.

9

9

UNIT V PLATFORMS AND APPLICATIONS

Introduction to Blockchain platforms: Hyberledger-Ethereum-IOTA-EOS-Multichain- Bigchain, CORDA, Openchain, SOLIDITY, Smart contracts, Truffle Design and issues in cryptocurrency ,Mining, Distributed Applications (DApps), DAO Applications: Internet of Things-Medical Record Management System-Government Identity management –Auto executing contracts-Three signature esrow-Tripple entry accounting-Sidechain-Challenges and Research issues in blockchain.

Course Code	Course Title	L	Т	Р	С
10212EC153	AUTOMOTIVE CYBER SECURITY	3	0	0	3

Program Elective

b) Preamble

The goal of the course is to introduce students to the potential threats of cyber-attacks on vehicles, especially connected and automated vehicles. The basics of cyber security threat models, high risk attack areas of vehicles, classes of attacks, and protecting vehicles from attacks are introduced. Standards and protocols related to automotive cyber security will be covered. Attacking connected vehicles will be discussed by reviewing in-vehicle network, vehicle-to-vehicle (V2V) and vehicle-to-infrastructure (V2I) communications and wireless access protocols. Potential attacks on vehicles are also described.

c) Prerequisite

Principles of Networking & Cyber security

d) Related Courses

Cyber security for smart wearable

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain appropriate instances for the application of computer forensics.	K2
CO2	Outline the inner workings of file systems.	K2
CO3	Summarize the concept of digital investigation and digital evidence.	K2
CO4	Interpret about Internet of vehicles and using machine learning to secure them	K2
CO5	Discuss the regulations, current challenges and future trends in automobiles	K2

g) Course Content

UNIT I FUNDAMENTALS OF AUTOMOTIVE CYBER SECURITY 9

Evolution of Automotive Systems- Cyber Security in Automotive Technology- State of the Art Vehicle Technologies: Autonomous Vehicle-Connected Vehicle Technology - Market Demand of Automotive Cyber Security.

UNIT II IN-VEHICLE COMMUNICATION AND CYBER-SECURITY 9

In-Vehicle System: Vehicle Electronics/Electrical Systems- In-Vehicle Communication (IVC) - In-Vehicle Network Architecture and Topology- Functional Safety and Cybersecurity- In-Vehicle Cyber security Issues and Challenges-Cyber Security in In-Vehicle Network.

UNIT III INTER-VEHICLE COMMUNICATION AND CYBER-SECURITY 9

Connected Vehicles- VANET Technologies - Role of Edge Computing and SDN in V2X-Connected Vehicle Cyber Security- Connected Vehicle Cyber Security- Homomorphic Encryption in VANET- Blockchain in V2X Communication- Blockchain in V2X Communication.

UNIT IV INTERNET OF VEHICLES & MACHINE LEARNING

Internet of Vehicles (IoV): IoV Layered Architecture - Security in IoV- IoV Security Requirements and Attacks - Challenges in IoV- Machine Learning in Vehicular Networks: Types of Machine Learning Techniques-Type of ML in Vehicular Networks -Cybersecurity Solutions Based on ML-Attacks on Machine Learning/Deep Learning models -Application of Machine Learning in Vehicular Networks.

UNIT V V2X- STANDARDS AND CURRENT ISSUES

Standards, Regulations, and Legal Issues- Competition Over V2X Technology Adoption - V2X Use Cases - Current Trends and Future of Intelligent and Autonomous Vehicles.

UNIT I INTRODUCTION TO WEARABLE DEVICES

Purpose, Scope and Technical consideration of wearable consideration of wearable technologies – The promise and perils of wearable technologies – Wearable computers.

UNIT II SECURITY ISSUES IN WEARABLE DEVICES

Risks of wearable technology to individual and organization – Authenticity challenges of wearable technologies – Privacy dangers of wearables and the internet of things.

UNIT III MANAGEMENT OF SECURITY ISSUES IN WEARABLE

Ethical challenges and solution – Confidential data storage systems for wearable platform – Security, Privacy and ownership issues with the use of wearable health technologies.

UNIT IV APPLICATIONS

Optical Fiber technology for e healthcare – Innovative service and application in health care monitoring system – Smart textile as a creative environment to engage girls in technology – Health and Fitness wearables.

UNIT V CASE STUDIES

Study of real time cardio monitoring system: A comprehensive study – Signal adaptive analog to digital convertors for ULP wearable and Implantable medical devices – Securing the human cloud: Applying biometrics to wearable technology – A survey of recent trends in wireless communication standards, routing protocols and energy harvesting techniques in E – Health Applications.

Program Elective

b) Preamble

Knowing how to install, configure, and troubleshoot a computer network is a highly marketable and exciting skill. This course first introduces the fundamental building blocks that form a modern network, such as protocols, topologies and hardware. It provides in-depth coverage of the most important concepts in contemporary networking, such as TCP/IP, Ethernet, wireless transmission, and security. Cyber Attacks and Prevention methods are also covered in fundamentals perspective. This course will prepare the students to design a network using hardware and software for specific environment. They will also have the knowledge to build them seconds.

c) Prerequisite

Nil

d) Related Courses

Cryptography for Cyber and Network Security, Cyber Security for Smart Wearables.

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Outline the concepts of networking in wired and wireless networks	K2
CO2	Utilize the different troubleshooting a network using network utilities	K2
CO3	Illustrate the various information security and security threats in cyber security	K2
CO4	Infer various algorithms used to prevent cyber attacks	K2
CO5	Summarize the various cyber-attacks and their impacts	K2

UNIT I NETWORK DESIGN & IMPLEMENTATION

Review of Network Basics: Network Design: Topologies- Network Plan- IP Addressing & Subnetting-IPv6- DCHP-DNS-Design: Access Network-LAN-WAN. Network Implementation: Packet Tracer-Performance Analysis: Unicast-Multicast-Broadcast.

UNIT II NETWORK MANAGEMENT & TROUBLESHOOTING

Network Management: Network Monitoring: Performance monitoring-Fault monitoring-Account monitoring- Configuration and security management. Network Troubleshooting: Command Line Utilities: ipconfig, Ping, Tracert, nslookup-Network Analyser Tools: Wireshark- ipMonitor.

UNIT III INFORMATION SECURITY AND SECURITY THREATS 6

Cyber security Introduction and Overview-Threats to information system-Cyber security and security risk analysis-Information Assurance-Types of Computer Malware -Types of Cyber Attacks: Denial of Service, Distributed Denial of Service, Man in Middle Attack, Crypto-jacking, SQL Injection, Cyber-Stalking Cyber frauds and Forgery

UNIT IV CYBER ATTACK PREVENTION

Algorithms and Technique-Firewalls-Intrusion Detection & Prevention-Authentication using Hash-Multi-Factor Authentication- Secure Socket Layer- Virtual Private Network.

UNIT V RECENT ATTACKS AND IMPACTS

Equifax data theft – VPN filter cyber attack-Wannacry Ransom attack-Peta Cyber attack-US 2016 election manipulation-US power grid hacking-Shadow network attack-Github DDoS attack 2018

g) Course Content

UNIT I ETHICAL HACKING OVERVIEW, NETWORK & COMPUTER ATTACKS

Introduction to Ethical hacking-What you can do legally-What you cannot do legally-Various Attacks: Malware and its Protection-Intruder Attacks-Addressing Physical security.

UNIT II FOOT PRINTING AND RECONNAISSANCE

Using Web tools for foot printing-Conducting competitive intelligence-Using Domain Name system zone transfers-Introduction to Port Scanning-Using port scanning tools-Conducting Ping Sweeps- Understanding Scripting.

UNIT III ENUMERATION AND VULNERABILITY ANALYSIS

Enumeration concepts-NetBIOS Enumeration-SNMP Enumeration-SMTP-DNS Enumeration- Enumeration Countermeasures-Penetration Testing: Foot printing-port scanning-Enumeration.

UNIT IV HACKING WEB SERVERS AND WIRELESS NETWORKS

Understanding Web applications and Vulnerabilities-Tools for Web attackers and Security testers- Wireless Technology- Wireless Network Standards-Authentication-Wardriving- Wireless Hacking.

UNIT V NETWORK PROTECTION SYSTEMS

Routers: Routing Protocols-Basic Hardware routers-Access Control Lists -Firewalls: Technology- Implementation-Configuration and Risk Analysis tools-Intrusion Detection and Prevention Systems: Network based and Host based IDS and IPS-Honeypots

UNIT I INTRODUCTION TO AI

AI problems, Agents and Environments, Structure of Agents, Problem Solving Agents Basic Search Strategies: Problem Spaces, Uninformed Search (Breadth-First, Depth-First Search, Depth-first with Iterative Deepening), Heuristic Search (Hill Climbing, Generic Best-First, A*), Constraint Satisfaction (Backtracking, Local Search)

L

L

L

L

L

L

Advanced Search: Constructing Search Trees, Stochastic Search, A* Search Implementation, Minimax Search, Alpha-Beta Pruning+

AI FOR CYBER SECURITY UNIT II

Evolution in AI: from expert systems to data mining AI problems, Types of machine learning, Algorithm training and optimization, Python's libraries for machine learning, AI in the context of cybersecurity, Python libraries for cybersecurity: Pefile, Volatility

UNIT III DETECTING CYBERSECURITY THREATS

Detecting Cyber security Threats with AI- Phishing detection with logistic regression and decision trees- Spam detection with SVMs - Spam detection with Naive Bayes- A Bayesian spam detector with NLT.

UNIT IV MALWARE THREAT DETECTION

Malware analysis at a glance- Artificial intelligence for malware detection- Malware goes by many names- Malware analysis tools of the trade- Malware detection strategies- Static malware analysis- Static analysis methodology- Difficulties of static malware analysis -Dynamic malware analysis-Extracting malware artifacts in a dataset - Clustering malware with K-Means - Random Forest Malware Classifier.

g) Course Content

MATHEMATICS FOR DATA SCIENCE UNIT I

Definition of Vector spaces, Subspaces, sums of Subspaces, Direct Sums, Eigenvalues and Eigenvectors - Eigenvectors and Upper Triangular matrices - Eigenspaces and Diagonal Matrices, Distance measures - Euclidean Distance, Manhattan Distance, Hamming Distance, Cosine Similarity.

UNIT II DATA SCIENCE PROCESS

Fundamentals of Data Science, Data Preparation: The Problem Understanding Phase, Data Preparation Phase, Adding an Index Field, Changing Misleading Field Values, Reexpression of Categorical Data as Numeric, Standardizing the Numeric Fields, Identifying Outliers.

UNIT III DATA VISUALIZATION

Introduction to data visualization, visualization techniques: scatter plots, line graphs, pie charts, bar charts, heat maps, area charts and histograms, case study: Survey on Covid-19 dataset.

UNIT IV DATA MODELING AND EVALUATION

Data Modeling: Partitioning the Data, validating your Partition, Balancing the Training Data Set, Establishing Baseline Model Performance, Model Evaluation: Classification Evaluation Measures, Sensitivity and Specificity, Precision, Recall, and F_B Scores, Method for Model Evaluation.

UNIT V ETHICS IN DATA SCIENCE

Importance of ethics in data science, doing good data science, data privacy - degrees of privacy, valuing different aspects of privacy, modern privacy risks, Getting informed consent, The Five Cs - consent, clarity, consistency and trust, control and transparency, consequences, Diversity, Inclusion, future trends.

Course Content g)

INTRODUCTION TO DATA ANALYSIS UNIT 1

Data Analysis Process – Data Types: Non-dependency & Dependency Oriented Data - Major Building Blocks- Scalability Issues - Data Type Portability - Data Cleaning - Data Reduction and Transformations.

ASSOCIATION AND CLUSTER ANALYSIS UNIT 2

Association Analysis: The Frequent Pattern Mining Model - Association Rule Generation Framework - Frequent Itemset Mining Algorithms: Brute Force Algorithm, Apriori Algorithm -Statistical Coefficients: Correlation, γ^2 Measure, Interest Ratio.

Cluster Analysis : Feature Selection for Clustering - Hierarchical Clustering Algorithms -Grid-Based Algorithms - DBSCAN Algorithm - Cluster Validation.

UNIT 3 TIME SERIES ANALYSIS

Introduction- Time Series Preparation and Similarity- Time Series Forecasting- Time Series Motifs - Time Series Clustering: Shape-Based Clustering, Time Series Outlier Detection- Time Series Classification -Similarity Measures.

UNIT 4 **VISUALIZATION: ABSTRACTIONS & PRINCIPLES**

Levels of Design- Threats and Validation- Data Abstractions: Types, Semantics- Attributes & Datasets. Visual Encoding: Marks and Channels, Channel Effectiveness & Characteristics. Interaction: Classes of Change, Latency & Feedback- Slogans & Guidelines: No Unjustified 3D

UNIT 5 **DATA VISUALIZING METHODS & TOOLS**

Making Views: Using Space- Value Attributes- Coordinating Views- Superimposing Layers, Reducting Items: Filtering-Aggregation-Navigation-Real Time Data Visualization Tools.

C05	М	М	М	L	L	-	-	-	L	L	-	-	L	М

g) Course Content:

UNIT I: ARTIFICIAL NEURAL NETWORKS

Biological neurons - Model of an artificial neuron- neural network architecture- characteristics of neural network- learning methods, Rosenblatt's perceptron, Adaline network, Madaline network-Back Propagation Networks (BPN)- Back Propagation learning, applications, effects of tuning and selection of various parameters in BPN.

UNIT II: FUZZY SYSTEMS

Introduction to Fuzzy Logic, Classical Sets and Fuzzy Sets – Classical Relations and Fuzzy Relations -Membership Functions -Defuzzification – Fuzzy Arithmetic and Fuzzy Measures - Fuzzy Rule Base and Approximate Reasoning – Fuzzy Decision Making, Mamdani Fuzzy Models – Sugeno Fuzzy Models – Tsukamoto Fuzzy Models.

UNIT III: GENETIC ALGORITHMS

Basic Concepts- Working Principles -Encoding- Fitness Function – Reproduction – Genetic modeling: Inheritance Operators – Cross Over – Inversion and Deletion -Mutation Operator – Bitwise Operators - Convergence of Genetic Algorithm - Multi-level optimization- Optimization algorithms: Ant colony optimization, Particle swarm optimization.

UNIT IV: HYBRID SYSTEMS

Hybrid algorithms: Neuro fuzzy hybrids, neuro genetic hybrids, fuzzy genetic hybrids, GA Based Weight Determination – LR-Type Fuzzy Numbers – Fuzzy Neuron – Fuzzy BP Architecture – Learning in Fuzzy BP- Applications: Knowledge Base Evaluation, earthquake Damage Evaluation, Fuzzy Art Map: A Brief Introduction – Soft Computing Tools – GA in Fuzzy Logic Controller Design.

9

9

9

UNIT V: MULTI-OBJECTIVE OPTIMIZATION

Multi-Objective Optimization: Problems, Principles- Classical methods: Weighted Sum method, ϵ -Constraint method- Concept of multi-objective optimization problems (MOOPs) and issues of solving them - Multi-Objective Evolutionary Algorithm (MOEA) - Non-Pareto approaches to solve MOOPs - Pareto-based approaches to solve MOOPs

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I FUNDAMENTALS OF STATISTICAL MODELS, LINEAR MODELS AND REGRESSION

Introduction: Basic concepts from statistics, definition and uses of models, real-time applications, key steps in the modelling process. Linear models and optimization - least square estimation - Revisiting regression models: analysis of variance model, interpretation of regression coefficients, R-squared and root mean squared error, fitting curves to data.

UNIT II PROBABILISTIC MODELS

Introduction to probabilistic models: some examples of probabilistic models, noisy channel model, source-channel model, joint source-channel models, Monte-Carlo Simulations, Building blocks of probability models, Various distributions, mixture models, bootstrap maximum likelihood methods, Bayesian method, expectation maximization.

UNIT III MARKOV MODELS, MARKOV PROCESSES AND TREE BASED MODELS

Markov-chain models, Hidden Markov model, Conditional random fields, tree-based models, decision trees, Latent variable probability models. Factor analysis, principal component analysis, Support vector machines, generalized linear discriminant analysis.

9

9

UNIT IV STATISTICAL MACHINE LEARNING TECHNIQUES

Statistical terminology for model building and validation -Machine Learning, Major differences between statistical modeling and machine learning - Steps in machine learning model development and deployment - Statistical fundamentals and terminology for model building and validation - Bias versus variance trade-off, Train and test data - Linear regression versus gradient descent

UNIT V LOGISTIC REGRESSION AND RANDOM FOREST TECHNIQUES 9

Logistic Regression - Terminology involved in logistic regression - Applying steps in logistic Regression modeling - Applying steps in logistic regression modeling using German credit data Random Forest algorithm, Grid search on random forest - Variable importance plot Comparison of logistic regression with random forest.

g) Course Content

UNIT IINTRODUCTIONTOMACHINEVISION & BINARYIMAGEPROCESSING TECHNIQUES9

Machine Vision - Image definitions - Levels of computation- Binary image processing -Geometric properties, size, position & orientation - Component labeling -Binary Algorithms: Run length encoding - Size filter - Euler number - Region boundary - Area perimeter – compactness - Distance measures - Distance transforms - Medial axis - Morphological operators - Thinning- Expanding and Shrinking

UNIT II SEGMENTATION TECHNIQUES

Segmentation - Automatic thresholding - Limitations of Histogram methods - Region representation - array representation - Hierarchical representation - Region based segmentation: Split and merge - region merging - Removing weak edges - Region splitting - split and merge-Region growing

UNIT III EDGE DETECTION

Gradient - Steps in edge deduction – Robert's operator - Sobel operator - Prewitt operator - Second derivative operator - Laplacian operator - Gaussian edge Detection - Canny edge detector - Image Approximation - Subpixel location estimation - Edge detector performance- methods of Evaluating performance - Figure of merit

UNIT IV GEOMETRICAL OPTICS & DEPTH COMPUTING TECHNIQUES

Optics - Lens equation - Image resolution - Depth of Field -View volume -Exposure- Shading-Image Inductance - Illumination - Reflector - Surface orientation - Shape from shading depth -Stereo imaging - Cameras in arbitrary position and orientation - Stereo matching - Shape from X -Range imaging - Structural lighting - Imaging Radar- Active vision.

9 20

9

UNIT V DYNAMIC VISION & OBJECT RECOGNITION

Change detection - Difference pictures - Static segmentation and matching - object recognition system components - complexity of object recognition - object representation - observer centered & object centered representations - feature detection - recognition strategies - classification - Matching Feature indexing - verification - Template matching - morphological approach - symbolic analogical methods.

g) Course Content

UNIT I INTRODUCTION TO DATA SCIENCE

Data Science: Benefits and uses – facets of data – Data Science Process: Overview – Defining research goals – Retrieving data – Data preparation – Cleansing integrating and transforming data - Exploratory Data analysis – Build the models– Presenting findings and building applications

UNIT II DATA BASES FOR DATA SCIENCE

Structured Query Language (SQL): Basic Statistics - Data Munging – Filtering – Joins – Aggregation - Window Functions - Ordered Data preparing - No-SQL: Document Databases, Wide-column Databases and Graphical Databases.

UNIT III DATA VISUALIZATION

Introduction to data visualization, visualization techniques: scatter plots, line graphs, pie charts, bar charts, heat maps, area charts – visualizing errors – density and contour plots – Histograms – legends – colors – subplots – text and annotation – customization – Three dimensional plotting - Geographic Data with Basemap – Visualization with Seaborn – Case study on Covid-19 dataset.

UNIT IV PLATFORM FOR DATA SCIENCE

Python for Data Science –Python Libraries – Data Frame Manipulation with numpy and pandas – Exploration Data Analysis – Time Series Dataset – Clustering with Python –Dimensionality Reduction - Tableau Introduction – Dimensions, Measures, Descriptive Statistics, Basic Charts, Dashboard Design Principles, Special Chart Types, Integrate Tableau with Google Sheets.

UNIT V ETHICS IN DATA SCIENCE

Importance of ethics in data science, doing good data science, data privacy – degrees of privacy, valuing different aspects of privacy, modern privacy risks, Getting informed consent, The Five Cs – consent, clarity, consistency and trust, control and transparency, consequences, Diversity, Inclusion, future trends.

On successful completion of the course the students will be able to

CO Nos	Course Outcomes	Skill Level (Based on Dave's Taxonomy)
CO1	Perform the process of data cleaning, preparation, wrangling with numpy and pandas for exploratory data analysis	S2
CO2	Simulate the basic data visualizations to interpret data and perform calculations on different data types, tables.	S2
CO3	Build advanced visualizations with tableau and power BI to make complex interprets.	S2

f) Correlation of COs with POs and PSOs

	PO	PO1	PO1	PO1	PSO	PSO								
	1	2	3	4	5	6	7	8	9	0	1	2	1	2
C01	М	Н	Η	М	Η				L	L	L		L	L
CO2	М	Н	Н	М	Н				L	L	L		М	L
CO3	М	М	Н	L	Н				L	L	L		М	L

g) Course Contents: Theory

Data Cleaning, Preparation, wrangling using Python: Filtering and replacing values, outlier detection, Merging, reshaping datasets.

Data visualization in Tableau: charts, maps, plots, case studies, calculations with Tableau. Advanced visualization using Tableau: charts, plots, statistical data modeling- Power BI: Table operations, Budget allocation, DAX in data models.

LIST OF EXPERIMENTS									
Sl. No.	Name of the Experiment	СО							
01	Perform the following operations using Python, connecting to databases.a. Handling missing datab. Filtering out & filling in missing data	CO1							
02.	Perform the following operations using Python connecting to databases.a. Transpose a tableb. Replace data from the tablesc. Renaming axis indices, Detecting outliers, Random sampling.	CO1							
03	Perform the following Data Wrangling operations using Python connecting to databases : Combining and merging datasets, Reshaping and pivoting.	CO1							
04	Perform the following operations using Tableaua. Aggregate calculations, creating parameters.b. Detailed calculations								
05	Perform the following basic visualizations of data, using Tableau connecting to databases: Bar charts, Bullet chart, highlight categories of interest, Date Parts, Gantt charts								
06	 Perform the following basic visualizations of data, using Tableau connecting to databases. a. Relating parts of data to whole- stacked bars b. tree maps, area charts c. visualizing distributions -circle charts 	CO2							
07	 Perform the following Calculations using Tableau a. Row and column level calculations, Aggregate calculations b. Creating parameters c. Detailed calculations: Examples of fixed level of detail calculation 	CO2							
08	Perform the following Calculations using Tableau	CO2							

Course Contents: Practical Exercises

	a. creating and editing table calculations	
	b. addressing and partitioning	
	c. meta table functions	
09	Perform the following visual analytics using Tableau connecting to databases.a. Exporting and explain statistical data,b. Clustering, Distributions.	CO3
10	 Perform the following advanced visualizations of data using Tableau connecting to databases. a. Slope charts and Bump charts b. Step lines and Jump lines, Spark lines, c. Dumbbell charts d. Build Marimekko chart for UCBA admissions dataset 	CO3
11	Perform the following tasks with Power BIa. Sharing the dashboard, Using Power BI desktopb. Getting data from services and content packs	CO3
12	 Perform the following data building tasks with Power BI a. Loading Individual tables, creating calculated columns b. Integrating budget, reallocating budget. c. Using DAX in data models. 	CO3

10212EC226	MACHINE LEARNING	2	0	2	3

Specialization Elective

b) Preamble

This course is proposed to meet a growing professional need of individuals skilled in artificial intelligence, data analytics, statistical programming and other software skills. The course integrates theory and practice to enable the student to gain the necessary knowledge to compete in the ever-changing work environment. This course covers the fundamental concepts of machine learning, core concepts of Bayesian decision theory, Linear regression, Logistic regression, Support Vector Machines, clustering and dimensionality reduction techniques along with hands-on problem solving using simple python programming

c) Prerequisite

Python Programming

d) Related Courses

Deep Learning

e) Course Outcomes

On successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Outline the basic concepts of machine learning and implement using python programming	K2
CO2	Model bayesian decision theory principles, bayes classifier and estimator for classification and prediction	К3
CO3	Apply the various linear and logistic regression models and demonstrate using python	К3
CO4	Identify and apply the classification algorithms and implement using python.	K3
CO5	Make use of the clustering algorithms and dimensionality reduction techniques for developing applications and implement the algorithms using python.	К3

f) Correlation of COs with POs and PSOs

	PO	PSO	PSO											
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	Μ	Μ	L	L	Μ	-	-	-	Μ	L	-	L	-	-

CO3	Η	Η	Μ	Μ	Μ	-	-	-	Μ	L	-	Μ	L	Μ
CO4	Η	Η	Η	Μ	Μ	-	-	-	Μ	L	-	Н	L	Μ
CO5	Н	Н	L	Μ	Μ	-	-	-	М	L	-	L	L	Μ

g) Course Content

UNIT I MACHINE LEARNING BASICS

Definition of learning systems - types of learning; Supervised, Unsupervised and Reinforcement learning - hypothesis space - General-to-specific ordering of hypotheses and inductive bias, evaluation, cross-validation, Find-S, List then eliminate algorithm, Candidate elimination algorithm

UNIT II BAYESIAN DECISION THEORY

Bayes rule – independence and conditional independence – Minimum error rate classification, Normal density and discriminant functions – Bayesian Concept learning - MAP estimation – Bayes Classifier - Maximum Likelihood and Bayesian Parameter Estimation for common loss functions, Naïve Bayes model.

UNIT III LINEAR AND LOGISTIC REGRESSION

Simple linear regression – Multiple linear regression – Least squares estimation – Coefficient of Determination (R-squared) and Adjusted R-Squared, Hypothesis Test for Regression Coefficients (t-Test), Ridge regression - Logistic Regression Model–Multiple logistic regression – Step wise Logistic Regression–Best Subset Logistic Regression

UNIT IV CLASSIFICATION ALGORITHMS

Introduction to Classification - k-Nearest Neighbor Algorithm - Decision Trees: Univariate, Multivariate trees, ID3 algorithm - Random Forests, Support Vector Machines.

UNIT V CLUSTERING AND DIMENSIONALITY REDUCTION

Introduction to clustering - Mixture densities - k-Means Clustering - Hierarchical Agglomerative Clustering - choosing number of clusters, Dimensionality Reduction - Need for Dimensionality Reduction - Subset Selection - Principal Component Analysis

LIST OF EXPERIMENTS

Hardware requirement:

• i5 Processor, 8GB RAM, & Internet Connection

Software Environment:

• IDE recommended PYCHARM (Recommended), JUPYTER

Specialization Elective

b) Preamble

Deep Learning is one of the most attractive and promising areas of AI and machine learning and finds itself vastly applicable in Computer Vision tasks. This course covers the fundamentals from Artificial Neural Network to the current trending topic of Convolution Neural Network and adversarial deep networks. Thus, this course aims to provide basic knowledge on applying deep learning techniques to solve various real-life problems.

c) Prerequisite

Python Programming

d) Related Courses

Machine Learning

e) Course Outcomes

On successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Demonstrate the fundamentals of machine learning and deep learning concepts.	K2
CO2	Apply CNN models and transfer learning for different applications.	K3
CO3	Illustrate the architectural features of diverse deep CNN networks.	К3
CO4	Utilize various RNN network models for sequence and textprocessing applications.	K3
CO5	Employ autoencoders and adversarial network models for image processing applications.	K3

CO5	М	Μ	М	М	Н	-	-	L	L	L	-	М	L	М

g) Course Content

UNIT I FOUNDATIONS OF DEEP LEARNING

Biological neuron – Perceptron – Multilayer feed-forward networks – backpropagation learning – parameters – loss functions – hyperparameters - capacity - estimators - bias and variance - overfitting and underfitting - Stochastic gradient descent - Need for deep learning - Deep Networks: Deep feed-forward networks - Regularization.

UNIT II CONVOLUTIONAL NEURAL NETWORKS

Convolution operation – variants with strides - Activation functions - Building blocks of Convolutional Neural Networks: Convolution Layers, Pooling Layers, Fully Connected Layers - Greedy layer wise training - CNN based deep learning - transfer learning based deep learning - Application of CNN model for character classification on MNIST Dataset.

UNIT III DEEP CONVOLUTION NEURAL NETWORKS

CNN architectures: LeNet, Alexnet, VGG, GoogleNet, Xception, Inception models - Application of transfer learning using Alexnet and Googlenet models for image classification tasks.

UNIT IV RECURRENT NEURAL NETWORKS

Support for sequences in Neural Networks - Recurrent Neural Networks: Basic architecture, variants of RNN models - LSTM architecture - GRU architecture - Application of RNN models for sequence and text processing.

6

6

UNIT V AUTOENCODERS AND ADVERSARIAL NETWORKS

Autoencoder models - Introduction to Generative Adversarial Networks: Generator, Discriminator Adversarial Networks - Application of autoencoder for dimensionality reduction and adversarial model for image processing.

i) List of Experiments

S. No	Name of the experiment	СО
	a) Understanding and working with Keras and Tensorflow	
	b) Design a dense neural network using Tensorflow	~ ~ .

g) Course Content

UNIT I Introduction to Optimization

Optimization Basics, Optimization Techniques, Optimal Problem Formulation, Sequences and Limits, Derivative Matrix, Level Sets and Gradients, Taylor Series, Linear Programming, Formulation of Problem, Graphical Method, Simplex Method, Dual Simplex Method

UNIT II Single-Variable Nonlinear Optimization

Classical Method for Single-Variable Optimization, Exhaustive Search Method, Bounding Phase Method, Interval Halving Method, Fibonacci Search Method, Golden Section Search Method, Bisection Method, Newton Raphson Method, Secant Method, Successive Quadratic Point Estimation Method

UNIT III Multivariable Nonlinear Optimization

Classical Method for Multivariable Optimization, Unconstrained Nonlinear Optimization, Unidirectional Search Method, Evolutionary Search Method, Simplex Search Method, Constrained Nonlinear Optimization, Equality and Inequality Constrained Optimization, Random Search Method, Complex Method, Penalty Function Method, Convex Programming Problem

UNIT IV Optimization Programming

Geometric Programming – Constrained- Unconstrained, Dynamic Programming – Characteristics-Terminologies, Linear and Non-Linear Integer Programming, Multi-Objective Optimization

UNIT V Nature-Inspired Optimization and Applications

Genetic Algorithm, Neural Network-based Optimization, Ant Colony Optimization, Particle Swarm Optimization, Optimization Methods for Deep Learning and Machine Learning

g) Course Content

UNIT I DATA SCIENCE FUNDAMENTALS

Need for Data Science – Exploring Data Engineering Pipelines and Infrastructure – Data Science Process Overview –Defining goals – Retrieving data – Data preparation – Data exploration – Data modeling.

UNIT II KNOWLEDGE EXTRACTION FROM DATA

Learning from Data with Machine - Math, Probability, and Statistical Modeling – Using Clustering to Subdivide Data - Modeling with Instances – Model Building.

UNIT III TOOLS FOR DATA SCIENCE

Python for Data science – Rows and Columns, Creating Data frames, Exploring Data frames, Accessing Columns in a Data frame - Excel, Knime, Data Munging: Reading a CSV Text File, Removing Rows and Columns, Renaming Rows and Columns, Cleaning up the Elements, Sorting data frames.

UNIT IV DATA VISUALIZATION

Principles of Data Visualization Design - D3.js for data Visualization, Web-Based Applications for Visualization - Exploring Best Practices in Dashboard Design – Making Maps from Spatial Data.

UNIT V DATA VISUALIZATION TOOLKIT

Basic principles, categorical and continuous variables, exploratory graphical analysis, Creating static graphs, animated visualizations, loops, GIFs and Videos, Data visualization in Python.

Nº 102 1

Dr.A. Selwin Mich Priyadharson Head of the Department Bettronks & Communication Engineeries

Course Code	Course Title	L	Т	Р	С
10212EC230	AI IN SPEECH PROCESSING	2	0	2	3

Specialization Elective

b) Preamble

AI in Speech Processing provides an understanding about concepts, methodology and analysis of speech signals and also the basic speech recognition techniques and distortion measures to analyze the speech signal. Also, it gives the knowledge about the persuade of Artificial Intelligence in Speech recognition.

c) Prerequisite

Python Progamming

d) Related Courses

AI in Natural Language Processing

e) Course Outcomes

On successful completion of the course, students will be able to:

CO	Course Outcomes	Knowledge Level (Based on Revised
1105.		Bloom's Taxonomy)
CO1	Apply the basic concepts of speech signals and time domain representation in speech signal modelling	К3
CO2	Demonstrate the mathematical modeling for speech signal processing	K3
CO3	Illustrate the different speech recognition systems	K3
CO4	Utilize the AI methods for automatic speech recognition	К3
CO5	Develop a speech synthesis model by using AI techniques	К3

	PO	PSO	PSO											
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	Η	Н	-	-	М	-	-	-	Μ	L	-	-	-	-
CO2	Н	Н	L	-	М	-	-	-	-	-	-	-	-	-
CO3	М	М	L	-	М	-	-	-	М	L	-	-	-	М
CO4	М	L	L	-	М	-	-	-	М	L	-	-	-	М
CO5	М	L	-	-	М	L	-	-	М	L	-	_	-	М

g) Course Contents UNIT I FUNDAMENTALS OF SPEECH PROCESSING

The process of speech production - Mechanism of Speech production - Acoustic phonetics - acoustic theory of speech production - Digital models for speech signals - representing speech in the Time and Frequency Domains - Speech sounds and features

UNIT II MATHEMATICAL MODELLING OF SPEECH SIGNAL

Features and Pattern Comparison Techniques: Speech distortion measures – mathematical and perceptual models - Log Spectral Distance - Dynamic Time Warping - Multiple Time – Alignment Paths

UNIT III SPEECH RECOGNITION

Introduction to markov chain - Hidden Markov Model, definition - practical issues in using HMM - limitations, the generative model paradigm Speech Recognition - Speech Features - Auditory System as a Filter Bank - Cepstrum as a Spectral Analyzer - Linear Prediction

UNIT IV AUTOMATIC SPEECH RECOGNITION

Automatic Speech Recognition - Feature Extraction for ASR - Deterministic Sequence Recognition for ASR - Statistical Sequence Recognition -Evaluation methods

UNIT V AI TECHNIQUES IN SPEECH SYNTHESIS

Overview of Deep Neural Network - Deep Belief Network models for Music Synthesis - DBN for speech modeling \cdot Acoustic Modeling Using Deep Belief Networks \cdot DBN for Large Vocabulary and Speaker Verification - RNN-LSTM systems for speech recognition

List of Experiments

Sl. No.	Experiment Name	CO
1	Visualizing Audio Signals - Analyse an audio signal of 100 Hz, using Python	CO1
2	Generating Monotone Audio Signal using Python	CO1
3	Characterizing the Audio Signal using Python and convert it into frequency domain using Fourier Transform mathematical tool	CO2
4	Extract the MFCC features from speech signal	CO2
5	Isolated word recognition system	CO3
6	Silence determination in speech	CO3
7	Classification of Voiced/Unvoiced Speech	CO3
8	Transcribe continuous speech using online ASR	CO4
9	Pole Zero modelling of speech signal	CO4
10	Gender classification using pitch period analysis	CO5
11	Classification of happy and sad emotions in speech	CO5
12	LSTM, Deepspeech, Wav2vec use models for speech recognition	CO5

g) Course Content

UNIT I OVERVIEW OF INDUSTRY 4.0

Evolution of Industry 4.0-Environmental impacts of industrial revolution- Industrial Internet-Design requirements - Drivers of Industry 4.0 - sustainability assessment of Industries - Smart business perspective - cyber security - Cyber Physical System - impacts of Industry 4.0.

UNIT II BUSINESS MODELS AND REFERENCE ARCHITECTURE

Industrial process: Features, industrial plant- Business models: Categorization, Opportunities - reference architecture: categorization, Industrial Internet Reference Architecture (IIRA) framework - Off-site Technologies: Cloud Computing and Fog Computing for IIoT - On-site Technologies: Augmented Reality and Virtual Reality.

UNIT III INDUSTRIAL DATA ACQUISITION AND IIoT ANALYTICS 9

Industrial data acquisition: designing data acquisition using instrumentation amplifier-components of distributed control system, PLC basic programming, SCADA - IIoT analytics - necessity, categorization, usefulness, challenges, mapping of analytics with the architecture, deployment analytics.

UNIT IV INVENTORY MANAGEMENT, PLANT SAFETY AND SECURITY 9

Inventory management: types, benefits, quality control - Plant safety and security: IIoT applications for undertaking safety measures in plant, Software security, Network security, mobile device security.

UNIT V APPLICATIONS AND CHALLENGES

Health monitoring- IoT smart city - smart irrigation - UAVs in industries - manufacturing industry - automotive industry - mining industry - inventory management and quality control - challenges in Industrial IoT.

10212EC177	IOT SECURITY	3	0	0	3

Specialization Elective

b) **Preamble**

This course focuses on the principles and practices of securing Internet of Things (IoT) systems. It covers the security challenges, vulnerabilities, and threats in the IoT environment. The content provides in-depth knowledge to learn about various security mechanisms, protocols, and techniques to protect IoT devices, networks, and data. The training ingredients should enable the practical skills in implementing and evaluating IoT security solutions.

c) **Prerequisite**

Nil

d) Related Courses

Data Communication Network, Network Security.

e) Course Outcome

On successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the importance of security and privacy in IoT ecosystems.	K2
CO2	Outline the principles of device security, provisioning, and hardware-based security mechanisms.	K2
CO3	Infer the knowledge of data security principles and cloud storage.	K2
CO4	Summarize comprehensive threat intelligence and vulnerability assessments in IoT systems.	K3
CO5	Utilize the various privacy considerations and applications of IoT systems.	К3

g) Course Content

UNIT I FUNDAMENTALS OF IOT SECURITY

Introduction to IoT, security concern: confidentiality, authentication, data integrity, cyber threats and their detection, threat mitigation, malware resistance - device manipulation, risk management - device, communication, cloud level security for IoT ecosystem.

UNIT II DEVICE AND NETWORK SECURITY

Device security, secure bootstrapping and provisioning, hardware-based security, network security, intrusion detection and prevention systems, network architectures and network design, network segmentation and isolation.

UNIT III DATA AND CLOUD SECURITY

Data security, data encryption and integrity, privacy-preserving techniques for IoT, secure data storage and transmission - cloud security - secure cloud storage and processing, identity and access management in the cloud, security challenges and best practices in cloud-based IoT deployments.

UNIT IV INTELLIGENT IOT SECURITY MECHANISMS

Threat detection, trust mechanisms and key management, privacy preserving data aggregation, anonymization and pseudonymization, security monitoring techniques, threat intelligence and vulnerability assessment.

UNIT V EMERGING TRENDS IN IOT SECURITY

Blockchain technology: Smart Contracts for IoT, ethical hacking and penetration testing - heterogeneous intelligent transportation systems: autonomous vehicle security - fog platforms: secure data aggregation and processing for IoT applications.

g) Course Content

UNIT I FUNDAMENTALS OF AI

Evolution of AI- agents and environments- concept of rationality- nature of environmentsstructure of agents: problem solving agents, search algorithms, uninformed search strategies.

UNIT II KNOWLEDGE REPRESENTATION

Knowledge representation issues - predicate logic-logic programming- semantic nets- frames and inheritance - constraint propagation - representing knowledge using rules: rule-based deduction system.

UNIT III FUNDAMENTALS OF MACHINE LEARNING

Types of machine learning: Vapnik-Chervonenkis (VC) dimension, Probably Approximately Correct (PAC) learning- hypothesis spaces- inductive bias- generalization- bias variance trade-off.

UNIT IV NEURAL NETWORKS

Neural network representation: perceptron, feed forward, multilayer networks and back propagation, radial basis function network, recurrent neural networks, convolutional neural network.

UNIT V MACHINE LEARNING APPLICATIONS

Recommendation systems: weather prediction system, ML use cases in e-commerce, automated machine learning, diagnosis and disease identification, drug discovery, autonomous vehicle technology.

g) Course Content

UNIT I FUNDAMENTALS OF FLEXIBLE ELECTRONICS TECHNOLOGY 9

Materials for flexible electronics: Nanowire and nanoparticle synthesis, transition metal oxides, amorphous thin films, polymeric semiconductors - structure and property relationships of thin-film deposition - processing methods for flexible devices: CVD, PECVD, PVD, etching, photolithography - low-temperature process integration.

UNIT II THIN FILM TRANSISTORS

Materials and technologies- review of semiconductors employed in flexible electronics - thin film transistors based on amorphous indium gallium zinc oxide- plastic electronics for smart textiles.

UNIT III WORLD OF WEARABLE(WOW) AND HAPTICS

Emergence of wearable computing and wearable electronics- attributes- Types of wearable sensors: invasive, non-invasive- intelligent clothing, healthcare, military, environment monitoring-wearable haptic devices: benefits, categories and tactile display- Wearable Bio and chemical sensors: system design, challenges in chemical biochemical sensing- application areas.

UNIT IV WEARABLE INERTIAL SENSORS AND APPLICATIONS

Parameters and practical considerations for wearable inertial sensor applications in clinical practice- Measurement of energy expenditure by body-worn devices- design considerations.

UNIT V BIOPOTENTIAL SIGNALS CHARACTERISTICS

Electrode-body interface and electrode noise- Measurement of energy expenditure by body-worn devices-design considerations - Low power analog/digital integrated circuit design techniques for wearable bio potential sensors- architectural design for low power bio potential acquisition-practical considerations.

g) Course Content

UNIT I FUNDAMENTALS OF AUTOMOTIVE SYSTEMS

Introduction to the modern advancements and essential role of electronics in automobiles - possibilities and challenges in the automotive industry - enabling technologies and industry trends - application areas of electronics in the automobiles.

UNIT II POWERTRAIN SENSORS FOR CHASSIS MANAGEMENT 10

Powertrain sensors: Lambda (λ), exhaust temperature, nitrogen oxides, particulate matter, fuel quality, level, torque, speed, mass flow, manifold pressure wheel speed /direction, steering position (multiturn), acceleration (inertia measurement), brake pneumatic pressure, electronic stability.

UNIT III AUTOMOTIVE SENSOR FOR VEHICLE CONVENIENCE AND SECURITY SYSTEMS 9

Gas sensors (CO₂), temperature/humidity sensor, air bag sensor, tire pressure monitoring systems, anti-lock braking system, traction control, accelerators and tilt sensors for sensing skidding and anti-collision, anti-collision techniques using ultrasonic doppler sensors.

UNIT IV AUTOMOTIVE PASSENGER CONVENIENCE SYSTEMS

Distributed front air bag sensing systems, single-point sensing systems, side-impact sensing, and future occupant protection systems - electromechanical seat, seat belt height, steering wheel, mirror adjustments, central locking systems, tire pressure control systems, electromechanical window drives.

UNIT V MODERN TRENDS AND TECHNICAL SOLUTIONS

In-vehicle communication standards of Controller Area Network (CAN) and Local Interconnect Network (LIN) - telematics solutions, embedded connectivity - endorsing dependability in drive-by- wire systems: Terminology and concepts - Wire by-wire, FLEXRAY, future of in - vehicle communication.

g) Course Content

UNIT I MICROCONTROLLERS FOR IoT

Selecting the right microcontroller for IoT projects - Overview of popular microcontrollers (Arduino, ESP8266/ESP32, STM32).

UNIT II SENSORS AND ACTUATORS

Types of sensors and actuators - Interfacing sensors and actuators with microcontrollers.

UNIT III COMMUNICATION PROTOCOLS

Overview of IoT communication protocols: HTTP, MQTT, CoAP- implementing Wi-Fi and bluetooth connectivity.

UNIT IV POWER MANAGEMENT

Power requirements for IoT devices - Battery management and optimization - Energy harvesting techniques.

UNIT V APPLICATIONS OF IOT

Industrial IoT (IIoT) in manufacturing - IoT in healthcare – IoT in smart home.

10212EC236	ARM SYSTEM ARCHITECTURE	2	0	2	3

Specialization Elective

b) Preamble

This course introduces the fundamentals of ARM-based system architectures, focusing on processor core design, instruction sets, memory organization, interrupt mechanisms, and peripheral interfacing, enabling students to develop embedded solutions.

c) Prerequisite

Nil

d) Related Courses

Microprocessor and Microcontroller and Embedded Systems

e) Course Outcomes

On successful completion of this course students will be able to

CO Nos.	Course Outcomes	Knowledge and Skill Level (Based on RBT & Dave's Taxonomy)
CO1	Build and explain the ARM processor architecture and pipeline operation.	K3, S3
CO2	Utilize and outline the ARM and Thumb instruction sets and their applications.	K3, S3
CO3	Analyze and apply the memory hierarchy, protection, and management in ARM systems.	K4, S3
CO4	Develop and interpret an embedded applications using ARM peripherals and interfaces.	K3, S3
CO5	Make use of an exception handling and interrupt mechanisms in ARM cores.	K3, S3

CO5	М	М	-	-		-	-	-	-	-	Н	-	-

g) Course Content

UNIT I ARM ARCHITECTURE FUNDAMENTALS

Evolution of ARM architecture – RISC principles – ARM processor families – core and architecture features – registers and pipeline structure – processor modes and state transitions.

UNIT II ARM INSTRUCTION SET

ARM Instruction set – data processing, branch, load/store instructions – PSR and conditional execution – Introduction to thumb instruction set – Thumb vs ARM tradeoffs

UNIT III MEMORY MANAGEMENT AND PROTECTION

Memory system architecture – cache architecture – Memory protection unit (MPU) – Translation Lookaside Buffers (TLB) – virtual memory – address space partitioning.

UNIT IV PERIPHERALS AND INTERFACING

Advanced Microcontroller Bus Architecture (AMBA): History, bus types and protocol – UART, SPI, I2C, GPIO – timer, watchdog timer – interfacing memory and I/O devices – power management features.

UNIT V EXCEPTION AND INTERRUPT HANDLING

Exception types – vector table – interrupt latency and interrupt handling – fast interrupt requests and standard IRQ – Nested Vectored Interrupt Controller (NVIC).

g) Course Content

UNIT I EMBEDDED LINUX FUNDAMENTALS

History of Embedded Linux, Embedded vs Desktop Linux, Embedded Linux Distributions, Linux Kernel Architecture, Linux Startup Sequence, GNU Cross-Platform.

UNIT II BOARD SUPPORT PACKAGE AND EMBEDDED STORAGE 6

BSP integration into kernel, Boot Loader Interface, Memory Map, Interrupt Management, PCI Subsystem, Timers, UART, Power Management. MTD Architecture, Flash Mapping Drivers, Embedded File Systems, Storage Space Optimization.

EMBEDDED LINUX KERNEL AND DRIVERS UNIT III

Kernel Features, Subsystems: Memory, Scheduler, Storage, I/O, Networking. Kernel Source Navigation, Configuration, Compilation. Booting with U-Boot, Module Compilation and Installation, Adding Device Drivers, Applying Kernel Patches. Drivers: Serial, Ethernet, I2C, USB Gadgets, Watchdog Timer

UNIT IV EMBEDDED FILE SYSTEM AND OPTIMIZATION

Embedded File Systems: RAMDisk, RAMFS, CRAMFS, JFFS, JFFS2, NFS, PROC. Kernel vs Application Space Optimization. Building RootFS and tuning for performance.

LINUX DEVICE DRIVERS UNIT V

Application Porting Roadmap, Programming with Pthreads, OS Porting Layer, Kernel API for Driver Porting. Linux as a Real-Time OS, Real-Time Programming Techniques, Comparison with RTOS variants like VxWorks, RT-Linux, Portable Software on Silicon (pSOS)

g) Course Content

UNIT I INTRODUCTION TO SOC CHIP DESIGN FLOW

Introduction to SOCs, technology trends, design challenges, SOC chip design flow, Verilog syntax and constructs alternatives, FPGA design flow.

INTEGRATION OF DIGITAL AND ANALOG IPs IN SOC DESIGN UNIT II

Digital IPs - ARM Cortex-M3, UART, Analog IPs - PLLs, ADC, DAC, communication architectures - AMBA (AXI, AHB, APB), interfacing techniques and challenges.

UNIT III SOC VERIFICATION

Overview of verification techniques, verification levels: block-level, integration-level, SOClevel, test benches and assertions, introduction to Universal Verification Methodology (UVM).

UNIT IV SCRIPTING LANGUAGES FOR CHIP DESIGN AUTOMATION

Introduction to scripting languages (TCL and Perl), role of scripting in EDA tool flows, TCL basics - TCL syntax and data types, variables, procedures and file handling, Perl basics- Perl syntax and scripting style, scalars, arrays and hashes.

RAPID PROTOTYPING WITH FPGAs AND EMULATION HARDWARE UNIT V VALIDATION 6

Rapid prototyping using FPGAs, FPGA prototyping of hardware/software systems, validation of designs using emulation hardware.

g) Course Content

UNIT I OVERVIEW OF SYSTEM ON CHIP DESIGN PROCESS

Types of SOCs: Application-specific, Configurable, Programmable - SOC vs. ASIC vs. FPGA- design challenges and trends.

UNIT II SOC ARCHITECTURE AND PROCESSOR INTEGRATION

Components of SOC: CPU, memory, system buses: AHB, APB, AXI-clocking, resets, power domains SOC boot process and memory maps- integrating soft cores: micro blaze, Nios II.

UNIT III ADVANCED SOC PROCESSORS AND PERIPHERALS

ARM, RISC-V, and soft-core CPUs: PicoRV32, micro blaze-hardware design using Verilog-UART, SPI, I2C, GPIO.

UNIT IV SOC APPLICATIONS

Building a simple RISC-V SOC - integrating a CNN accelerator- audio/video processing SOC-sensor based embedded SOC.

UNIT V SOC ON PHYSICAL DESIGN

Physical design flow - floor planning: die size estimation, power planning and placement of macros and IO pads - power planning-placement: standard cell placement, congestion analysis and placement optimization -routing: global and detailed routing-clock tree synthesis: static timing analysis, setup and hold time checks.

g) Course Content

UNIT I VLSI DESIGN CYCLE

Introduction to VLSI design methodologies – top-down and bottom-up methodologies- VLSI design cycle — physical design cycle – design styles – VLSI design automation tools.

UNIT II VLSI CAD AND LOGIC SYNTHESIS ALGORITHM

Overview of CAD algorithms and tools in VLSI design. basics of data structures and algorithms – algorithmic graph theory and computational complexity – tractable and intractable problems – general purpose methods for optimization techniques in logic synthesis.

UNIT III PARTITIONING AND PLACEMENT

Layout compaction – problem formulation – algorithms for constraint graph compaction – partitioning – placement – placement algorithms.

UNIT IV FLOOR PLANNING AND ROUTING

Floor planning – problem formulation – floor planning algorithms – routing – area routing – global routing – detailed routing.

UNIT V MODELLING, SIMULATION AND SYNTHESIS

Simulation – gate level modeling and simulation – logic synthesis and verification – binary decision diagrams – high level synthesis.

g) Course Content

UNIT I FPGA AND HDL

Types of PLDs: PAL, GAL, CPLD, FPGA – FPGA Architecture: Xilinx Artix-7, Intel Cyclone - Verilog modelling styles: dataflow, behavioral, and structural modelling.

UNIT II RTL DESIGN AND SIMULATION

FSM design: Mealy and Moore machines - RTL coding in Verilog: blocking/non-blocking assignments - test bench development: stimulus generation, self-checking test benches.

UNIT III FPGA DESIGN FLOW AND TIMING

Synthesis fundamentals: HDL to gate-level netlist - FPGA implementation: mapping, placing, and routing - STA: setup and hold time - clocking resources: global and local clocks.

UNIT IV IP CORES AND MEMORY SYSTEMS

Memory interfacing: SRAM, DRAM, and Flash memory – peripheral interfacing protocols: UART, SPI - IP core integration and custom IP creation: using IP integrator in Vivado

UNIT V FPGA FOR REAL TIME APPLICATIONS

Traffic light controller, real time clock, vending machine using one hot controller - interfacing using FPGA: VGA, keyboard, LCD

2.	Design and simulate a 4-bit multiplier using Xilinx Vivado.	CO1
3.	Design a 3-state traffic light FSM (Moore machine) and simulate in Verilog.	CO2
4.	Develop testbench for a 4-bit ALU performing arithmetic operations.	CO2
5.	Implement and synthesize a 4-bit counter using Xilinx Vivado and obtain the timing summary.	CO3
6.	Demonstrate the timing report of a shift register using setup/hold timing violations.	CO3
7.	Design and simulate UART communication using IP core in Vivado for byte transfer.	CO4
8.	Perform integration of a prebuilt SRAM controller IP core to access memory via FPGA logic.	CO4
9.	Implement a vending machine FSM using one-hot encoding in Verilog.	CO5
10.	Perform the task to interface 16x2 LCD display to FPGA via GPIO control (write "HELLO").	CO5
11.	Mini project: base design for image classification using prebuilt IP	CO5

Total: 60 Hrs.

Specialization Elective

b) Preamble

This course provides an in-depth understanding of top-down device fabrication. It focus on the unit processes which typically used in micro fabrication of devices. Topics include crystal growth, doping, chemical vapor deposition, physical vapor deposition, photolithography, wet etching, dry etching and packaging.

c) Prerequisite

Nil

d) Related Courses Nil

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Make use of the concepts of crystal structures, energy band theory, and material properties for select appropriate growth techniques for various semiconductor applications.	K3
CO2	Apply the principles of carrier transport, doping, and material properties to analyze current-voltage characteristics of p–n junctions in semiconductor devices	K3
CO3	Outline the semiconductor fabrication processes which involved in wafer preparation and device manufacturing	K3
CO4	Utilize the working principles of various semiconductor devices to analyze their structure and operational behavior.	К3
CO5	Organize the various microfabrication techniques to outline the process flow in integrated circuit fabrication and advanced CMOS technologies	К3

g) Course Content

UNIT I SEMICONDUCTOR MATERIALS

Review of the basic crystal structures of semiconductors energy structures and energy bandgaps - group IV- group III-V - group II - VI semiconductors- alloyed semiconductor materials - wide bandgap semiconductors - newly emerging 2D semiconductors.

UNIT II PHYSICAL PROPERTIES OF SEMICONDUCTOR MATERIALS 9 Carrier-transport phenomena - drift and mobility - doping effects - optical and thermal properties of semiconductor materials - physical model and current-voltage curve of p–n junctions - metal-semiconductor contact- physical model and current-voltage curve of Schottky junctions.

UNIT III SEMICONDUCTOR FABRICATION

Semiconductor process- semiconductor technologies and trends- basic fabrication steps: oxidation - photolithography – etching - diffusion - Ion Implantation – metallization - clean room - safety requirements.

UNIT IV SEMICONDUCTOR DEVICES

BJT - structure and switching - working mechanism of FET - CMOS structure – FinFET-structure- charge coupled device - thin film transistors Phototransistor/detector - light- emitting diode-Laser diode.

UNIT V MICROFABRICATION TECHNOLOGY

Introduction to cleanroom - basic silicon wafer processing - Chemical vapor deposition (CVD) - Evaporation - sputter deposition- Ion implantation – photolithography - wet processing - plasma processing - advanced CMOS technologies - Introduction to integrated circuit designs - packaging technology for integrated circuits.

Specialization Elective

b) Preamble

This course explores the integration of Artificial Intelligence (AI) and Machine Learning (ML) techniques in the field of VLSI CAD. AI and ML methodologies can be applied to automate and enhance various stages of the VLSI design process. Case studies will illustrate the use of AI and ML in addressing challenges and improving the efficiency of VLSI CAD tools.

c) Prerequisite

Python

d) Related Courses

VLSI CAD

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge and Skill Level (Based on RBT& Dave's Taxonomy)
CO1	Organize the AI and ML techniques to establish their relevance in addressing VLSI CAD design challenges.	K3, S3
CO2	Make use of automation, synthesis, and optimization techniques integrated with ML in VLSI design tools.	K3, S3
CO3	Construct suitable AI algorithms for enhancing synthesis and optimization in VLSI CAD.	K3, S3
CO4	Develop ML-based solutions for automatic layout generation and design rule checking in VLSI design modelling.	K3, S3
CO5	Apply AI/ML techniques to solve real-time VLSI applications involving physical design and diagnostics.	K3, S3

g) Course Content

UNIT I AI AND ML IN VLSI CAD

Overview of AI and ML- need for AI / ML in VLSI- supervised and unsupervised learning - VLSI CAD: logic synthesis, timing correlation, placement and routing - benefits - challenges and limitations.

UNIT II AUTOMATION, SYNTHESIS AND OPTIMIZATION TECHNIQUES WITH ML. 6

CAD tools: design automation - lithography - physical design - physical verification - mask synthesis - optimization: layout and system level - fault detection - diagnosis in VLSI circuits automatic optimization.

UNIT III AI ALGORITHMS AND OPTIMIZATION IN VLSI CAD 6

Algorithms- Decision tree - Random Forest- Gradient Boosting - ensemble models Optimization algorithms: Genetic algorithm - Simulated annealing - particle swarm optimization - Design Challenges for Machine/Deep Learning Algorithm.

UNIT IV AUTOMATIC LAYOUT GENERATION AND DESIGN RULE **CHECKING WITH ML**

ML techniques - physical design automation - automated layout generation: area optimization, power reduction and signal integrity - design rule checking: classification and regression models -ML based layout optimization and AI enhanced DRC tools.

6

UNIT V APPLICATIONS AND CASE STUDY OF AI IN VLSI

Applications in data modelling, Physical design, and logic optimization- Case Study: health monitoring system, Safety alert system and CNN for Hardware Acceleration

h) List of Experiments

S.No.	Practical Exercises (30 Hours)	CO Mapping
1.	Simulate the supervised learning for logic gate classification	CO1
2.	Apply K-Means to cluster logic blocks by power or delay characteristics.	CO1
3.	Simulate stuck-at faults; build classifiers to detect them from test patterns.	CO2
4.	Use Q-learning to select logic transformations	CO2
5.	Apply GA to reduce gate count in logic expressions.	CO3
6.	Apply reinforcement learning for optimizing logic expressions.	CO3
7.	Simulate ML-based layout placement prediction using regression	CO4
8.	Detect DRC violations in layout images using a Convolutional Neural Network	CO4
9.	Simulate the timing violation prediction in physical design using ML	CO5
10.	Build and test a simple CNN using Tensor flow.	CO5

Total: 60 Hrs.

CO5	Н	М	М	L	-	-	-	-	-	-	М	-	М	-

g) Course Content

UNIT I DESIGN FOR TESTABILITY

Importance of design for testability in modern electronic systems: Historical context and evolution of testability strategies. Introduction to key concepts: fault models, stuck-at faults, Bridging faults, intermittent faults testing methodologies, and industry standards.

UNIT II TEST GENERATION

Test generation for combinational logic circuits – manual test pattern generation, automatic test pattern generation- Testable combinational logic circuit design – test generation for sequential circuits – design of testable sequential circuits.

UNIT III BUILT IN SELF TEST

Principles and implementation of built-in self-test techniques, advantages and limitations of BIST in electronic circuit testing. built-in self-test – test pattern generation for BIST – circular BIST – BIST architectures – testable memory design – test algorithms – test generation for embedded RAMs

UNIT IV SCAN CHAINS AND SERIAL TESTING

Scan design, partial scan, use of scan chains, boundary scan, scan chain architecture, ATPG for scan, vector application in scan mode, shift-register based testing, trade-offs in serial vs. parallel scan

UNIT V FAULT DIAGNOSIS

Fault diagnosis: Fault models for diagnosis, cause-effect diagnosis, effect-cause diagnosis, logical level diagnosis – diagnosis by UUT reduction – fault diagnosis for combinational circuits – self-checking design – system level diagnosis.

g) Course Content

UNIT I AI CIRCUIT DESIGN

Introduction - AI algorithms, acceleration, and neural network architectures - Overview of AI circuit design in modern technology - Neural networks in conventional integrated technology, Near-sensor computing, Neural network based on emerging non-volatile memory.

UNIT II AI CIRCUIT PRINCIPLES

Principles of design methodologies for AI applications - Techniques for optimizing efficiency and performance in AI circuits - Directional Derivatives, Minima, Necessary Conditions, Newton's Method, Conjugate gradient method, The Levenberg-Marquardt algorithm.

UNIT III NEUROMORPHIC COMPUTING AND HARDWARE ACCELERATORS 9

Neuromorphic computing principles - Memristive and CMOS devices for neuromorphic computing architectures, Multi-terminal transistors for neuromorphic applications, Bipolar analog memristors for neuromorphic computing - Hardware accelerators for AI tasks.

UNIT IV PARALLEL PROCESSING ARCHITECTURES FOR AI

Principles of parallel processing architectures and their applications in AI circuits - VLSI design of a 3-D parallel message-passing architecture - Dataflow architecture for AI, Processing inmemory design - Design considerations and challenges in achieving parallelism for AI.

UNIT V OPTIMIZATION OF AI CIRCUITS

Techniques for optimizing of AI circuits for efficiency - Computing algorithms, Arithmetic by table lookup - High-throughput arithmetic, Low-power arithmetic, Impact of hardware technology - Case study: Analyzing successful implementation of optimized AI circuits.

g) Course Content

UNIT I **INTRODUCTION TO IC PACKAGING**

Evolution of IC Packaging, Performance, and Design for IC; Types of Integrated Circuits; IC Packaging; Semiconductor Roadmap; IC Packaging Challenges; Electronic Packaging Technologies.

UNIT II PACKAGING MATERIALS AND INTERCONNECTIONS

The Role of Materials in Microsystems Packaging, Packaging Materials and Properties, Materials Processes, Interconnections, Signal Distribution-Devices and Interconnections, Capacitive Delay Interconnections.

UNIT III SINGLE AND MULTI-CHIP PACKAGING

Functions of single-chip package, types of SIP, fundamentals of SIP, materials, processes, and properties, characteristics of single-chip packages, multi-chip modules, multi-chip modules and advantages, types of multi-chip module substrates—MCM-L, MCM-C, and MCM-D— and MCM design.

UNIT IV THERMAL MANAGEMENT AND IC ASSEMBLY

Fundamentals of thermal management, thermal management of IC and PWB packages, and electronic cooling methods - purpose of IC assembly, requirements for IC assembly, IC assembly technologies, wire bonding, tape automated bonding, flip chip.

UNIT V **IC RELIABILITY**

Fundamentals of thermomechanical reliability, importance of reliability, reliability meteorology, reliability qualifications, thermomechanical failure analysis, experimental methods and tools for reliability analysis, and integrated virtual reliability prediction.

g) Course Content

UNIT I SEQUENTIAL CIRCUIT DESIGN USING SYSTEMVERILOG

Synchronous and asynchronous sequential circuits – FSM: Adder, counter design – LUT concept – SystemVerilog programming.

UNIT II VERIFICATION IN DIGITAL DESIGN

Verification in digital system design – verification process: – verification plan – debug cycle – simulation – output data, test bench development – current verification techniques: HDL software simulators, accelerated simulation, process based accelerator techniques, FPGA prototyping.

UNIT III FORMAL VERIFICATION PRINCIPLES

Introduction, advantages of formal verification, bug hunting, exploring designs – formal verification algorithms: BDD (Binary decision diagrams), DAVIS PUTNAM SAT algorithm – SystemVerilog assertions – formal property verification.

UNIT IV INDUSTRY-STANDARD VERIFICATION TOOLS

Industry standard verification tool Questa, VCS – tool functionalities and features, examples – SystemVerilog verification, constructs

UNIT V CASE STUDIES AND REAL-WORLD APPLICATIONS

Case studies of verification challenges in real world digital designs: traffic light controller – creating design exercise plan – wiggling process – applying verification tools and techniques to real-world scenarios.

g) Course Content

UNIT I ARTIFICIAL INTELLIGENCE FUNDAMENTALS

Basic definitions and terminology - Foundation of AI - History of AI - The State of the Art - Intelligent Agent - How Agents should Act? Structure of Intelligent Agents - Environments.

UNIT II PROBLEM SOLVING

Problem solving Agents - Formulating problems – Examples - Searching for solutions - Search Strategies - Informed search methods - Best-first search - Heuristic Functions - Memory bounded search - Iterative improvement algorithms.

UNIT III KNOWLEDGE AND REASONING

Knowledge-based agent - Representation - Reasoning and Logic - Propositional logic - Inference in First-Order Logic - Forward and backward chaining - Logical Reasoning system- indexing - retrieval and unification.

UNIT IV MACHINE LEARNING FUNDAMENTALS

Ingredients of Machine Learning – Tasks – Models – Geometric – probabilistic – logical - grouping and grading – Features- construction and transformation - interaction between features - Types of Learning – Supervised - Unsupervised and Semi-Supervised Learning.

UNIT V CLASSIFICATION AND REGRESSION

Binary and Multiclass Classification - Handling more than two classes - Multiclass scores and probabilities – Regression - Unsupervised and descriptive learning - predictive and descriptive clustering.

Honor Elective

b) Preamble

This course imparts knowledge in recent wireless technologies and networks. It covers 5G wireless systems, massive multiuser system, wireless LAN, wireless protocols and advanced mobile networks.

c) Prerequisite

Wireless Communication

d) Related Courses

Microwave and Millimeter wave communication

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Interpret the evolution and requirements of the 5G wireless system	K2
CO2	Explain the massive MIMO technology and channel modeling of millimeter wave communication.	K2
CO3	Classify different wireless LAN technologies.	K2
CO4	Describe the network and transport layer solutions for wireless standards	K2
CO5	Discuss the current trends in advanced communication networks	К2

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO 10	PO 11	PO 12	PSO1	PSO2

CO5	М	М	Н	М	М	Н	М	_	L	М	_	Н	_	_

g) Course Content

UNIT I OVERVIEW OF 5G

Development of LTE towards 5G – Extreme mobile broadband – 5G Architecture: Basics of RAN Architecture, High level requirements, 5G deployment – Waveform in 5G: OFDM, NOMA

UNIT II MASSIVE MIMO FOR 5G

Massive MIMO: Point to point MIMO, Multi User MIMO, Pilot design for massive MIMO – Resource allocation and transceiver algorithm- Channel modeling in mm wave communication-Large Scale Channel Model, MIMO Spatial Channel Model

UNIT III WLAN TECHNOLOGIES

WLAN technologies: IEEE802.11 – System architecture, 802.11a , 802.11b – HIPER LAN: HIPER LAN1, WATM, BRAN, HIPER LAN2 – Bluetooth – IEEE 802.11ad (60 GHz WLAN) – IEEE 802.15 PHY and MAC overview.

UNIT IV WIRELESS PROTOCOLS

Mobile network layer – Fundamentals of Mobile IP: data forwarding procedures in mobile IP, IPv4, IPv6, IP mobility management, IP addressing – DHCP – Mobile transport layer: Traditional TCP, congestion control, Indirect TCP, snooping TCP, Mobile TCP.

UNIT V ADVANCED MOBILE NETWORKS

Drone networking – Multi-UAV networks, Architectures, Protocols for micro UAVs, Connected and Autonomous Vehicles (CAV)– Wireless technologies for Vehicle-to-Infrastructure (V2I) and Vehicle-to-Vehicle (V2V) communications.

Honor Elective

b. Preamble:

The aim of the course is to introduce students to the fundamentals of machine learning and to apply the advanced machine learning principles for the design and optimization of wireless communications systems

c. Prerequisite Courses:

Wireless Communication

d. Related Courses:

Cellular Mobile communication

e. Course Outcomes:

CO Nos.	Course Outcomes	Level of learning domain (Based on revised Bloom's)
CO1	Demonstrate various ML algorithms for spectrum sharing and channel allocation in a wireless system.	К2
CO2	Make use of the concepts of ML for resource allocation and system-level modeling.	К3
CO3	Apply the concept of ML-based signal modulation and coding techniques	К3
CO4	Solve the concept of ML-based channel coding and decoding algorithm	К3
CO5	Explain various ML-based optimization techniques in wireless communication systems.	K2
f). Correlation of COs with POs and PSOs

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO5	М	L	М	Н	М	-	-	L	-	-	L	-	-	L

g. Course Content:

UNIT I Machine Learning (ML) for Spectrum Access and channel Allocation 9 Machine Learning Algorithms for Opportunistic Spectrum Access, Background and Motivation, Learning Algorithms for Channel Allocation, System Model and Problem Formulation, Hybrid Solution Approach.

UNIT II Optimal Resource Allocation using ML

System Model, Resource Minimization Approaches, Numerical Results, Mobile Crowd sensing, ML-Based Context-Aware Data Transmission, Methodology for Real-World Performance Evaluation, Results of the Real-World Performance Evaluation.

UNIT III Machine Learning–Based Adaptive Modulation and Coding Techniques 9

SL-Assisted AMC, RL-Assisted AMC, Adaptive Learning for Symbol Detection: Preliminaries, System Model, Reproducing Kernel Hilbert Space Approach for symbol detection.

UNIT IV Joint Channel Equalization

Neural Network-Based Channel Equalization, Principles of Equalization and Detection, Performance of OFDM Systems with Neural Network-Based Equalization, Channel Coding with Deep Learning: Channel Coding and Deep Learning, DNNs for Channel Coding, CNNs for Decoding, RNNs for Decoding.

UNIT V Optimization Techniques

Self-Organizing Wireless Networks, Traffic Prediction and Machine Learning, Cognitive Radio and Machine Learning, Machine Learning optimization Techniques for Autonomous Network Management, Data-Driven Base-Station Sleeping optimization by Deep Reinforcement Learning.

CO5	М	L	_	_	L	-	L	-	-	-	М	L	-	_

f) Correlation of COs with POs and PSOs

g) Course Content

UNITI WIRELESS NETWORKS ARCHITECTURE

Review of wireless networks architecture - technology and standards - Introduction to LTE - Architecture of the LTE - Air Interface - Evolution from 4G to 5G - Enabling Technologies for 5G

UNITII NETWORK OPTIMIZATION

Convex vs. non-convex problems, duality theory, decomposition methods for network utility maximization, multi-objective problems, and Pareto optimality. Applications to Cross-layer Optimization

UNITIII GAME THEORY

Basic Concept of Game Theory, History, Applied areas, Classification of Games, Cooperative Games - Non-cooperative Games, Evolutionary Games.

UNITIV GAME THEORY IN COMMUNICATION AND NETWORKING 9

Uplink power control in CDMA Networks: Single cell CDMA networks, Multicell Wireless CDMA networks, Resource allocation in single cell OFDMA networks, OFDMA resource Allocation modal, Power allocation in femto cell networks: Femto cell power control as a stackelberg game

UNITV APPLICATIONS

Applications of cognitive radio networks, Heterogeneous networks using supervised and unsupervised learning, Network intelligence in IoT design, 6G wireless networks.

10212EC142	OPTIMIZATION FOR WIRELESS AND MACHINE LEARNING	3	0	0	3

Honor Elective

b. Preamble

This course enables students to understand various optimization methods that underlie machine learning techniques, discussions on their uses, as well as provide opportunities to develop the concepts in various communication systems.

c. Prerequisite courses

Nil

d. Related Courses

Machine learning for Wireless Communication, Introduction to artificial intelligence and machine learning

e. Course Outcomes

Upon the successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on revised Bloom's Taxonomy)
CO1	Explain the fundamentals of optimization and describe their applications.	K2
CO2	Solve convexity optimization problems in multi-user wireless systems.	K3
CO3	Apply quadratic optimization and duality principle in MIMO OFDM systems.	K3
CO4	Discuss optimization techniques for signal and channel estimation and apply convexity for PCA and SVM.	K2
CO5	Illustrate the concepts of geometric optimization for co-operative communication and radar systems.	K3

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

CO5	Н	М	L	-	L	-	М	L	L	L	-	L	-	-

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I BASICS OF OPTIMIZATION

Properties of Vectors - Norms - Positive - Semi-Definite matrices and Gaussian -Random Vectors. Introduction to Convex Optimization - Convex sets - Hyperplanes / Half-spaces etc - Application - Power constraints in Wireless Systems.

UNIT II CONVEX OPTIMIZATION

Convex / Concave Functions - Examples - Conditions for Convexity - Beamforming in Wireless Systems - Multi-User Wireless - Cognitive Radio Systems - Convex Optimization problems -Linear Program.

UNIT III QUADRATIC OPTIMIZATION AND DUALITY

Quadratically constrained quadratic program (QCQP) - Second order cone programming (SOCP) - Channel shortening for Wireless Equalization - Duality principle and KKT framework for optimization - Water-filling power allocation - Optimization for MIMO Systems - OFDM Systems and MIMO-OFDM systems.

UNIT IV SIGNAL AND CHANNEL ESTIMATION

Optimization for signal estimation - LS - WLS - Regularization - Wireless channel estimation - Convex optimization for Machine Learning - Principal Component Analysis (PCA) - Support Vector Machines.

UNIT V GEOMETRIC OPTIMIZATION

Cooperative Communication - Optimal Power Allocation - Geometric Program - Radar for target detection - Array Processing.

g) Course Content

UNIT I mm WAVE PROPAGATION CHANNEL

Millimeter wave characteristics- millimeter wave wireless- implementation challenges- Radio wave propagation for mm-wave: Large scale propagation channel effects- small scale channel effects- Outdoor and Indoor channel models- Emerging applications of millimeter wave communications.

UNIT II mm WAVE DEVICES AND CIRCUITS

Millimeter wave generation and amplification: Peniotrons- Ubitrons- Gyrotrons and Free electron lasers. HEMT- models for mm-wave Transistors- transistor configurations- Analog mm-wave components: Amplifiers- Mixers- VCO- PLL. Metrics for analog mm-wave devices- Consumption factor theory- Trends and architectures for mm-wave wireless- ADCs and DACs.

UNIT III mm WAVE COMMUNICATION SYSTEMS

Modulations for millimeter wave communications- Millimeter wave link budget- Transceiver architecture- Transceiver without mixer- Receiver without Oscillator- Millimeter wave calibration- production and manufacture- Millimeter wave design considerations.

UNIT IV mm WAVE MIMO SYSTEMS

Massive MIMO Communications- Spatial diversity of Antenna Arrays- Multiple Transceivers-Noise coupling in MIMO system- Potential benefits for mm-wave systems- Temporal and Frequency diversity- Dynamic spatial- frequency and modulation allocation.

UNIT V ANTENNAS FOR mm WAVE SYSTEMS

Antenna beamwidth- polarization- advanced beam steering and beam forming- mm wave design consideration- On-chip and In package mm-wave antennas- Techniques to improve the gain of on-chip antennas- Implementation for mm-wave in adaptive antenna arrays- Device to Device communications over 5G systems- Design techniques of 5G mobile.

UNIT I EMERGING OPTICAL COMMUNICATION TECHNOLOGIES FOR 5G

Optical interfaces for wireless - common public radio interface - Evolved CPRI - Next generation fronthaul interface - Optical transmission technologies for X-haul - Optical Transport Network - Software Defined Network Fundamentals - Industry standards and development for 5G oriented optical networks.

UNIT II INTRODUCTION TO ARTIFICIAL INTELLIGENCE

History of AI - Overview of Artificial Intelligence - Machine Learning and Deep Learning-Supervised and Unsupervised Learning - Reinforcement Learning - Key Technologies to make 5G in reality using AI - AI assisted networks - Transforming optical industries by AI - AI subfields and techniques applied to optical networks.

UNIT III ARTIFICIAL INTELLIGENCE IN OPTICAL COMMUNICATIONS 9

Convolutional neural network for Image data – Convolution – Polling - Down-sampling operation – Activation - Nonlinear operation - Recurrent neural network for sequential data - End to end for Joint Optimization With DL-Based Channel Model - Generative Adversarial Network for Data Augmentation - Deep Reinforcement Learning for Network Automation.

UNIT IV OPTICAL NEURAL NETWORK ARCHITECTURES

Optical realizations of perceptron - Perceptron pattern classification using Planar Interconnection Devices - Volume Holograms - Optical realizations of multilayer perceptron's - optoelectronic realizations of multilayer perceptron - All optical realizations of multilayer perceptron - Optical realizations of Self organizing neural networks - Coherent self-organized Kohonen networks - Optical realizations of Hopfield and Boltzman neural networks.

9

9

UNIT V APPLICATIONS OF AI IN OPTICAL NETWORKS

Applications of AI in optical transmission: Characterization and operation of transmitters - EDFA- Receivers and mitigation of nonlinearities - QoT estimation, Applications of AI in optical networking: Software defined networking - Optical burst switching - Passive optical networks - Intra-datacenter networking, New opportunities and challenges for the use of AI in optical networks: Optical transmission systems attack and intrusion detection - Automating network management operations - Applications in on-chip networks

g) Course Content

UNIT I ANTENNA ARRAY FUNDAMENTALS

Overview of Antenna Arrays- Beam steered Linear Array. Array Weighting – Binomial-Blackman- Hamming- Gaussian- Kaiser- Bessel. Circular Arrays- Beam steered Circular arrays- Rectangular planar arrays- Fixed Beam Arrays- Butler Matrices- Fixed side lobe cancelling- Retro directive arrays- Passive and active retro directive array.

UNIT II PROPAGATION CHANNEL CHARACTERISTICS

Flat Earth Model- Multi path Propagation mechanisms- Propagation channel basics – Fadingfast fading model- multipath with no direct path- multipath with direct path- motion in a fast fading channel- Channel impulse response- Power delay profile- Power angular profilepower delay – angular profile- Channel dispersion- Slow fading model.

UNIT III SMART ANTENNAS

Need for Smart Antennas- Smart antenna configurations- Switched beam antennas- Adaptive antenna approach- Space division multiple access- Architecture of smart antenna system-Basic principles- Mutual coupling effects.

UNIT IV ANGLE OF ARRIVAL ESTIMATION

Array Correlation Matrix- Angle of arrival (AOA) Estimation methods- Bartlett- Capon-Linear prediction- Maximum Entropy- Min-Norm- MUSIC- Root MUSIC- and ESPRIT.

UNIT V BEAMFORMING TECHNIQUES

Fixed weight beam forming- Maximum signal to interference ratio- Minimum mean square-Maximum likelihood- Minimum Variance. Adaptive beam forming- Least mean squaresample matrix inversion- recursive least squares- constant modulus- least squares constant modulus- conjugate gradient method- spreading sequence array weights- SDMA Receiver.

g) Course Content

UNIT-1 INTRODUCTION

Issues in Digital IC Design- Quality Metrics of a Digital Design: Cost of an Integrated circuits, Functionality and Robustness, Performance, Power and Energy Consumptions-Packaging Integrated Circuits-Trends in Process Technology.

UNIT-2 IMPLEMENTATION STRATEGIES FOR DIGITAL ICs

Custom Circuit Design, Cell-Based Design Methodology, Standard Cell, Compiled Cells, Macro cells, Mega cells and Intellectual Property, Semi-Custom Design Flow, Array-Based Implementation Approaches, Pre-diffused (or Mask-Programmable) Arrays, Prewired Arrays.

UNIT-3 DESIGNING ARITHMETIC BUILDING BLOCKS

Data paths in Digital Processor Architecture-Adder: Definitions-Circuit design Circuit Design Considerations, Logic Design Considerations-Multiplier: Partial- Product Generation, Partial Product Accumulation, Final Addition, Multiplier Summary, The Shifter, Barrel Shifter, Logarithmic Shifter- Performance and power optimizations in data path structures.

UNIT-4 DESIGNING SEQUENTIAL LOGIC AND MEMORY DESIGN 9

Introduction - Static Latches and Registers - Dynamic Latches and Registers - Pulse Based Registers - Sense Amplifier based registers -Pipeline structures. Designing Memory & Array structures: SRAM and DRAM Memory Core – memory peripheral circuitry- Memory reliability and yield - Power dissipation in memories.

UNIT-5 INTERCONNECTS AND TIMING ISSUES

Interconnect Parameters: Resistive, Capacitive and Inductive Parasitic – Computation of R, L and C for given interconnects-Buffer Chains-Timing classification of digital systems-Synchronous Design-Origins of clockSkew/JitterandimpactonPerformance-ClockDistributionTechniques - Latch based clocking - Synchronizers and Arbiters -Clock Synthesis and Synchronization using a Phase Locked Loop.

Course Code	Course Title	L	Т	Р	С
10212EC146	MIXED SIGNAL VLSI DESIGN	3	0	0	3

Program Elective

b) Preamble

This course highlights the design of some important system blocks like Filters (Continuous, Discrete and Digital), Data Converters (ADC and DAC), Phased lock Loops, Interconnects in such systems and Mix signal Circuit Layout technique. The Course emphasizes on Techniques one needs to adopt for implementation of Mixed Signal System as Integrated Circuit. It presents a detailed information on various Blocks of such a system required and their conflicting demands on Technology. Analog, Digital and RF circuits form part of most modern systems and their coexistence on a single chip, presents a tough challenge to Chip Designers.

c) Prerequisite

VLSI Design

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I BASIC BUILDING BLOCKS

Sample and hold and trans-linear circuits. Performance of sample-and-hold circuits – testing sample and holds, MOS sample-and-hold basics. Basic building blocks – op-amps, capacitors, switches, non-overlapping clocks, Basic operation and analysis of switched capacitor circuits, resistor equivalence of a switched capacitor.

UNIT II FILTERS

First-Order Filters – switch sharing, fully differential filters, biquad filters, low-Q biquad filter, high-Q biquad filter, Charge injection, switched-capacitor gain circuits, parallel resistor-capacitor circuit, resettable gain circuit, capacitive-reset gain circuit, correlated double-sampling techniques.

UNIT III COMPARATOR

Comparator specifications – input offset and noise, hysteresis, Op-amp as a comparator – input- offset voltage errors, charge-injection errors, making charge-injection signal independent, minimizing errors due to charge-injection, speed of multi-stage comparators, Latched comparators.

UNIT IV DATA CONVERTER

Ideal D/A converter, ideal A/D converter, quantization noise, deterministic approach, stochastic approach, signed codes, performance limitations, resolution, offset and gain error, accuracy and linearity Nyquist rate digital-to-analog converters.(DAC). Decoder-based converters – resistor string converters, folded resistor-string converters, multiple resistor-string converters.

UNIT V PHASE LOCKED LOOP

Basic phase-locked loop architecture, voltage controlled oscillator, divider, phase detector, loop filer, the PLL in lock, Linearized small-signal analysis – second-order PLL model, limitations of the second-order small-signal model, Jitter and phase noise.

g) Course Content

UNIT I INTRODUCTION TO IC TECHNOLOGY

Brief History of Semiconductor technology, Silicon structure and properties, Czochralski Growth, Float Zone Growth, Characterization & evaluation of Crystals; Wafer Preparation-Silicon Shaping, Etching and Polishing, Chemical cleaning.

UNIT II DIFFUSION AND OXIDATION

Types of diffusion, Ficks laws, junction depth, Stopping mechanisms, Gaussian implantation profile, Variations to predicted distribution, Implantation damage and annealing, Oxidation growth mechanism, Structure of SiO2, Oxidation techniques and system, Oxide properties

UNIT III DEPOSITION AND EPITAXIAL GROWTH

Deposition requirements and techniques: Physical and Chemical Vapor deposition, Epitaxy-Vapour Phase Expitaxy, Defects in Epitaxial growth, Metal Organic Chemical Vapor Deposition, Molecular beam epitaxy.

UNIT IV PHOTOLITHOGRAPHY AND ETCHING

Introduction to photo/optical lithography, Contact/ proximity printers Projection printers, Mask generation, photo resists. Dry & Wet etching, methods for anisotropic etching, Plasma etching, Reaction ion etching (RIE)

UNIT V VLSI PROCESS INTEGRATION

Junction and Oxide Isolation, LOCOS methods, Trench Isolation, SOI; Metallization, Planarization. Fundamental consideration for IC Processing, NMOS IC Technology, CMOS IC Technology, Bipolar IC Technology

Program Elective

b) Preamble

This course provides the students to understand the VLSI testing mechanism, systems using existing test methodologies, equipment, and tools. This course also provides an indepth understanding of the testing of faults affecting VLSI circuits and a basic idea on fault tolerance after testing. The aim of this course is to introduce the concepts of algorithm development for automatic test pattern generation for digital circuit and to discuss fundamentals of design for testability.

c) Prerequisite

VLSI Design

d) Related Courses

Low Power VLSI

e) Course Outcomes

Upon the successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the basics of testing and fault modeling	K2
CO2	Classify various test generation methods for CMOS logic circuits.	K2
CO3	Interpret the testability methods for combinational & sequential CMOS circuits.	K2
CO4	Illustrate the BIST techniques for improving testability.	K2
CO5	Summarize the design strategies for memory test and fault diagnosis	K2

g) Course Content

UNIT – I TESTING AND FAULT MODELS

Importance of testing, Challenges, Levels of abstractions and Functional vs. Structural approach to testing-Complexity of the testing problem-Software testing-Modelling of Fault, Logical Fault - Fault detection - Fault location - Fault dominance - Test optimization and fault coverage.

UNIT – II TEST GENERATION

Digital Test Pattern Generation for logic circuits-Test generation for combinational logic circuits - Testable combinational logic circuit design - Test generation for sequential circuits - design of testable sequential circuits-IDDQ testing-The LFSRs and their use in random test generation and response compression.

UNIT – III DESIGN TESTABILITY

Testability analysis-Scan cell design-Scan architectures-Scan design rules-Scan design flow-Special purpose scan designs Logic and fault simulation-Adhoc and structured approaches to DFT-Various kinds of scan design-Fault models for PLAs-Bridging and delay faults and their tests-Memory Testing.

UNIT – IV TEST ALGORITHMS

Design rules-Logic BIST architectures Test compression - Pattern Generators-Estimation of test length-Test points to improve testability-Analysis of aliasing in linear compression-BIST methodologies-BIST for delay fault testing - Test algorithms - Test generation for Embedded RAMs.

UNIT-V MEMORY DESIGN TESTING AND FAULT DIAGNOSIS

Memory Fault Modeling-testing and Memory Design for Testability and Fault Tolerance RAM Fault Modeling-Electrical Testing-Peusdo Random Testing-Megabit DRAM Testing-Nonvolatile Memory Modeling and Testing-Application Specific Memory Testing-Fault models for diagnosis: Cause-effect diagnosis, Effect-cause diagnosis.

f) Correlation of COs with POs and PSOs

g) Course Content

UNIT I INTRODUCTION TO DSP SYSTEMS

Introduction to DSP systems – Typical DSP algorithms, Data flow and Dependence graphs – critical path, Loop bound, iteration bound, Algorithm for computing Iteration bound: Longest path matrix algorithm. Minimum cycle mean algorithm

UNIT II PIPELINING AND PARALLEL PROCESSING, RETIMING AND UNFOLDING 9

Introduction to pipelining and parallel processing. Pipelining of FIR digital filters, parallel Processing –Pipelining and parallel processing for Low power - Retiming – definitions and properties, Unfolding – an algorithm for unfolding, properties of unfolding, sample period reduction

UNIT III FAST CONVOLUTION

Introduction – Lagrange's Interpolation formula: Cook-Toom algorithm - modified Cook-Toom algorithm, Chinese Reminder Theorem: Winograd algorithm, Cooley Tukey algorithm - Cyclic Convolution - Iterated Convolution

UNIT IV ALGORITHMIC AND NUMERICAL STRENGTH REDUCTION IN FILTERS AND TRANSFORMS 9

Algorithmic strength reduction in filters-Parallel FIR filter and parallel fast FIR filter – Fast Fourier transforms - Discrete cosine transforms –Sub-expression Elimination, Sub-expression Sharing in Digital Filters.

9

UNIT V PIPELINIG, PARALLEL PROCESSING IN RECURSIVE AND ADAPTIVE FILTERS 9

Introduction – pipelined interleaving in digital filters –pipelining in 1st order IIR digital filters and higher order IIR digital filters –parallel processing for IIR filter - low power IIR filter design using pipelining and parallel processing

g) Course Content

UNIT I INTRODUCTION AND CMOS DEVICE MODELING

Introduction to Analog Design - Challenges in analog design- characteristics large signal model - small signal model- single stage Amplifier-Source follower, Noise in MOSFET

UNIT II ANALOG CMOS SUB CIRCUITS

MOS Diode active resistor, Capacitors and resistors, current sinks and sources, Current mirrors, Current and voltage References, Bandgap Reference

UNIT III CMOS SINGLE STAGE AMPLIFIERS

Common-Source stage (with resistive load, diode connected load, current-source load, triode load, source degeneration), common-gate stage, cascode stage, folded cascade stage. Frequency responses of CS stage, CD stage, CG stage, cascode stage

UNIT IV CMOS DIFFERENTIAL AMPLIFIER

Differential signaling, source coupled pair, Current source load, Common mode rejection ratio, CMOS Differential amplifier with current mirror load, Differential to single ended conversion.

UNIT V CMOS OPERATIONAL AMPLIFIER

Design of CMOS Op Amps, Compensation of Op Amps, Design Of two stage Op Amps, Power-supply Rejection Ratio of Two stage Op Amps, Cascode Op Amps.

g) Course Content

Theory

Historical perspective and future trends in CMOS VLSI Circuits and system design, Overview of Physical Design flow, physical design requirements for VLSI: technology; chip performance and cost; technology updateability; reliability.

Physical design methodologies: algorithms in logic partitioning placement and routing interconnection parasitics and delays, Modeling and extraction of circuit parameters from physical layout.

Goals of CTS ,Types of Clock-tree, CTS Specification, Building clock tree, analyse the results, Fine-tuning the Clock-tree and Guidelines for best CTS results.

ECO Flow, Types of ECO, Timing & Functional ECO prep, rolling in the ECO, Performing the ECO placement and routing.

Sign-off Checks: Physical Verification(DRC,LVS,ERC), IR drop analysis, Electro-Migration Analysis, Cross-Talk (SI) analysis, Sign-off Timing analysis, Logical Equivalence checking.

15 Hrs

h) List of experiments

S. No	CO Mapping	Practical Exercises(60 Hours)
1.	CO2	Introduction to Cadence Tools viz. Schematic and Layout Design
2.	CO2	Work Space Creation & Writing RTL Code for CMOS Inverter
3.	CO2	Semi-Custom Design of CMOS Inverter using the INCISIVE Simulator and GENUS Tool
4.	CO3	Work Space Creation & Writing RTL code and Design Simulation of CMOS AND/OR GATE
5.	CO3	Pre-Layout and Post Synthesis simulation of CMOS NAND/NOR/XOR GATE using GENUS Tool
6.	CO3	Analysis of power, area and timing by performing pre layout and post layout simulation using Cadence
7.	CO4	Design Simulation of SR/JK Flip Flop using the INCISIVE Simulator
8.	CO4	Design Synthesis of SR/JK Flip Flop using the GENUS Tool
9.	CO4	Physical Design/Automatic Layout Generation of 4 –bit Synchronous Counter
10.	CO4	Full-custom Design of a CMOS Inverting Amplifier
11.	CO5	Design and Simulate the Common Source Amplifier using analog simulator Spectre
12.	CO5	Design and Simulate the Common Gate Amplifier/ Common Drain Amplifiers
13.	CO5	Design and Simulate the Differential Amplifier
14.	CO5	Mini Project using Cadence

Course Code	Course Title	L	Т	Р	С
10212EC221	RECONFIGURABLE COMPUTING WITH FPGA	1	0	4	3

Program Elective

b) Preamble

Recent advances in VLSI technology have given upswing to a fresh class of computer architectures which take advantage of application-level parallelism. These reconfigurable computers can be quickly customized at the hardware level to perform exactly the computation required in hardware, overcoming the fixed hardware configurations found in many contemporary microprocessors. In this course, students will understand the state- of the-art in reconfigurable computing both from a hardware and software perspective.

c) Prerequisite

VLSI Design

g) Course Content

Theory

15 Hours

Reconfigurable Computing: Reconfigurable Computing Systems, Evolution and Characteristics, Advantages and Issues, Fundamental Concepts and Design Steps, Domain Specific Processors and Application Specific Processors.

Reconfigurable Architectures: Classification of Reconfigurable Architectures, FPGA Technology and Architectures, LUT devices and Mapping, Placement and Partitioning.

Interconnections in Reconfigurable Architectures: Routing and Switching concepts.

Programming Technology: HDL Based Programming and High level Synthesis using C, Partial Reconfiguration.

Intellectual Property Based Design: Soft core, Firm core and Hard Core, Software tools.

S. No	CO Mapping	Practical Exercises (60 Hours)
1.	CO1	Introduction to Software and Hardware Tools
2.	CO1	Design of VLSI Subsystems using Verilog HDL.
3.	CO1	Implementation of an Arithmetic and Logical Unit on FPGA.
4.	CO1	Design of Finite State Machine using Verilog HDL.
5.	CO2	Implementation and Analysis of VLSI Subsystems in FPGAs.

h) List of experiments

6.	CO2	Implementation of Filters.
7.	CO2	Interfacing GPIOs and PMODs with FPGA.
8.	CO2	Signal Generation and AD-DA Interfaces.
9.	CO2	Implementation of IP Cores in FPGA.
10.	CO2	Interfacing Sensors and Display Devices with FPGA.
11.	CO3	Study and Implementation of Micro blaze processor.
12.	CO3	Study and Implementation of Zynq Processing system.
13.	CO3	Design and Implementation of an Embedded System in FPGA.
14.	CO3	Image Processing using FPGA
15.	CO3	Interfacing GPS receiver, MEMS microphone, Pcam 5C: 5MP Fixed Focus Color Camera with FPGA.
16.	CO3	Mini Project using PMOD

Total: 75 Hrs.

g) Course Content

UNIT I COMMUNICATION SYSTEM SECURITY

Physical Layer Security: Shannon's Perfect Secrecy-Wyner's Wiretap Channel-Wiretap Codes for Achievable Secrecy Using Parity Check Codes-Wiretap Codes for Achievable Secrecy Using Linear Codes. Spread-Spectrum Techniques for Anti-Jamming Attacks: Jamming Attacks-Code Division Multiple Access (CDMA) and Jamming Capacity-Bloom Filters and Channel Schemes.

UNIT II SYMMETRIC CIPHERS

Introduction on Security-Security Goals-OSI Security Architecture-Security Attacks-Security Services- Security Mechanisms- Substitution ciphers & its types- Transposition ciphers & its types.

UNIT III ASYMMETRIC CIPHERS

Number theory- Prime Number, testing of Primality, Chinese remainder theorem, Quadratic congruence. Principles of Public-Key Cryptosystems, RSA Algorithm, Diffie-Hellman Key Exchange, ElGamal Cryptosystem, Elliptic Curve Cryptography.

UNIT IV DATA INTEGRITY

Message Integrity & Message Authentication - Message Authentication Code (MAC)-Cryptographic Hash Functions- SHA-512 Digital Signatures- ElGamal and Schnorr Digital Signature Scheme- Digital Signature Standards.

UNIT V NETWORK AND INTERNET SECURITY

Transport Level Security: Web Security Issues- Transport Layer Security- HTTPS- Wireless Network Security: IEEE 802.11i Wireless LAN Security- Wireless Transport Layer Security-WAP End-to-End Security- Application Layer Security: PGP- S/MIME- IP Security- IP Security overview- IP Security Policy.

g) Course Content

UNIT I VEHICULAR COMMUNICATION

Vehicular Communication Principles, Vehicle-to-X (V2X) Communication for Intelligent Transportation Systems, V2X communication regimes, Standards and Technologies – layered architecture – Infrastructure-based vs. infrastructure-less technologies – Long-Term Evolution, Dedicated Short Range Communication (DSRC), Wireless Access in Vehicular Environments (WAVE).

UNIT II WIRELESS CHANNEL CHARACTERISTICS

Fading: Path loss, shadowing, small-scale fading, delay spread and doppler spread, coherence bandwidth and coherence time, techniques for combating wireless channel impairments, Physical Layer: digital modulation schemes in DSRC, design of OFDM in DSRC (symbol time, sub-carrier spacing, pilot spacing), Medium Access Control (MAC): 802.11p EDCA, multi-channel operation in the WAVE MAC.

UNIT III VEHICULAR NETWORKS

Review of Vehicular Networks - Cross-System Functions, Requirements for Bus Systems, Classification of Bus Systems, Application of Vehicle, Coupling of Networks, Examples of Networked Vehicles.

UNIT IV BUS SYSTEM

CANFD Protocol: Overview of CANFD bus architecture – Physical Layer – Topology – frame architecture – CAN vs CANFD – Bit stuffing and CRC – Delay compensation – Error Handling – LIN Protocol: Frame Format – Bus Timing – Topology – Error detection – Sleep/Wake-up modes – Advanced Frames – MOST Protocol: Physical Layer – Network and Fault Management – Diagnostics – Interface Controller – Applications.

9

9

9

UNIT V SAFETY APPLICATION AND MOBILITY MODELLING

Safety and non-safety applications, Vehicular Network Simulation – bidirectionally coupled road traffic and communication network simulators for vehicular network simulation – mobility models – Random models, flow and traffic models, behavioral models, trace and survey-based models, joint transport and communication simulations

g) Course Content

UNIT I SENSORS AND WEARABLE TECHNOLOGY

General concepts and terminology of Sensor Systems-Transducers classification-sensors and actuators-General input-output configurations-Static and dynamic characteristics of measurement system-Motivation for development of Wearable Devices –

Sensors for wearable systems-Inertia movement sensors - Respiration activity sensor - Inductive Plethysmography-Impedance plethysmography- pneumography- Wearable ground reaction force sensor- GSR- Radiant thermal sensor- Wearable motion sensors.

UNIT II RESISTIVE AND REACTIVE SENSORS

Resistive Sensors-Potentiometers-strain gages (piezo-resistive effect)- resistive temperature detectors (RTD)-Reactive Sensors - variable reluctance sensors - Hall effect - Eddy current sensors - Linear variable differential transformers (LVDT)-variable transformers-Self-generating Sensors - Mechanical Transducers-Smart Sensors.

UNIT III SELF GENERATING SENSORS AND SMART SENSORS

Thermoelectric sensors-piezoelectric sensors-pyroelectric sensors-photovoltaic sensorselectrochemical sensors - IEEE 1451 standard & Transducer Electronic Datasheets (TEDs)-Overview of various smart sensors- Digital temperature sensor (DS1621, TMP36GZ)-Humidity sensor (DHT11, DHT22, FC28)- IR sensor (FC51).

UNIT IV EMERGENCE OF WEARABLE DEVICES

The emergence of wearable computing and wearable electronics- Types of wearable sensors: Invasive- Non-invasive- Intelligent clothing- Industry sectors' overview – sports - healthcare-Fashion and entertainment- military- environment monitoring-mining industry- public sector and safety.

9

9

9

UNIT V APPLICATIONS OF WEARABLE SYSTEMS

Cameras in wearable devices- Applications in safety and security- navigation- Enhancing sports media- Automatic digital diary- Wearable devices with Global Positioning System (GPS) - integration for tracking and navigation. The Meta Wearables – Textiles and clothing- Social Aspects: Interpretation of Aesthetics- Adoption of Innovation-On-Body Interaction- Medical Diagnostics- Medical Monitoring-Patients with chronic disease- Hospital patients- Elderly patients- Multi parameter monitoring.

g) Course Content

UNIT I STRUCTURAL HEALTH MONITORING

Need of Structural Health Monitoring: Definition & Concept of SHM, SHM & Biomimetic Comparison of SHM with NDT, Types - Components of SHM - Procedure of SHM - Objectives & Operational Evaluations of SHM - Advantages of SHM

UNIT II SENSOR TECHNOLOGY

Sensors, Transducers & Actuators for SHM, Classification of Sensors, and Characteristics & Working, Principles of Various types of Sensors, Piezoelectric wafer active sensors Elastic waves in solid structures - Concept of Smart Materials & Smart Structures with SHM: Piezoelectric, Shape Memory Alloys, ER & MR Fluids.

UNIT III FEATURE EXTRACTION METHODS

Data Acquisition Systems: Types, Data acquisition and cleansing procedures, Hardware & its Components, Identifying damage sensitive properties - signal processing: Fourier and short-term Fourier transform, wavelet analysis.

UNIT IV PATTERN RECOGNITION

State-of-Art damage identification and pattern recognition methods, Neural Network Approach: Ideas of neural networks, Neural networks in damage detection, localization and quantification, Multi-layer Perceptron (MLP), Feature Extraction Algorithms.

UNIT V FLAW DETECTION

SHM based flaw detection in mechanical structures- Integrity and damage recognition in plates and pipes, defect identification in weld joints, Wear monitoring in cutting tools

g) Course Content

UNIT I EVOLUTION OF IOT

Review of computer communication concepts: OSI layers, components- packet communication-Networks- TCP-IP, IPv4 addressing, IPv6 addressing - IoT architecture reference layer-Characteristics of IoT sensor nodes - Edge computing - cloud and peripheral cloud - single board computers - Open-source hardware - Examples of IoT infrastructure.

UNIT II IOT PROTOCOLS AND ITS APPLICATIONS

UDP- MQTT brokers, publisher, subscriber models- HTTP- COAP -XMPP and gateway protocols - IoT Communication Pattern - IoT protocol Architecture - Selection of Wireless technologies : 6LoWPAN, Zigbee, WIFI, BT, BLE, SIG, NFC, LORA, LiFi, WiDi- IoT for smart cities , health care, agriculture - Smart meters- M2M- Web of things- Cellular IoT-Industrial IoT- Industry 4.0 -IoT standards.

UNIT III AUTOMOTIVE SYSTEMS

Power-train - Combustion Engines, Transmission - Differential Gear, Braking Systems - Introduction to Modern Automotive Systems and need for electronics in Automobiles - Application areas of electronics in the automobiles - Possibilities and challenges in the automotive industry- Enabling technologies and Industry trends.

UNIT IV SENSORS IN AUTOMOTIVE SYSTEMS

Lambda sensors- Exhaust temperature sensor- NOx sensor- PM sensor- Fuel quality sensor-Level sensor- Torque sensor- Speed sensor- Mass flow sensor- Manifold pressure sensor- Wheel speed sensors/direction sensors - Steering position sensor (multi turn)- Acceleration sensor (inertia measurement), Brake pneumatic pressure sensor, ABS sensor, Electronic stability sensor.

9

Dr.A. Selwin Mich Priyadharson Head of the Department Bectronics & Communication Engineeries

Course Code	Course Title	L	Т	Р	С
10212EC166	M2M COMMUNICATION WITH IoT AND LTE	3	0	0	3

Minor Elective

b) Preamble

The primary aim of this course is to understand the fundamental requirements and challenges of machine-to-machine (M2M) communication and the integration of such technologies into existing infrastructure with the implementation of internet of things (IoT) and long-term evolution (LTE) technologies.

c) Prerequisite

Nil

d) Related Courses

IoT in Automotive systems

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Discuss the fundamentals of M2M communication, its building blocks, and their characteristics.	K2
CO2	Explain the optimization principles and security constraints in M2M communication.	K2
CO3	Illustrate the internet of things fundamentals and its role in M2M communication.	K2
CO4	Infer the role of LTE in M2M communication	K2
CO5	Identify the various applications of M2M communication in industry and real-life scenarios.	K2

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO4	Н	L	М	L	L	М		-	-	L	-	L	L	-
CO5	М	L	М	L	L	Н	L	-	L	L	L	М	М	-

g) Course Content

UNIT I M2M COMMUNICATION

Machine to Machine Communication, M2M Standards, Architecture of M2M, High-Level System Architecture, ETSI M2M Service Capabilities, REST Architectural Style for M2M, Resource Based M2M Communication and Procedures, M2M Over a Telecommunications Network.

UNIT II M2M OPTIMIZATION AND SECURITY

M2M communication scenarios, Data connections for M2M Applications, 3GPP Standardization of Network Improvements for Machine Type Communications, M2M Value-Added Services, IPv6 for M2M, Security Characteristics of Cellular M2M, Standardization efforts on securing M2M and MTC Communication.

UNIT III INTERNET-OF-THINGS (IoT) FOR M2M

M2M towards IoT: General technology and scientific trends, M2M-IoT value chains, An emerging industrial structure for IoT, M2M to IoT – An architectural overview, M2M and IoT analytics – IoT reference model, Information model, Functional model, Communication model.

UNIT IV LONG TERM EVOLUTION (LTE) FOR M2M 9

M2M enhancements for LTE Networks, M2M over LTE: LTE-M, LTE-M Categories, LTE-A Pro: Requirements and implementation, Case study: LTE-A radio planning for Sensor devices deployment.

9

9

UNIT V M2M APPLICATIONS

Applications in Various Sectors: Automotive, Smart Telemetry, Smart cities, Healthcare, Safety and Surveillance, Agriculture, Supply Chain, M2M Industrial Automation – Case studies: Industrial automation, Agriculture, Healthcare.

Total: 45 Hrs

g) Course Content:

UNIT I: ELECTRICAL AND ELECTRONIC SYSTEMS IN THE VEHICLE 9

Motronic-engine management System, Electronic diesel control (EDC), Lighting technology, Electronic stability program (ESP), Sensors – measuring principles, sensor types. Actuators- working principles, types, Automotive networking.

UNIT II: CIRCUIT FUNDAMENTALS AND BASIC TEST EQUIPMENTS

Circuit fundamentals and basic test equipment: voltage, current, resistance, circuits components, series and parallel circuits, purpose of voltmeters, measuring voltage drop, connecting the voltmeter, types of ammeters, current probes, reading and interpreting ohmmeter readings, continuity testing. Vehicle circuits: circuit components, analyzing series and parallel circuits, control circuits, diagnosing open and short circuits.

UNIT III: ELECTRONIC FUNDAMENTALS

Solid state devices, electronic control input devices, diagnosing and servicing electronic control input devices, integrated circuits as input devices, diagnosing and servicing ICs, oxygen sensors, diagnosing and servicing oxygen sensors. Digital Storage Oscilloscope: voltage and time setting, DSO trigger and slope, using a current probe with DSO, using the DSO"s multiple-trace capability.

UNIT IV: DIGITAL INSTRUMENTS AND MEASUREMENTS

Basic concept of Digital measurement in automobiles, Types of errors, standards, Device under calibration, calibration techniques, Analysis of measurement data, Instrumentation systems using sensors, Data acquisition systems using digital methods including PC based systems

9

9

UNIT V: COMPUTER AND MICROPROCESSORSIN AUTOMOBILE SYSTEMS 9

Computer and Microprocessors, Microprocessor and Microcomputer controlled devices in automobiles, Architecture of an ECU, Electronic engine control: Input, output devices, electronic fuel control system, engine control operating modes, Electronic ignition systems, and Spark advance correction schemes

Total: 45 Hrs

g) Course Content

UNIT I FUNDAMENTALS OF EMBEDDED SYSTEMS

Embedded system definition, classification of embedded system, embedded system design process, reset circuits.

UNIT II MICROCONTROLLER

Difference between microprocessor and microcontroller, Overview of the architecture of 8051 microcontroller, Memory organization, and special function registers, Addressing Modes, Instruction formats, Instruction set, Interrupt and Interrupt routines, I/O Ports, Assembly Language programming.

UNIT IIIINTERFACING PERIPHERALS USING EMBEDDED C

Embedded C Programming structure, logical operations, IO programming, delay programming, timer and counter programming, serial port programming, LCD interfacing, and keypad interfacing.

UNIT IV

8

COMMUNICATION PROTOCOL

Communication Basics, Serial communication protocols: UART, RS232, RS485, SPI, USB, Introduction to I2C and CAN.

UNIT V APPLICATIONS

Smart Agriculture System, Intelligent Transportation Systems Autonomous Drone Navigation System.

g) Course Content

UNIT I FUNDAMENTALS OF MEASUREMENT SYSTEMS

Basics of Measurement – Classification of errors – Error analysis – Static and dynamic characteristics of transducers – Performance measures of sensors – Classification of sensors – Sensor calibration techniques – Sensor Output Signal Types.

UNIT II MOTION, PROXIMITY AND RANGING SENSORS

Motion Sensors – Potentiometers, Resolver, Encoders – Optical, Magnetic, Inductive, Capacitive, LVDT – RVDT – Synchro – Microsyn, Accelerometer, Range Sensors – RF beacons, Ultrasonic Ranging, Reflective beacons, Laser Range Sensor (LIDAR).

UNIT III FORCE, MAGNETIC AND HEADING SENSORS

Strain Gage, Load Cell, Magnetic Sensors –types, principle, requirement and advantages: Magneto resistive – Hall Effect – Current sensor Heading Sensors – Compass, Gyroscope, Inclinometers.

UNIT IV OPTICAL, PRESSURE AND TEMPERATURE SENSORS

Photo conductive cell, photo voltaic, Photo resistive, Fiber optic sensors – Pressure – Diaphragm, Bellows, Piezoelectric – Tactile sensors, Temperature – IC, Thermistor, RTD, Thermocouple. Acoustic Sensors – flow and level measurement, Radiation Sensors – Smart Sensors – Film sensor, MEMS & Nano Sensors, LASER sensors.

9

9

9

UNIT V ADVANCED TRANSDUCERS

Energy harvesting transducers– Hall Effect transducer – Magneto resistor -Digital displacement transducer– Fiber optic sensor - Introduction to SQUID sensor, Hyper spectral sensor, Touch screen sensor, Smart Transducer.

UNIT I INTRODUCTION TO EMBEDDED SYSTEMS SECURITY

Security – Embedded systems – Embedded security trends – Security policies – Security threats – Multiple independent levels of security – Core embedded OS security requirements.

UNIT II SECURE EMBEDDED SOFTWARE DEVELOPMENT

Principles of High-Assurance Software Engineering – Minimal Implementation – Component Architecture: Runtime Componentization - Secure Development Process: Change Management, Development Tool Security, Secure Coding, Software Testing and Verification.

UNIT III EMBEDDED CRYPTOGRAPHY

Introduction – Cryptographic Modes – Block Ciphers – Authenticated Encryption – Public Key Cryptography – Key Agreement – Public Key Authentication – Cryptographic Hashes – Message Authentication codes – Key Management for Embedded Systems.

UNIT IV DATA PROTECTION PROTOCOLS FOR EMBEDDED SYSTEMS 9

Introduction –Generalized Model – Choosing the Network layer for Security – Ethernet Security Protocols – IPsec – SSL/TLS – Embedded VPN Clients – DTLS – SSH – Custom Network Security Protocols – Application of Cryptography within Network Security Protocols.

UNIT V EMBEDDED SECURITY APPLICATIONS

Embedded Network Transactions – Automotive Security – Secure Android – Next-Generation Software – Defined Radio.

b) Preamble

This course provides the basic understanding of measurement and instrumentation systems and the insight of the resistive sensors and its applications in real life. This course also introduces the concept of classification of sensors such as reactive sensors and self-generating sensors and its applications in real life. It makes the students to get familiar with the characteristics, working principle and application of special purpose transducers. The course impart the importance of smart sensors, sensor interface standards for wearable device applications and to provide a brief overview of the wearable technology and its impact on social life.

g) Course Content

UNIT I INTRODUCTION TO MEASUREMENTS

Functional Elements of a Measurement System and Instruments, Applications and Classification of Instruments, Types of measured Quantities, General concepts and terminology of Sensor systems, Transducers classification-sensors and actuators, General input-output configurations, Static and dynamic characteristics of measurement system.

UNIT II RESISTIVE SENSORS

Resistive sensors- Potentiometers, strain gages (piezo-resistive effect), resistive temperature detectors (RTD), thermistors, magneto resistors, light dependent resistor (LDR), resistive gas sensors. Wearable applications: Strain sensor for monitoring Physiological signals, body movement.

UNIT III REACTIVE SENSORS

Inductive sensors - variable reluctance sensors, Hall effect, Eddy current sensors, Linear variable differential transformers (LVDT), variable transformers, magneto-elastic, magneto-resistive, and magnetostrictive sensors. Capacitive sensors- variable capacitor, differential capacitor. Wearable applications: Body/textile antennas for wireless data transmission.

UNIT IV SELF GENERATING SENSORS

Thermoelectric sensors, piezoelectric sensors, pyro electric sensors, photovoltaic sensors, electrochemical sensors, Wearable applications: temperature sensitive fabric, electrochemical sensors.

UNIT V SCOPE OF WEARABLE DEVICES

Role of Wearable, Challenges and Opportunities, Attributes of Wearable, The Meta Wearable – Textiles and clothing, Social Aspects: Interpretation of Aesthetics, Adoption of Innovation, On-Body Interaction; Case Study: Google Glass, health monitoring.

g) Course Content

UNIT IFUNDAMENTALS OF PRODUCT DEVELOPMENT9Analysis and Product decision -Social Trends - Technical Trends - Economic Trends -
Environmental Trends-Political/ Policy Trends- Introduction to Product Development
Methodologies and Management Overview of Products and Services- Types of Product
Development-Overview of Product Development Methodologies-Product Life Cycle -Product
Development Planning and Management

UNIT II REQUIREMENTS AND SYSTEM DESIGN

Types of Requirements - Requirement Engineering : Traceability Matrix and Analysis-Requirement Management-System. Design & Modeling-Introduction to System Modeling-System Optimization- System Specification- Sub-System Design -Interface Design

UNIT III DESIGN AND TESTING

Conceptualization - Industrial Design and User Interface Design - Introduction to Concept generation Techniques –Challenges in Integration of Engineering Disciplines - Concept Screening & Evaluation - Detailed Design- Component Design and Verification– Mechanical, Electronics Software Subsystems - High Level Design/ Low Level Design of S/W Program -Types of Prototypes, S/W Testing- Hardware Schematic, Component design, Layout and Hardware Testing – Prototyping - Introduction to Rapid Prototyping and Rapid Manufacturing-System Integration, Testing, Certification and Documentation

UNIT IV SUSTENANCE ENGINEERING AND END-OF-LIFE (EOL) SUPPORT 9 Introduction to Product Verification Processes Stages- Introduction to Product validation processes and stages-Product Testing standards and Certification- Product Documentation-

9

Sustenance- Maintenance and Repair- Enhancements- Product EoL- Obsolescence Management- Configuration Management- EoL Disposal.

UNIT V BUSINESS DYNAMICS ENGINEERING SERVICES INDUSTRY 9

The Industry - Engineering Services Industry - Product development in Industry versus Academia - The IPD Essentials- Introduction to vertical specific product development processes - Manufacturing/ Purchase and Assembly of Systems- Integration Mechanical, Embedded and S/W systems – Product development Trade-offs - Intellectual Property Rights and Confidentiality - Security and configuration management.

f) Course Content

UNIT I FUNDAMENTALS OF EMBEDDED IoT

Introduction to Internet of Things (IoT)– Functional Characteristics – Recent Trends in the Adoption of IoT – Societal Benefits of IoT, - IoT Enabling Technologies-IoT and M2M.

UNIT II IOT ARCHITECTURE

M2M high-level ETSI architecture - IETF architecture for IoT - OGC architecture - IoT reference model - Domain model - information model - functional model - communication model - IoT reference architecture.

UNIT III PHYISCAL DEVICES

Ardiuno architecture, instruction set, input and output ports, interrupts, peripherals programming and board configuration, overview of ESP8266. Raspberry Pi 3: Architecture, instruction set, input and output ports, interrupts, peripherals programming, and board configuration

UNIT IV IoT PROTOCOLS

Protocol Standardization for IoT – Efforts – M2M and WSN Protocols – SCADA and RFID Protocols – Unified Data Standards – Protocols – IEEE 802.15.4 – BACNet Protocol – Modbus–Zigbee Architecture – Network layer – 6LowPAN - CoAP - Security.

UNIT V SECURITY & CLOUD ANALYTICS

IEEE 802.11 Wireless Networks Attacks: Basic Types, WEP Key Recovery Attacks, Keystream Recovery Attacks against WEP – Security Issues in ZigBEE: Eavesdropping Attacks, Encryption Attacks – Evolution of Cloud Computation, Commercial clouds and their features, open source IoT platforms, cloud dashboards, Big data analytics and Hadoop. Interfacing.

LIST OF EXPERIMENTS (20 Hours)

S.No	Name of the Experiment	CO
1	Arduino & Raspberry pi installation.	CO1
2	Blinking LED through Raspberry pi or Arduino.	CO2
3	IoT sensors interface with Raspberry pi or Arduino or nodeMCU (Temperature/Light sensors).	CO2
4	Integration of Actuators with Raspberry pi or Arduino (Servo motor/Relay).	CO2
5	Capture Image with Raspberry pi or Arduino.	CO2
6	Design Traffic control system: using Raspberry pi or Arduino.	CO2
7	IoT Networking: Connectivity technologies, Protocols and Interoperability in IoT.	CO3
8	Design Temperature dependent auto cooling system: Using Raspberry pi or Arduino.	CO3
9	IoT applications in home automation: Implementing IoT home application using Raspberry pi or Arduino.	CO4
10	Case study: Emergence of IoT Healthcare through Cloud Computing.	CO5

LIST OF PROJECTS (10 Hours)

- 1. IoT Based Humidity and Temperature Monitoring Using Arduino Uno
- 2. IoT Weather Reporting system using Raspberry pi.
- 3. IoT Connected Healthcare Applications.
- 4. IoT Based Intelligent Traffic Management System
- 5. IoT Based Smart Parking System Using RFID
- 6. Smart Irrigation System Using IoT.
- 7. Waste and water management using IoT
- 8. Smart Healthcare Solution using IoT
- 9. Automatic Herbicides Sprayers
- 10. Fish Feeder
- 11. Green Corridor
- 12. Trusted high-quality elderly care
- 13. Gesture controlled Iot Application

Course Content g)

UNIT I FUNDAMENTALS OF CELLULAR SYSTEM

Evolution of mobile radio communication – Cellular system: hexagonal geometry cell and concept of frequency reuse, channel assignment strategies, distance to frequency reuse ratio, channel and co-channel interference, handoff strategies – umbrella cell concept.

UNIT II RADIO WAVE PROPAGATION MODELS

Block diagram of wireless communication – large scale path loss – path loss models: free space and tworay models – small scale fading – flat fading – frequency selective fading – fading due to doppler spread – fast fading – slow fading.

UNIT III MULTIPLE ACCESS TECHNIQUES

Contention-free multiple access schemes: Frequency Division Multiple Access (FDMA), Time Division Multiple Access (TDMA), Code Division Multiple Access (CDMA), Space Division Multiple Access (SDMA) – contention-based multiple access schemes: ALOHA and Carrier Sense Multiple Access (CSMA).

UNIT IV WIRELESS STANDARDS

Global System for Mobile Communication (GSM) - Interim Standard 95 (IS-95) - General Packet Radio Service (GPRS) - Universal Mobile Telecommunications System (UMTS) - Wireless Local Area Network (WLAN).

UNIT V APPLICATIONS OF WIRELESS COMMUNICATION

Bluetooth - ZigBee - Wi - Fi- Long Term Evolution (LTE) - Overview of Internet of Things (IoT) smart grids - health care - smart cities - smart agriculture.

g) Course Content

UNIT I FUNDAMENTALS OF 5G ARCHITECTURE

5G spectrum landscape and requirements – spectrum access modes and sharing scenario – 5G spectrum technologies – 5G services and performance metrics – 5G network architecture.

UNIT II RADIO-ACCESS TECHNOLOGIES

Radio resource and interference management – traffic offloading scenarios for networks – access design principles for multi-user communications: radio access for dense deployments, OFDM numerology for small-cell deployments, small-cell sub-frame structure.

UNIT III MIMO TECHNOLOGY

MIMO challenges: channel modeling, channel estimation and beam-forming – types of transceivers, merits and demerits – massive MIMO (Sub 6 GHz).

UNIT IV NON-ORTHOGONAL MULTIPLE ACCESS

NOMA types: Power domain NOMA, code domain NOMA, cooperative NOMA and hybrid NOMA –difference between orthogonal multiple accesses and NOMA.

UNIT V APPLICATIONS OF 5G

Robotic surgery – driverless car – industry-specific networks – home networks – space-air-ground networks – tactile internet – augmented reality and virtual reality.

g) Course Content

UNIT I FUNDAMENTALS OF 5G NEW RADIO

5G characteristics and requirements – NR frame numerology – NR carrier aggregation – RAN architectures – 5G core network functions and services.

UNIT II NEW RADIO INTERFACE

High-frequency operation and spectrum flexibility, scheduling and data transmission, quality-ofservice handling – radio protocol architecture: user-plane protocols, control-plane protocols.

UNIT III WAVEFORMS AND CHANNEL MODELS

5G radio access technologies: design principles – multi-carrier with filtering – radio access for dense deployments, V2X communication – METIS channel models.

UNIT IV MULTI-ANTENNA TRANSMISSION IN 5G NR

Uplink and downlink multi-antenna precoding – codebook-based transmission – non-codebook-based precoding – beam management.

UNIT V APPLICATIONS OF 5G NEW RADIO

Autonomous vehicles: smart traffic regulation – health sector – physical location tracking of lifesaving equipment – smart cities: secure and controlled internet access for residents – industry.

g) Course Content

UNIT I CHARACTERISTICS AND MODEL

Millimeter wave characteristics - millimeter wave wireless - implementation challenges, design considerations, radio wave propagation for mm wave - outdoor and indoor channel models.

UNIT II DEVICES AND CIRCUITS

Millimeter wave generation and amplification: peniotrons, ubitrons, gyrotrons – free electron lasers – HEMT-models for mm wave transistors.

UNIT III COMMUNICATION SYSTEM

Modulations for millimeter wave communications: ON-OFF Keying, phase shift keying, frequency shift keying, quadrature amplitude modulation, orthogonal frequency-division multiplexing.

UNIT IV MIMO SYSTEM

Massive MIMO communications – spatial diversity of antenna arrays – multiple antennas – multiple transceivers – spatial, temporal and frequency diversity.

UNIT V APPLICATIONS OF MM WAVE TECHNOLOGY

Device to Device communications over 5G systems – mm wave for 5G mobiles and gyrotron technologies – optical technique of millimeter wave generation.

Program Elective

b) Preamble

The advent of 5G networks marks a major advancement in wireless communication, offering unprecedented speed, capacity, and latency improvements. This fifth generation of mobile networks is set to transform sectors like healthcare, transportation, and entertainment.

c) Prerequisite

Nil

d) Related Courses

5G Technology, 6G Mobile Networks.

e) Course Outcomes

On the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Outline the features, architecture and components of 5G networks.	K2
CO2	Illustrate the 5G network infrastructure and its role in smart cities development.	K2
CO3	Explain the influence of 5G on connected and autonomous transportation system.	K2
CO4	Interpret smart manufacturing and predictive maintenance over industry 4.0.	K2
CO5	Infer the security, privacy issues and future trends in 5G network services and its applications.	K2

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

CO5	Н	L	L	L	-	-	-	-	L	L	L	L	-	-

g) Course Content

UNIT I FUNDAMENTALS OF 5G

Evolution of wireless communication evolution – Key features of 5G networks: speed, latency, capacity, and reliability – 5G architecture and components: small cells, macro cells, and beamforming – spectrum and frequency bands for 5G.

UNIT II 5G NETWORK INFRASTRUCTURE

Mobility Massive MIMO (Multiple Input Multiple Output)-Network slicing and virtualization – Edge computing and its relevance to 5G – Role of 5G in smart city development – Applications in traffic management and autonomous vehicles – 5G-enabled infrastructure monitoring and maintenance.

UNIT III 5G IN TRANSPORTATION SYSTEM

Impact of 5G on connected and autonomous vehicles – Vehicle-to-everything (V2X) communication – 5G applications in railways and public transportation – Safety and security considerations.

UNIT IV 5G IN MANUFACTURING AND INDUSTRY 4.0

Manufacturing and Industry 4.0: Overview of Industry 4.0 and smart manufacturing – Role in industrial automation and robotics – 5G-enabled predictive maintenance and IoT – Case studies of 5G in manufacturing.

UNIT V CHALLENGES AND FUTURE TRENDS

Security and privacy issues in 5G networks – Regulatory and standardization aspects – Future trends in 5G and beyond (6G, etc.) – 5G applications in real-time data collection and analysis.

Course Content g)

UNIT I FUNDAMENTALS OF MIMO CHANNEL MODELS

Diversity - multiplexing trade-off, transmit diversity schemes of MIMO systems, fading channel models: uncorrelated - fully correlated - separately correlated - keyhole MIMO fading models, parallel decomposition of MIMO channel.

MIMO AND FADING CHANNEL MODELS **UNIT II**

Capacity for deterministic and random MIMO channels – capacity of independent identically distributed channels – capacity of separately correlated rayleigh fading MIMO channels.

UNIT III **SPACE-TIME CODES**

Code design criteria – alamouti space-time codes – SER analysis of alamouti space-time code over fading channels - space-time block codes - space-time trellis codes - performance analysis of spacetime codes.

UNIT IV MIMO DETECTION TECHNIQUES

Maximum likelihood – zero forcing-minimum mean square error-zero forcing equalization with successive interference cancellation - minimum mean square error successive interference cancellation.

UNIT V **ADVANCES IN MIMO**

Spatial modulation - MIMO based cooperative communication and cognitive radio - multiuser MIMO-MIMO systems for 5G wireless - MIMO applications in RADAR and satellite communication.

g) Course Content

UNIT I FUNDAMENTALS OF CYBERSECURITY

Basic concepts in cybersecurity: confidentiality, integrity, availability, threats, vulnerabilities, and risks – cryptography – symmetric and asymmetric encryption – key management – network security – firewalls – VPN – IDS/IPS.

UNIT II SECURITY PROTOCOLS AND STANDARDS

3GPP security specifications – authentication and key agreement (aka) – secure access to the network, network slicing security – isolation of network slices – security considerations for network slicing – transport layer security – secure communication channels – use of TLS in 5G.

UNIT III 5G SECURITY CHALLENGES

Threat landscape – potential attack vectors in 5G – impact of 5G on traditional security models – privacy concerns – data privacy issues in 5G networks – regulatory requirements – GDPR-CCPA.

UNIT IV THREAT DETECTION AND MITIGATION IN 5G NETWORKS

Intrusion detection systems (IDS) – types of IDS – IDS in 5G networks – anomaly detection techniques for detecting anomalies – machine learning approaches in anomaly detection-incident response – steps in incident response – tools and techniques for incident management.

UNIT V SECURITY IN 5G APPLICATIONS

IoT security – security challenges in IoT within 5G – best practices for securing IoT devices. mobile edge computing (MEC) security – security challenges and solutions for securing MEC environments – cloud security – integrating 5G with cloud services – security considerations for cloud-based 5G applications.

g) Course Content

UNIT I FUNDAMENTALS OF 6G

Need for 6G – requirements and metrics: requirements and KPI targets of 6G – performance metrics – 6G use cases – 6G enabling technologies: novel wireless paradigms and frequencies above 100 GHz – multi-dimensional network architectures.

UNIT II PHYSICAL LAYER

Role of PHY layer in 6G – 6G PHY at terahertz (THz) band – artificial intelligence / machine learning in 6G PHY: hardware architectures for AI in radio – security issues at 6G PHY – physical layer design challenges in reconfigurable intelligent surface aided 6G (Qualitative Treatment only).

UNIT III TRANSPORT LAYER AND MACHINE TYPE COMMUNICATIONS

Mobility challenges in TCP – achieving TBPS bitrate in TCP – other challenges in TCP – machine type communications in 6G: MTC applications and devices – medium access and network architecture for 6G MTC.

UNIT IV CLOUDNET

6G CloudNet:5G and beyond networks – trends towards intelligent-based optimized networks – potential technology transformation for 6G: artificial intelligence exploitation – new spectrum band exploitation – network architectures and technologies.

UNIT V APPLICATIONS OF 6G

Super-smart society – extended reality – connected robotics and autonomous systems – wireless braincomputer interactions – haptic communication – smart healthcare and biomedical communication.

g) Course Content

UNIT I SEMICONDUCTOR STRUCTURE

Electronics – Atomic structure – Structure of elements –Energy of an electron – Valence electrons – Free electrons - Voltage source – Constant voltage source – Constant current source – Theorem and its equivalent circuit: Thevenin, Norton.

UNIT II ELECTRON EMISSION

Electron emission – Types of electron emission – Thermionic emission – Thermionic emitter – Commonly used thermionic emitters – Cathode construction – Field emission – Secondary emission – Photo electric emission.

UNIT III SEMICONDUCTOR PHYSICS

Semiconductor - Bonds in semiconductor - Crystals – Commonly used semiconductor – Energy band description of semiconductors – Effect of temperature on semiconductors – Hole current- Intrinsic and extrinsic semiconductor: types and properties.

UNIT IV PN JUNCTION DIODE

PN diode - Forward and reverse bias – I-V characteristics: diode equation, breakdown voltage, diode equivalent circuit – Applications: clipper, clamper, half wave, full wave, bride rectifier - Zener diode - Forward and reverse bias – I-V characteristics - Zener diode as voltage regulator.

UNIT V BIPOLAR JUNCTION TRANSISTOR

Construction of transistor – Biasing – Operation of NPN and PNP: voltage and current relations - Transistor connections: CB, CE and CC configurations, input, output characteristics, current gain and its relation – Comparison and applications - Transistor as an amplifier.

g) Course Content

UNIT I FUNDAMENTALS OF SEMICONDUCTOR FABRICATION

Semiconductor process technology: Semiconductor technologies and trends, Basic fabrication steps - Characterization and evaluation of crystals - wafer preparation - wafer shaping and wet chemical etching techniques.

UNIT II DIFFUSION

Basic Diffusion process: Diffusion equation and profiles - Evaluation of diffused layers, Extrinsic diffusion: concentration dependent diffusivity - Lateral diffusion.

UNIT III ION IMPLANTATION AND DEPOSITION

Ion implantation: Implantation damage and annealing - Implantation processes: multiple implantation and Masking - Deposition requirements and techniques: physical and chemical vapor deposition.

UNIT IV EPITAXIAL GROWTH AND OXIDATION

Epitaxial growth techniques: vapor deposition - Defects in epitaxial growth - Dielectric deposition: Silicon dioxide - Polysilicon deposition - Thermal oxidation process: Kinetics of growth - thin oxide growth.

UNIT V PHOTOLITHOGRAPHY AND ETCHING

Introduction to optical lithography: exposure tools – masks - photo resist - pattern transfer - Lithographic methods: e-beam lithography, dry and wet etching - Plasma etching - Reactive plasma etching techniques and equipment - applications.

g) Course Content

UNIT I CMOS VLSI CIRCUITS

MOS transistor theory- Long channel I-V characteristics – C-V characteristics – Non ideal I-V effects – DC characteristics: static CMOS invertor, beta ratio effects, noise margin, pass transistor – Circuit pitfalls.

UNIT II CMOS TRADEOFF

Delay: timing optimization, transient response – RC delay model – Logical effort on path-Power: dynamic and static – Interconnect modelling: skin effect, temperature dependence -Scaling.

UNIT III POST CMOS ELECTRONICS MATERIAL

Carbon nano tube field effect transistors (CNTFETs): material view, properties and limitations - Grapheme and other 2D materials, spintronics: fundamental phenomenon, materials - spintronic devices - magnetic tunnel junctions - Ferroelectric FETs (FeFETs).

UNIT IV POST CMOS ELECTRONICS- ARCHITECTURES

FinFETs and Gate all around FETs (GAAFETs): operation, fabrication techniques and challenges, advantages over planar transistors, Tunnel FETs (TFETs): operating principles, band-to-band tunneling mechanism - Design and fabrication challenges - Applications in low power electronics.

UNIT V MODELLING OF POST-CMOS ELECTRONICS

Importance of modeling in device design and optimization - Analytical models: FinFETs, GAAFETs, TFETs, negative capacitance FETs, memristors, resistive RAM - Numerical simulation techniques.

10212EC192	SEMICONDUCTOR PACKAGING	3	0	0	3

Program Elective

b) Preamble

This course provides the fundamental and advanced concepts in the field of electronics packaging. It also describes the testing and reliability of packaging and provides the knowledge on recent electronic packaging technologies.

c) Prerequisite

Nil

d) Related Courses

Advanced Semiconductor Devices

e) Course Outcomes

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Explain the basic principles of electronic packaging.	K2
CO2	Outline the selection of material and issues in electrical connection.	K2
CO3	Illustrate the chip level packaging and their significance.	K2
CO4	Extend the knowledge in packaging technology and thermal design.	K2
CO5	Infer the various packaging electrical issues and testing process.	K2

g) Course Content

UNIT I FUNDAMENTALS OF ELECTRONIC SYSTEMS PACKAGING

Introduction - Functions of electronic packaging, packaging hierarchy, IC packaging: MEMS packaging, consumer electronics packaging, medical electronics packaging - Trends and challenges, driving forces on packaging technology.

UNIT II MICRO ELECTRONIC PACKAGING

Materials for microelectronic packaging - substrates - encapsulants - interconnects - Packaging issues- Packaging material properties: ceramics, polymers, and metals in packaging, material for high density interconnect substrates.

UNIT III CHIP LEVEL PACKAGING

IC assembly: purpose, requirements, technologies, flip chip - Wafer level packaging: reliability, burn – in and test - Single chip packaging: functions, materials processes – Multi-chip packaging: types, design, comparison, trends - System-In-Package (SIP) - Passives.

UNIT IV PACKAGING TECHNOLOGY AND THERMAL DESIGN

Printed wiring boards technology - Surface mount technology - Thermal mismatch in packages - thermal design consideration in system packaging - electrical modeling of a through silicon via - power distribution - return path discontinuities and thermal management.

UNIT V ELECTRICAL ISSUES AND TESTING

Enhance the reliability and performance: packaging material issues - Electrical design: Packaging roadmaps – Failures - Electrical issue: signal distribution, power distribution, electromagnetic interference and RF issues - Electrical testing: system level electrical testing, interconnection tests, active circuit testing, design for testability

g) Course Content

UNIT I FUNDAMENTALS OF TEST AND DESIGN

Need for testing - testing during VLSI lifecycle - challenges in testing - types of simulation: compiled code and event driven - VLSI testing equipment and economics - observability and controllability - fault coverage.

UNIT II FAULT MODELLING

Logic fault models: stuck-at-fault, transition fault, open and short faults - single versus multiple fault model - fault detection and redundancy- fault equivalence and fault location.

UNIT III TEST GENERATION

Automated Test Pattern Generation (ATPG) for combinational circuits: D algorithm, Path-Oriented Decision Making (PODEM) - ATPG for sequential circuits: time frame expansion and multiple clocks.

UNIT IV DESIGN FOR TESTABILITY

Testability trade-offs - ad hoc design for testability - scan cell design - scan architectures - scan design flow - board level and system level DFT approaches -boundary scan standards.

UNIT V BUILT-IN SELF-TEST (BIST)

BIST test pattern generation - BIST architectures: LSSD On-Chip Self-Test (LOCST), Built-In Logic Block Observer (BILBO)- Memory BIST: RAM BIST compiler.

g) Course Content

UNIT I IRREVERSIBLE LOGIC DESIGN

Overview of MOSFET- CMOS - Design of basic and universal logic gates, pass transistor, AOI gates, transmission gate, dynamic gates - Stick diagram: NAND, NOR - Static and dynamic power dissipation.

UNIT II FUNDAMENTALS OF QUANTUM COMPUTING

Basics of quantum computing – Principles of quantum mechanics in VLSI – need for quantum computing– Relationship between reversible and quantum logic – Qubits and operators: entanglement and superposition.

UNIT III QUANTUM GATES

Introduction to Quantum Gates: Single Qubit Gates, Quantum Not Gate, Reversible gates: Pauli-X, Y and Z, Hadamard, Phase Gate - Multiple Qubit Gates: controlled gate, controlled Not, swap - Ancilla inputs- Garbage outputs.

UNIT IV QUANTUM CIRCUITS

Quantum circuits: quantum teleportation, measurement and interference, quantum dots, quantum wells, general unitary transformations, dirac formalism, superposition of states, quantum circuit composition - Quantum cost.

UNIT V INTEGRATING QUANTUM MECHANICS INTO VLSI

Computational problems - Comparison with classical computing: quantum decoherence, error correction, Fault Tolerance - Classical computation - Efficiency: area, power, delay, depth, complexity.

g) Course Content

UNIT I SEMICONDUCTOR MATERIALS AND LED MECHANISM

Semiconductor materials for optoelectronic devices - radiative and non-radiative recombination mechanisms - Light Emitting Diodes (LEDs): light emitting materials, device structure, spectral characteristics and applications.

UNIT II LASER DYNAMICS

Spontaneous and stimulated emission - absorption and amplification of light in a medium - population inversion and threshold condition for a laser - semiconductor laser: structure, materials, device characteristics.

UNIT III OPTO ELECTRONIC DETECTORS

Materials for optical detectors - photocurrent generation in PN diodes - photo detectors: PIN photo detector - avalanche photo detector - quantum well inter sub-band detector - chemiluminescence.

UNIT IV PHOTOVOLTAIC CELLS

Energy consumption and solar energy - photovoltaic effect and its application - development of solar cells - characteristics of solar cells: photocurrent and quantum efficiency - application of solar cells.

UNIT V SEMICONDUCTOR MATERIALS FOR PHOTOVOLTAIC CELLS 9

Solar cell structure - inherent limits of thin-film photovoltaics - semiconductor materials for solar cells: $Cu_2ZnSn(S,Se)$ related materials -solar cell characterization.

UNIT I FUNDAMENTALS OF ROBOTICS

Brief history- Types of industrial robots-Robot classifications and specifications- Cartesian, Cylindrical, Spherical Work Envelope, Types of joints, Prismatic, Revolute, Ball and socket, Number of Axes, Degree of freedom, Joint variables.

UNIT II **ROBOTIC VISION SYSTEM**

Robotic vision systems, image representation, object recognition and categorization, depth measurement, image data compression, visual inspection, software considerations.

UNIT III **MATERIAL HANDLING**

Concepts of material handling, principles and considerations in material handling systems design, conventional material handling systems - industrial trucks, monorails, rail guided vehicles, conveyor systems, cranes and hoists, advanced material handling systems, automated guided vehicle systems, automated storage and retrieval systems(ASRS), bar code technology, radio frequency identification technology

END EFFECTORS UNIT IV

Gripper force analysis and gripper design, design of multiple degrees of freedom, active and passive grippers. Selection of Robot: Factors influencing the choice of a robot, robot performance testing, Impact of robot on industry and society.

UNIT V APPLICATIONS OF ROBOTICS 10

Application of Robots in continuous arc welding, Spot welding, Spray painting, assembly operation, cleaning, robot for underwater applications.

9

UNIT II WEARABLE INERTIAL SENSORS

Wearable Inertial Sensors - Accelerometers, Gyroscopic sensors and Magnetic sensors; Modality of Measurement- Wearable Sensors, Invisible Sensors, In-Shoe Force and Pressure Measurement; Applications: Fall Risk Assessment, Fall Detection, Gait Analysis, Quantitative Evaluation of Hemiplegic and Parkinson's Disease patients. Physical Activity monitoring: Human Kinetics, Cardiac Activity, Energy Expenditure measurement: Pedometers, Actigraphs.

UNIT III WEARABLE DEVICES FOR HEALTH CARE

Wearable ECG devices: Basics of ECG and its design, Electrodes and the Electrode–Skin Interface; Wearable EEG devices: Principle and origin of EEG, Basic Measurement set-up, electrodes and instrumentation; Wearable EMG devices: EMG/ SEMG Signals, EMG Measurement – wearable surface electrodes, SEMG Signal Conditioning, Epidermal Electronics Systems. Wearable Blood Pressure (BP) Measurement, Body Temperature sensor.

UNIT IV OTHER WEARABLE SENSORS

Wearable devices with Global Positioning System (GPS) integration for tracking and navigation. Wearable Optical Sensors -chemical sensors, optical glucose sensors, UV exposure
indicators, speech recognition using lasers; Photoplethysmography (PPG), 3D imaging and motion capture.

UNIT V SCOPE OF WEARABLE DEVICES

Role of Wearable sensors, Attributes of Wearable sensors, The Meta Wearables – Textiles and clothing, Social Aspects: Interpretation of Aesthetics, Adoption of Innovation, On-Body Interaction; Case Study: Google Glass, health monitoring, Wearable: Challenges and Opportunities, Future and Research Roadmap.

Open Elective

b) Preamble

This course addresses the fundamentals of wireless communication and provides an overview of existing and emerging wireless communications networks. It covers radio propagation and fading models, fundamentals of cellular communications, multiple access technologies, and various wireless networks, including past and future generation networks

c) Prerequisite

Nil

d) Related Courses

Network Management, Network Security

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Infer the radio signal propagation models and its impact on communication system performance.	K2
CO2	Explain the multiple access schemes based on reservation and random-access methods for Wi-Fi	K2
CO3	Relate the fundamentals of cellular communication and its related services as GSM and UMTS.	K2
CO4	Outline the concepts of packet switching cellular system.	K2
CO5	Summarize the concept of mobility management and WPAN	K2

g) Course Content

UNIT I OVERVIEW AND BASIS OF WIRELESS CHANNELS AND COMMUNICATION

9

Review of Digital Communications-Cellular Systems from 1G to 3G-Wireless 4G Systems-Components of a Wireless Transmitter and Receiver–Bandwidth, Duplexing, Licensed and Unlicensed Bands-Power, Rate and SNR-Shannon's Capacity, Bandwidth and Power Limited Regimes - Radio Propagation and Propagation Path-Loss Model: Free-Space Attenuation, Multipath Channel Characteristics, Signal Fading Statistics, Path-Loss Models.

UNIT II RANDOM ACCESS SYSTEMS AND WIFI

Types of Multiplexing: Fixed Assignment vs. Statistical Multiplexing - Aloha, Slotted Aloha - Review of Poisson Process and Analysis of Aloha CSMA with Collision Avoidance and Collision Detection-WIFI: History and Motivation, Architecture-DCF Mode, RTS, CTS, Hidden and Exposed Terminal Problem- 802.11n Enhancements

UNIT III CIRCUIT-SWITCHED CELLULAR SYSTEMS

Cellular Concept and Spatial Reuse – Interference Limited and Coverage Limited Systems – Frequency Reuse - Cellular vs. WIFI - GSM: Architecture, Voice Support – UMTS: Basics of CDMA, Architecture and Key Channels.

UNIT IV PACKET-SWITCHED CELLULAR SYSTEMS

Packet Switched vs. Circuit-Switched Communication - HSDPA (High Speed Downlink Packet Access) -HSUPA (High Speed Uplink Packet Access) - Introduction to LTE: History, Architecture - OFDM- Uplink and Downlink Communication in LTE

9

9

UNIT V MOBILITY AND WPANS

Principles of Handovers: Switching Conditions, Hysteresis, Detection - Mobility in Cellular Systems: The Gateway Concept, Measurement Reports, Mobility Procedures- Mobile IP: Basic Components, Tunneling, Enhancements for Mobile Ipv6-Wireless Personal Area Networks (PANS): Bluetooth80215.1, Zigbee802.15.4.

g) Course Content

UNIT I CLASSIFICATION OF SIGNALS AND SYSTEMS

Standard signals: Step, Ramp, Pulse, Impulse, Real and complex exponentials, Sinusoids - Classification of signals: Continuous time (CT) and Discrete Time (DT) signals, Periodic and Aperiodic signals, Deterministic and Random signals, Energy and Power signals - Classification of systems: CT systems and DT systems, Linear and Nonlinear, Time-variant and Time-invariant, Causal and Non-causal, Stable and Unstable.

UNIT II CONTINUOUS TIME SIGNAL ANALYSIS

Fourier series for periodic signals: Trigonometric Fourier series, Exponential Fourier Series - Fourier Transform, Inverse Fourier Transform, Properties of Fourier Transform.

UNIT III LINEAR TIME INVARIANT CONTINUOUS TIME SYSTEMS

Impulse response - Convolution integral - Differential Equation - Fourier transforms in analysis of CT systems - Systems connected in series/parallel.

UNIT IV DISCRETE TIME SIGNALS AND SYSTEMS

Base band signal sampling – Fourier Transform of discrete time signals (DTFT) and Properties - Z-Transform and Properties - Analysis of DT systems using Z-Transform.

Course Content g)

UNIT I FUNDAMENTALS OF DIGITAL IMAGE

Introduction -Steps in Digital Image Processing - Components - Elements of Visual Perception - Image Sensing and Acquisition - Image Sampling and Quantization Relationships between pixels – color models.

UNIT II IMAGE TRANSFORMS

2 – D Discrete Fourier Transform, Discrete Cosine Transform (DCT), KL Transform, Walsh Transform, Walsh Transform, Hadamard Transform, Discrete Wavelet transform, Singular Value Decomposition

IMAGE ENHANCEMENT UNIT III

Spatial Domain: Basic relationship between pixels- Basic Gray level Transformations -Histogram Processing - Smoothing spatial filters- Sharpening spatial filters. Frequency Domain: Smoothing frequency domain filters- sharpening frequency domain filters Homomorphic filtering, applications of image enhancement.

UNIT IV IMAGE SEGMENTATION

Introduction to image segmentation, Point, Line and Edge Detection, thresholding, Region based segmentation, clustering techniques, Edge based segmentation, Edge detection and linking, applications of image segmentation

UNIT V **IMAGE COMPRESSION**

Need for image compression, Redundancy in images, Classification of redundancy in images, Classification of image compression schemes, Run length coding, Shannon - Fano coding, Huffman coding, Arithmetic coding, compression standards, applications of image compression

g) Course Content

UNIT I INTRODUCTION TO CPLDS

Introduction to PLDs- PLA, PAL, PROM, CPLD-Architectures, Basic concepts - Macrocell Architecture, Logic array, programmable flip-flops, programmable clock, I/O control block, MAX product family and FLEX Architecture

UNIT II INTRODUCTION TO FPGAS

Commercial FPGAs- programming technologies, Xilinx, Actel, Altera, plessy, plus logic, AMD, quick logic, algotronix, Concurrent logic, Crosspoint Solutions, Design flow

UNIT III INTRODUCTION TO HARDWARE DESCRIPTION LANGUAGE

Introduction to Verilog - Structural, Dataflow and Behavioral modeling, modeling of combinational logic circuits (Basic Gates, Buffer, Adder, Subtractor, Encoder, and Decoder), modeling of sequential logic circuits (D and T Flip Flops).

UNIT IV FINITE STATE MACHINES

Top down Approach to Design, State diagram, State Transition Table, State assignments for FPGAs, Case study Mealy & Moore Machines, Pipelining, FSM issues-Starring state, Power on Reset, State diagram optimization, fault Tolerance

UNIT V SYSTEM LEVEL DESIGN

Controller, data path and functional partitions, Parallel adder, Multiplexer's, sequential circuitscounters, Shift Register, FPGA Applications

g) Course Content

UNIT I FUNDAMENTALS OF INTELLIGENT TRANSPORTATION SYSTEMS

Introduction to ITS, Historical Context of ITS - Roles and Responsibilities - Types of ITS -Functionality and Business Models - Benefits of ITS - Importance of Telecommunications in the ITS - Information Management, Traffic Management Schemes

UNIT II HARDWARE AND DATA NECESSITIES OF ITS

Application of Sensors in Traffic management – Traffic Prediction Systems; Transponders and Communication systems - Data Management Centres - Elements of Vehicle Location and Route Navigation - ITS Data Collection Techniques – Detectors, Automatic Vehicle Location (AVL), Automatic Vehicle Identification (AVI), GIS, Video Data Collection.

UNIT III ITS USER REQUIREMENTS AND AMENITIES

Advanced Traffic Management Systems (ATMS), Advanced Traveller Information Systems (ATIS), Commercial Vehicle Operations (CVO), Advanced Vehicle Control Systems (AVCS), Advanced Public Transportation Systems (APTS), Advanced Rural Transportation Systems (ARTS)

UNIT IV ITS PLANNING AND DEPLOYMENT

ITS Models and Evaluation Methods - Planning and Human Factor issues for ITS - Case Studies on Deployment Planning - System Design and Operation of ITS – ITS Safety and Security, Current Researches in ITS, Development and Business models of ITS

UNIT V APPLICATIONS

Traffic and Incident Management Systems - Travel Demand Management - Electronic Toll Collection - ITS and Road Pricing - Transportation Network Operations - Commercial Vehicle Operations and Intermodal Carriage - Public Transportation Applications - ITS

9

Open Elective

b) Preamble

Wireless communication is a broad term that incorporates all procedures and forms of connecting and communicating between two or more devices using a wireless signal through wireless communication technologies and devices. This course focuses on the fundamental concepts of mobile communication, various propagation models, signaling schemes and recent trends in wireless communication.

c) Prerequisite

Nil

d) Related Courses

Wireless Networks

e) Course Outcomes

Upon the successful completion of the course, students will be able to

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Describe the evolution of wireless communication systems.	K2
CO2	Discuss a cellular system based on resource availability and traffic demands.	K2
CO3	Characterize a wireless channel and distinguish various signalling schemes.	K2
CO4	Interpret the 5G cellular concepts and the techniques used to increase the data rate and capacity.	K2
CO5	Explain the recent trends in wireless communication and resource management	K2

g) Course Content

UNIT I INTRODUCTION TO WIRELESS COMMUNICATION SYSTEM 9

Evolution of mobile communications - Types of wireless communication systems - Comparison of common mobile radio systems- Trends in cellular radio and personal communication – An overview on generations of wireless technology: 1G, 2G, 3G, 4G/ LTE

UNIT II CELLULAR SYSTEM DESIGN FUNDAMENTALS

Cellular system- hexagonal geometry cell and concept of frequency reuse- Channel assignment strategies - Handoff Strategies: Types of Handoffs, Prioritizing Handoff- Interference and system capacity: Co- channel and adjacent interference, Umbrella cell concept, Trunking and Grade of service - Improving coverage & capacity in cellular system: Cell splitting, Cell sectoring, Repeaters, Micro cell zone concept.

UNIT III MOBILE RADIO PROPAGATION AND SIGNAL TRANSMISSION 9

Signal Propagation: Basic propagation mechanisms, path loss, multipath propagation, fading effects –Modulation Techniques: Offset-QPSK, MSK, GMSK - Multicarrier modulation – Spread spectrum: DSSS, FHSS- Multiple Access techniques: FDMA, TDMA, CDMA

UNIT IV 5G SYSTEM CONCEPTS

5G concept overview –Millimeter wave communication- Extreme mobile broadband: Multiple antenna systems (MIMO), Beamforming, Spatial diversity - 5G architecture: Basics about 5G RAN, High level requirement, physical architecture and 5G deployment -5G waveform :OFDM- NOMA

9

UNIT V RECENT TRENDS IN WIRELESS COMMUNICATION

Machine type communication: Fundamental techniques, massive MTC, V2X communication - D2D communication :4G to 5G Research challenges, Radio resource management for mobile broadband D2D, RRM and system design for D2D, Power control and Mode selection.

b) Preamble

This course discusses the features, programming and applications of Programmable Logic Devices. The students shall emphasize the VLSI architectures such as Xilinx, Actel, Altera, plessy, plus logic, AMD, quick logic, algotronic Concurrent logic, technology mapping and design flow. This course introduce the Verilog HDL using data flow, behavioral and structural modeling. It also provides VLSI system design experience using FSM.

c) **Prerequisite**

Nil

d) Related Courses

Reconfigurable Computing with FPGA

e) Course Outcomes

Upon the successful completion of the course, students will be able to:

CO Nos.	Course Outcomes	Knowledge Level (Based on Revised Bloom's Taxonomy)
CO1	Illustrate the features of programmable logic devices and CPLD	K2
CO2	Summarize the various FPGA architectures, technology mapping, design flow and one hot encoding.	K2
CO3	Develop the combinational and sequential circuits using hardware description language	К3
CO4	Interpret the state assignments for FPGAs and FSM.	K2
CO5	Relate the VLSI system design using FPGA	K2

Course Content g)

UNIT I COMPLEX PROGRAMMABLE LOGIC DEVICES

Introduction to PLDs - PLA, PAL, PROM, CPLD-Architectures, Basic concepts - Macrocell Architecture, Logic array, programmable flip-flops, programmable clock, I/O control block, MAX product family and FLEX Architecture

UNIT II FIELD PROGRAMMABLE GATE ARRAY

Commercial FPGAs- programming technologies, Xilinx, Actel, Altera, plessy, plus logic, AMD, quick logic, algotronix, Concurrent logic, Cross point Solutions, Design flow

UNIT III HARDWARE DESCRIPTION LANGUAGE

Introduction to Verilog- Structural, Dataflow and Behavioral modeling, modeling of combinational logic circuits - Basic Gates, Buffer, Adder, Subtractor, Encoder, and Decoder, modeling of sequential logic circuits - D and T Flip Flops.

UNIT IV **FINITE STATE MACHINES**

Top down Approach to Design, State diagram, State Transition Table, State assignments for FPGAs, Mealy and Moore Machines, Pipelining, FSM issues-Starring state, State diagram optimization

UNIT V SYSTEM LEVEL DESIGN

Controller, data path and functional partitions, Parallel adder, Multiplexer's, Sequential circuits-Counters, Shift Register, FPGA Applications

Course Content g)

UNIT I FUNDAMENTALS OF EMBEDDED SYSTEMS

Embedded system definition, classification of embedded system, embedded system design process, reset circuits.

UNIT II MICROCONTROLLER

Difference between microprocessor and microcontroller, Overview of the architecture of 8051 microcontroller, Memory organization, and special function registers, Addressing Modes, Instruction formats, Instruction set, Interrupt and Interrupt routines, I/O Ports, Assembly Language programming.

UNIT III INTERFACING PERIPHERALS USING EMBEDDED C 10

Embedded C Programming structure, logical operations, IO programming, delay programming, timer and counter programming, serial port programming, LCD interfacing, and keypad interfacing.

UNIT IV COMMUNICATION PROTOCOL

Communication Basics, Serial communication protocols: UART, RS232, RS485, SPI, USB, Introduction to I2C and CAN.

UNIT V APPLICATIONS

Smart Agriculture System, Intelligent Transportation Systems Autonomous Drone Navigation System.

UNIT I FUNDAMENTALS OF MEASUREMENT SYSTEMS

Basics of Measurement – Classification of errors – Error analysis – Static and dynamic characteristics of transducers – Performance measures of sensors – Classification of sensors – Sensor calibration techniques – Sensor Output Signal Types.

9

9

9

9

UNIT II MOTION, PROXIMITY AND RANGING SENSORS

Motion Sensors – Potentiometers, Resolver, Encoders – Optical, Magnetic, Inductive, Capacitive, LVDT – RVDT – Synchro – Microsyn, Accelerometer, Range Sensors – RF beacons, Ultrasonic Ranging, Reflective beacons, Laser Range Sensor (LIDAR).

UNIT III FORCE, MAGNETIC AND HEADING SENSORS

Strain Gage, Load Cell, Magnetic Sensors –types, principle, requirement and advantages: Magneto resistive – Hall Effect – Current sensor Heading Sensors – Compass, Gyroscope, Inclinometers.

UNIT IV OPTICAL, PRESSURE AND TEMPERATURE SENSORS

Photo conductive cell, photo voltaic, Photo resistive, Fiber optic sensors – Pressure – Diaphragm, Bellows, Piezoelectric – Tactile sensors, Temperature – IC, Thermistor, RTD, Thermocouple. Acoustic Sensors – flow and level measurement, Radiation Sensors – Smart Sensors – Film sensor, MEMS & Nano Sensors, LASER sensors.
UNIT V ADVANCED TRANSDUCERS

Energy harvesting transducers- Hall Effect transducer - Magneto resistor -Digital displacement transducer- Fiber optic sensor - Introduction to SQUID sensor, Hyper spectral sensor, Touch screen sensor, Smart Transducer.
